The crowd knows his opinions are VERY special.
Ask Nashville Joe.
Ask Bro. Lawrence.

Here's an idea for your talk show:

You go to Mem-Town and visit with the "sistahs". You know .. like profit Stair did. An undercover assignment - no pun intended.

Then report about it on your talk show.

Tell us about what it was like being treated like a profit. By TaMeka and RaSheka and LaReka and MaWanda and LaTanda and RaShanda.

TV news are toast! The subject content is never in depth and almost always leaves out critical facts, details. Even FOX news is inadequate.

The unfortunate situation is that the vast majority of the American public has no time to READ! Dual income families and shuttling the kids to and fro after school activities makes the 30 minute news program the limit of info consumption.

It is the fortune few who have the time and wits to search the internet for alternative in-depth coverage. The only exception to good domestic current event news on the air is John Bachelor of WABC radio 770KHz (M-F @10PM EST) in New York City - superb in-depth current event coverage. I also enjoy WGN radio 720KHz (M-F @10PM EST) in Chicago for a wide range of in depth subjects.

I turn the TV off with just a few exceptions.

Source record: 9494

The memory functions on the 909 are outstanding. Aside from that, it's performance leaves alot to be desired. It's good that someone has figured out a way to make it perform a little more respectably. I would think instead of dumping cold-cash into one of these prima-donnas, the thing to do would be to buy a satellit 800. Darren

With such logic why not hand over the entire U.S. government to the foreign
intelligence services.
Intelligence is to be provided to individuals on a "NEED TO KNOW" basis.
I bestow trust in my elected officials and military to uphold the security
of sensitive intelligence for
the sake of national security. If those elected officials fail in that
trust it is my duty to
elect someone who will. I don't trust so called third party "independent"
organizations
with links and funding from dubious sources - including left wing and
communist leanings.

>
> You sir, are the Antiamerican one.

Well, here it is, (0:00 UTC Tuesday) and I thought I'd kill the time before Radio Netherlands finishes the news with a rerun of the start of Radio Australia's "The Science Show". Huh, what the heck is "In The Loop".

OOOOPS. They just made some rather major changes to their schedule. (As of Monday, Feb. 28).

The major one, as far at this newsgroup is concerned, is that 'The Planet', the music show that used to be on at 13:00 has gone off shortwave. As has "Bush Telegraph", a rural affairs show.

And the 00:00 hour long current events/and or science shows are now at 04:00 and the half hour "reports" are moved from 1:30 to 3:30. Which may be ok in the summer, but for the North America winter, will take them out of hearing, at least for that time slot. There's usually at least one repeat of most shows, but...

It looks like dropping some third repeats of serious stuff for some froth, like "In the Loop", and "Saturday Night Country".

If YS has been ID'ed as a Pirate, could you provide post
a URL link to the story? I would be very interested to read this.

Here is another VERY curious Blog thread on YS - one that perhaps
sheds some light on the mysterious data burst heard at the
beginning of his transmissions. Check it out below!

I'm listening around 0300 on 5975 and 9525 khz. I keep getting a racket
on 9525 that drowns out the BBC that must be coming from somewhere in my
immediate vicinity. Someone suggested dimmer switches, and while I don't
have any I can't speak for any of the neighbors. 5975 seems to come in
good, although it has a level of noise that makes it necessary to listen
with SSB. I'm located in Sacramento, California, about 90 miles inland
from San Francisco. I'm using a FRG-8800 with about 50 feet of wire. I
haven't tried any of BBC's other streams. Maybe I'll do that tonight.

11. Radio Havana on 11705?

Newsgroup: rec.radio.shortwave

I was listening to the start of Radio Havana's second hour at 0200 on 9820 when they announced three frequencies: 6000, 9820 and what sounded like 11705. Passport doesn't have them listed on 11705 at 0200. I tuned there but all I heard was a carrier. Has anybody heard them on 11705 after 0100 nights local time in North America?

I couldn't memorize 1 wpm of Morse code in the Boy Scouts, doubt that it is going to happen 35 years later ;-) I'm on the air for the USCG and they don't care if we know code or not. A smaller and smaller number of older chiefs and officers who were hams for a hundred years still know code in the guard - not much interest in it or radio in general by younger generations, even when they operate them for a living. Computer networking is what drives the communication business today, the radios themselves seem a small, mostly forgotten part of it.

Sorry to have gotten off-topic with the longwire - for listening it is certainly the most forgiving of any configuration imaginable.

Jack

Source record: 9500

As a general rule it is a really BAD idea to intrude onto ANY frequency assigned to hams. We are somewhat protective of our shrinking radio spectrum and will defend it strongly.
As an example, in 1980 or 81 the "Greatfull Dead" gave a concert in Rupp Arena. Too bad for them their roadies used 70cM ham HTs to communicate.
Within minutes they where warned to leave the 70cM hamm band. They laughed at the hams. A really dumb idea. Every ham in the area with 70cM
radios joined in the fun. We held an series of nets. As the roadies tried to switch freqs we followed. The concert started very late. They had to borrow HTs from security to get anything done.
Were our actions illegal jamming?
No.
The intruders had no rights.
If this had been a life or death stituation, hams would have gladly helped. Around the same time a young lady had her boyfriends HT to listen to the gang. About 11:00PM she came on and said she felt "real bad" and couldn't get off the couch to reach the telephone to call 911. We instantly brought up the 911 autopatch, had her explain the situation. EMS was dispatched and her boy friend was told to head for the hospital to meet her. The surgeons removed her apendix and nothing was said about her "illegal" use of
her boy friend's HT. Because it wasn't illegal.
Set up shop on any ham frequency at your own risk.
It might take them a while to locate you.
But keep in mind that a lot of hams love to find low powered, and sometimes mobile, foxes with transmitters. Compared to the task of tracking down a fox, an idiot running a stationary high powered signal is hunting in a baited field.
As another exaple we had a stranger show up on the 76 repeater one afternoon. Trying to chat with the female IDer. It was clear that he wasn't a ham, and likely had a stolen rig. We adopted CB handles, but IDed every 10 minutes with our call letters. This brain trust even agreed to meet wtih some of us. A cop who was also a ham joined the party. After some converstion the idoit offered to sell us the "funny" CB. He brought it in, and it had a set of call letters engraved. A quick check of the Callbook gave us the owners address. The cop was able to get his dispatch to track the owner down. And sure enough the rig had been stolen. His police faxed a copy of the report and the cop arrested the idiot. And when the searched the car they found a lot of loot. The theif went away for a long time. Transporting stolen guns and

a trunk full of weed across state lines is a really, extremely bad
idea.
Don't mess with hams unless you are very smart.
Or want to have the FCC visit you some night.
Terry

Jackie Patru with Sweet Liberty is back on at her regular time - 9:00 PM EST / 02:00 UTC on WWCR 5070 KHz. I believe last week when I heard Pastor Peters on her time slot it was on Thursday when Jeff Bennett was already filling her slot. Don't know what the full situation is. Perhaps Pastor Pete was just filling in for Jeff.

I do well with 6005 Africa stream which I think starts at 0500 and also
6135. I also get RN from Sackville nicely on 6165.

I've read about "broadband over powerlines". If I have this right, this is
internet signal on electric wires. Don't know it that has actually started
to happen down there - we're not proposed for that here. We have deeply
buried utilities (water, sewer, electric, phone, cable). They have to put
these down deep enough so that they don't freeze, which means we are well
shielded from interference. These are down about 3 metres or almost 10
feet. One of the few benefits of these long winter nights, though today
was actually great, at about -8C / 18 F. I can tell when my one neighbour
is vacuuming however and running the something else, I think may be a

blender. I may ask and do an experiment....

Well, the most dangerous part of the flight is over = the take off fully loaded with fuel seems successful.
Hope you guys can catch a recording of the flight, as the flightpath lies far from my QTH.
Very exciting!
See BBC http://news.bbc.co.uk/1/hi/sci/tech/4304179.stm
seems one of the most difficult things will be NOT running out of fuel

See also:
http://www.centennialofflight.gov/essay/Explorers_Record_Setters_and_Daredevils/rutan/EX32.htm
I was lucky enough to get a recording of Dick Rutan and Jeanna Yeager in Voyager passing over Central Africa in December 1986 on their world record breaking flight. A very difficult task in those days as technology was nowhere near as advanced as it is today.

Sure hope one of you can get a recording of GlobalFlyer -> let us know if you do

I took my own advice and asked WA5WHN about it via email, and he's being tight-lipped about it, insinuating that the FCC will be doing something about it soon or at least issuing a statement sometime in the future. So ignore what I said, I don't think that Mr. Miller wants any more email about the subject. I guess we'll have to wait & see what comes.

Agreed, stay away from the ham bands if you want to pirate. Frankly, I
don't care what you do outside of the ham bands, as long as you're not
interfering with air traffic control comms or safety-of-life channels. But
you'd better know what you're doing when you set up shop on unauthorized
frequencies.

Which the very fact that this guy was located & shut down negates the whole
"the FCC must be turning a blind eye" theory. My question is why did
someone feel it necessary to put the station on the air in the first place?
Well I suppose the FCC will be asking the same questions.

Our utilities out here were run by morons. No grounds (eventually grounds were put in), cheap materials. RF sources abound. A couple years ago there was an arcing transformer on one of the poles. So I DF it and tell SMUD (local electric company) all about it, and nothing was done because the girl on the phone had no clue what I was talking about. A few months later that transformer blew, plunging the whole area into darkness at 2am.

As for BPL, you're right it's internet on electric "mains" lines. It doesn't work all that well for what it's designed for. The only thing it does well is spew QRM from 80 Mhz on down. So far, this latest attempt to make money hasn't gotten past the test stage. Most other countries have rejected it. And it's unlikely to make any inroads in poor places like Africa, which was the intention. Internet by satellite works much better.

Well again, my question is, what was the purpose? I guess maybe they
thought the lax FCC would never come after them, but they foolishly didn't
count the determination of local hams.

Well KIPM didn't transmit 24 hrs a day, either, and stuck with frequencies around 6955 or thereabouts. He didn't make a nuisance of himself on the ham bands which tends to get the attention of hams, the ARRL, and eventually the FCC.

Tom, the referenced clown did broadcast deliberate interference on two HF
maritime hailing and distress frequencies. That's more felonies to his
credit, and if records show there was distress traffic anywhere during that
time frame, it could get even worse for him.

I'm asking the same thing. What's the point of a bunch of static and
"Varmint, I'm gonna blow ya ta smithereens!" played over and over again
on four frequencies with a specific time delay between the four. What
were they trying to prove? Was this a bunch of high school kids who were
good with computers who decided to pull the equivalent of a hacking
prank?

Below is a link to the FIRST STEP of the new
and improved Un-Doc 3 step De-Programming session.....

Step 1 here ---> http://www.trashfish.com/polyp/songs/wakeupyousheep/

This URL above will link you to a download of a song in .MP3
Please run or better yet save it, then listen for as many times as needed
to be effective. (hot microwave popcorn nearby IS recommended!)

Step 2: http://www.rathergood.com/vid/ (video MP3 link)

Step 3: http://www.rathergood.com/vines/ (video MP3 link)

There--> ALL DONE - YOU'RE FREE MAN !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

:) :) :) :) :) ..and you didn't even have to "Get on the
Telephone" either!!!

Finally be sure to check out: (updated)

"The Divided Kingdom": Monday through Friday at 0400 UTC
on 5.085 Mhz and Saturday at 0300 on 5.085 Shortwave.
Elizabeth Border, this show's host, has assumed the very highest
levels of domestic shortwave radio kookery
with her paranoid conspiracy rantings about the New World Order.
Especially entertaining is her SOCK PUPPET (!) skit featuring dialog
between a falsetto-voiced "Barbie" and a low-voiced "Fatherland Security"
accompanied by downright scary solemn music. This is clearly the most
entertaining program on 5.085 WWRB shortwave and there's something in
it for conspiracy theorists as well as kookologists of all stripes.

Also go to www.coasttocoastam.com for NEW PROGRAMMING.
Just be darn sure to wear a tinfoil hat while listening.

(see http://zapatopi.net/afdb.html for DIY Tinfoil Hat Instructions)

I just saw that Liypn has the Tecsun PL350 for sale. It's $44.90 plus $20 shipping. He has 87 available as of right now.

I almost bought one tonight, but I decided to curb my impulse buying for another day.

My view on Stern and his type going to satellite is: Good-bye, why
are you still here? Maybe all of talk radio will follow as well. I live
near Ocala Fl and there is no decent radio around here. After hurricanes
Frances and especially Jeanne the stations were off the air. No local
news, hardwired telephone service was spotty and the cell system was
almost useless. What did we get when the stations started coming back
on? Silly kids yaking all night long thinking they are funny and bad
reports of where to find ice or water. The next station that came on
mentioned the hurricane and went back to Rush Limbagh. The last thing
people need when they have no power, little food or water is boring
syndicated talk radio. If I was working there I would have pushed to
get as much accurate information as I could to the people who needed
it. What good would Satellite radio be during a disaster? Let them
have the rubbish they deserve. Even though my favorite AM radio station
is on Sirius, I can't, and won't spend a monthly fee like that for one
radio station. FOr the same price I can get broadband internet instead
of dialup and listen to a stream while stuck at home all the time.

Yeh. yeh, yeh...
and by the late 1900s my fifth grade teacher told us we'd all be riding around in air suspension cars. Yawn. This rally 'round the "new technologies" is crap. Few of these things work as well as we are told they do on paper. And those who are most enthused are those who stand to gain financially. Period.
We're all fools to gobble up this gadgetry that rarely works as well as it is touted. It is nothing more than a planned cycle to keep us buying. Take a look at your local thrift store and see what you paid $400 for only ten years ago that is now "obsolete." Yup, we're damned gullible idiots. And those in the "new technologies" business are laughing their asses off at us.

You are doing non standard things in your signature. Please make a small
change to start your sig with --

Most news readers will take the -- as the start of the sig and not make
it part of the reply.

In the past RHC has used this frequency in SSB. I looked it up in this
years Passport and it lists RHC as AM, spanish 11:00 to 15:00 UTC with
100kW to S America.

JIM,

One more thing to consider the difference in the "Spacing"
of the Turns for the Two 'separated' Loops :
.
* AM/MW Loop Antenna can have 'many' Turns and the "Spacing"
of these Wires can be Close Together [Side-by-Side] or with
a Small "Gap" of 1/16" to 3/16" between the turns.
.
* Shortwave Loop Antenna will have a just a few Turns and
can have a greater "Spacing" {Gap} of 3/8" to 3/4" between
the Turns.
.
REF => Loop Antenna Questions :
Paired ? -or- A Pair ? -or- Totally Separate ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2421

The latest version of this file can be found at:
http://www.rdrop.com/users/billmc

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. Also includes WARC-92 broadcast band extensions, which may be used before April 1, 2007 on a secondary (non-interference) basis. For multi-use bands, most common usage is shown. Some stations operate outside the official bands. Information is from Sep 2000 NTIA allocations table, see:
http://www.ntia.doc.gov/osmhome/allochrt.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines usually don't. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to use it for DX work. Nevertheless, I find that it outperforms the telescopic whip antennas built into most portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including ringing, so that they will not harm the receiver.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be purchased from some shortwave dealers.

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

By the way, these filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

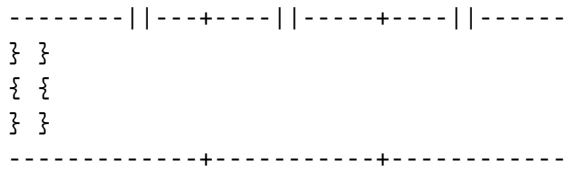
Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)

Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.



The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB
1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

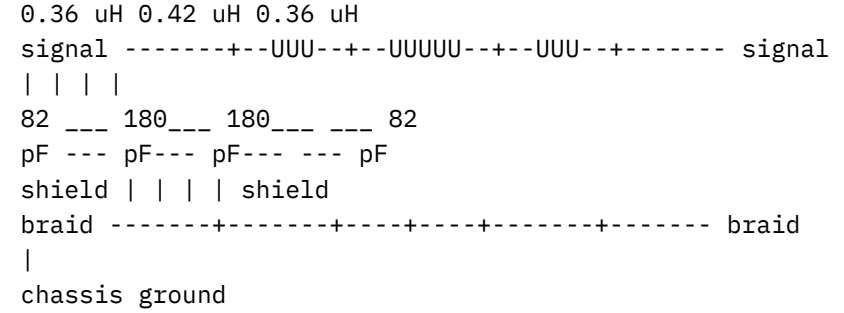
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

All of the parts for the filters can be obtained from the following source:

Digi-Key
http://www.digi-key.com/
701 Brooks Av S
P.O. Box 677
Thief River Falls, MN 56701-0677 USA
Voice: 800-344-4539
FAX: 218-681-3380

PART DIGI-KEY PART NO.
82 pF capacitor P4023
180 pF capacitor P4027
820 pF capacitor P4184
1500 pF capacitor P4187
0.33 uH inductor M8007
0.39 uH inductor M8008
2.7 uH inductor M8018

The cost of these parts is less than $1 each.

Is it racist to quote racists - who are not white?

The following is a cut and paste from someone else. I claim NONE of it but find some of it quite interesting considering that I'll probably called racist for telling you what some jews and blacks have allegedly said. I did NOT confirm each citation, but trust the source from which I obtained this material. YOU have my permission to verify or attempt to disprove any or all of them. There are some white comments as well. :-)

Al

If You See Black...
Don't Go Back!

by Edgar J. Steele

February 27, 2005

"Keep bashing the dead white males, and the live ones, and the females, too, until the social construct known as the white race is destroyed. Not deconstructed, but destroyed."
--- Noel Ignatiev, Jewish Harvard professor and editor of Race Traitor magazine (Washington Times, September 4, 2002)

"The white race is the cancer of human history."
--- Susan Sontag (much-celebrated Jewish "intellectual," whose recent passing was lamented loudly in Jewish circles)

"I donï¿½t care about your idiot children."
--- Willie Brown (Mayor of San Francisco, to a white parent complaining that affirmative action would penalize his children), quoted in The Social Contract (Summer 1998, p. 290)

"It's always illegitimate for white men to organize as white men."
--- William Raspberry (black columnist), Dubiously Exclusive, (Washington Post, Nov. 24, 1995)

"Q: What kind of world do you want to leave to your children?
A: A world in which there aren't any white people. . . ."
--- Leonard Jeffries (chairman of the African-American studies department of the City College of New York), interviewed by T.L. Stanclu and Nisha Mohammed, Rutherford Magazine (May 1995, p. 13)

"You guys have been practicing discrimination for years. Now it is our turn."
--- Black Supreme Court Justice Thurgood Marshall (in a conversation

with Justice William Douglas about racial preferences), quoted by William O. Douglas, The Court Years, 1939-1975 (New York, Random House, 1980)

Enough!

I'm ready to shoot my TV. Honestly. But for my family, I would cancel my satellite subscription (basic package only) outright and live off hand-selected DVDs.

The commercials are bad enough...intolerable, in fact. Perhaps because I catch only the occasional network show, the frequency of commercials seems more overwhelming to me than most. Rent some old TV shows on DVD and see how long the one-hour shows were just twenty years ago (about 53 minutes), versus today (about 40 minutes). That's why there are no half-hour shows anymore - there simply isn't enough time for more than a page or two of lines, once the commercials take their ever-increasing pound of airwaves. But, that isn't the worst of it. That isn't why I've had it. Let me explain.

Picture the Glorp race, residents of a star system some 987 light years from Earth: The Glorps finally construct a device to decode the television signals leaving Earth today. The Glorps of the distant future would be forced to conclude that Earth is a multicultural paradise, with two races living in blissful harmony. The leaders are drawn from the Jewish race, which makes up about 50% of Earth's population, based upon the percentage of Jews visible in all public walks of life. The Glorps would see that virtually everybody else of any consequence is Black, of course, with those Blacks holding the most prestigious positions - after all, today's movies all have Black Generals and Presidents and heroes of every stripe.

But the Glorps would see another race, too, because the villains always are vapid and ruthless Whites. In fact, Glorps might well wonder why Earth's Whites have been allowed to live, given that we seem to be nothing but a drain upon society. Incidentally, though we all know that TV does not reflect reality in many respects, Whites are being exterminated, just in case you truly haven't noticed. And Jews are running things. The one thing so dreadfully different from TV, of course, is the Black reality.

TV Blacks are smart, friendly, athletic, beautiful (with those never-mentioned White-caste genes everpresent), retiring, wise, helpful and in charge. Real-life Blacks tend to be stupid, hostile, lazy, fat, mean, demanding and in jail. Oh, give me a break! Don't even begin to try to tell me it isn't true! I really have no patience left for White people who deny the reality surrounding us all.

And it has nothing to do with racial "equality," either. Otherwise, where on TV and in the Movies are all the beautiful, wise and worldly Chinese, East Indians, Japanese, Russians, Serbs, Arabs, Eskimos, American Indians and so on? Why does affirmative action in the media

always excessively favor just Blacks? And why do Jews seem never to have to give ground, leaving that chore to the other White meat: us? Those are questions for another day, though you might want to ponder them in the meantime for extra credit.

I just watched a first-run movie on the SciFi Channel: Alien Siege. Standard plot line: aliens come...aliens harvest people...aliens get beaten back. What also has become standard fare these days: The General of the American forces was an attractive, wise and understanding older Black man. The leader of the underground resistance was an attractive, wise and understanding younger Black man. The villains and the stupid people, including the aliens, were all White, of course. That's the way it is with the SciFi Channel now, you know. I started watching their "4400" series, then turned it off in disgust when it became clear, early on, that the female blonde lead was on the make for Black guys, one of whom appeared to be the prime male lead. I give up on the SciFi Channel. I've simply had it. I have a new motto now: If I see Black, I don't go back. SciFi Channel can depend upon its Black viewership for support from now on, so far as I am concerned.

The commercials came hot and heavy during the movie, of course. I was most struck by Burger King's commercials, which presented a musical cast overwhelmingly composed of Black cowboys, Black women and several beautiful blonde White women. In fact, I notice that not one single TV commercial these days gets by without a significant Black presence, usually anywhere from one-third to one-half the participants. No more Burger King for the Steele household, folks: If I see Black, I don't go back. Let them make it on their Black clientele, which is what seems most important to them.

In fact, I'm making it my personal mission in life now, regarding all things I see advertised: If I see Black, I don't go back. No, it won't make much of a difference. But if you join, too, it will begin to sting.

We wouldn't have minded if they had kept it proportional. We wouldn't have minded seeing 12% Blacks in commercials and movies. We wouldn't have minded seeing a little overrepresentation in management and professional roles, either, but this has gotten totally out of hand. I am particularly offended by the media's portrayal of White women with Black men. Now I want to see it the way it used to be: all White. That's what it will take to win me back. Until then, I won't watch and I won't play and I won't pay. Get your Black viewership to support you for a change.

I gave up watching sports on television long ago: just ten black guys running up and down the floor...or field...or whatever. Put it in proper context, with a lion chasing them through the jungle, and I might just start watching again. But, to watch these grotesquely-overpaid drug addicts, sex criminals and intellectual midgets bounce a ball and make with jive talk and hip-hop, anti-White behavior? No, thanks. Let their team owners and sponsors be supported by their Black fans.

And the news? I used to read a number of newspapers and magazines every day, as well as watch CNN nonstop. I never missed the nightly network news. I stopped all that, though. Coincidentally, it was at about the same time that Blacks started being force fed to us via those venues as well. I stopped because I got sick of getting nothing but lies and the party line. But, it's of a piece, isn't it? All those Blacks in unlikely poses and improbable positions simply are a part of the massive media lying that began in the 'Sixties and really picked up steam in the 'Eighties.

Join me, won't you? Boycott products advertised with Black actors and models. Make a statement: If you see Black, don't go back.

Boycott TV shows and movies with Black actors. Send the message that we are fed up: If we see Black, we don't go back.

Cancel your subscriptions to newspapers and magazines that push Black articles, columnists and advertisements into your face. There are plenty available that don't. Not coincidentally, those that don't promote Blacks are the same ones that actually tell the truth about other things, too. Tell them when you cancel: If we see Black, we don't go back.

Say it again: If we see Black, we don't go back.

Say it again...louder: IF WE SEE BLACK, WE DON'T GO BACK!

Blacks demand that other Blacks support Blacks and that is commended. Jews demand that everybody else support Jews and they get away with it. We aren't demanding what's theirs. We're demanding only what is ours. We demand the right to be able to support White people! It's all right to be White, after all. Another catchy phrase, that one: It's all right to be White.

Get this, once and for all: It is not racist to support your own race.

New America. An idea whose time has come.

-ed

"I didn't say it would be easy. I just said it would be the truth."

That antenna design was by Oswald G. Villard, Jr., W6QYT. It was I believe written about in the WRTH at one time. Mr. Villard passed away in the last few years.

JIM,
.
Take a Look at this Hard-Core DX webpage.
"Antenna for Reducing SkyWave Interference"
Written by Dr. O. G. Villard, Jr.
http://www.hard-core-dx.com/nordicdx/antenna/special/reducin1.html
.
FWIW - This design is for ShortWave "SkyWave" Signal Reception.
.
NOTE - This is from a prior posting to this NewsGroup.
"Home Brew Noise Canceling (Anti-Jamming) Antenna"
.
This Antenna was Originally Designed as a simple and easy to
build Anti-Jamming Antenna for Radio Free Europe Listeners.
http://www.ibb.gov/engineering/antenna1.html
.
They also Claimed that this Antenna should work with reducing
'man made' local noise. A so called "Coplanar-Twin-Loop" (CTL)
.
This special and unusual Antenna was designed by a research
scientist at Stanford Research Institute; Dr. O.G. Villard.
If you want a paper to read with substantially more information on
the theory and construction of the Antenna authored by the inventor
see the article in QST, 'The Coplanar-Twin-Loop Antenna'
- - - September 1988, pages 29-35.

I'm sure he flew over not far from my QTH since I live about 200 miles southeast of Salina. I probably would have picked him up when he got to altitude but I didn't have any frequencies available, and couldn't find anything by searching.

Well 4300 and 6500 are in the maritime band, but 4300 is in the old CW portion of the 4 MHZ maritime band, and 6500 is just one KHZ off channel 601 in the 6 MHZ band. He did interfere a bit with NMN passing weather but not enough that I could hear where he was hindering communications. In fact, I think NMN interfered with YS more than the other way around. Now if he'd been on 6502 then I think he'd definitely have caused more interference.

Not that I'm condoning or defending this guy, but I don't think he was that much of a nuisance, even when he was transmitting under WWV. On the other hand, I believe he was causing quite a bit of interference to ham communications on 3700.

58. Shortwave Listener's (SWL) the "Random" Horizontal [Flat] Loop Antenna

Newsgroup: rec.radio.shortwave
Date: 2005-03-01 14:45:13 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1109688313.143516.39690@f14g2000cwb.googlegroups.com>
Source record: 9645

JD,
.
You and Tianli are correct. Just as for Shortwave Listening
(SWL) the simplest and easiest answer to a Longwire (or any
other "Formula" Cut-to-Size) Straight Wire Antenna is the
"Random" Wire Antenna.
.
THE SHORTWAVE LISTENER (SWL) HORIZONTAL [FLAT] LOOP ANTENNA :
So to for the Shortwave Listener's (SWL) the Horizontal [Flat]
Loop Antenna can be the Antenna that fits their available space
and gives them the higher Signal Levels and Lower Noise Levels
with a more consistent (less fade) signal. For the Shortwave
Listener (SWL) a "Random" Horizontal Flat Loop Antenna an can
be the answer for a longer larger (more signal capture area)
Antenna to meet their needs.
.
SOME PLUSES - For a Shortwave Listener (SWL) in using the
Horizontal [Flat] Loop Antenna are :
.
+ Generally Lower Noise
.
+ Generally Omni-Directional
.
SIZE - HORIZONTAL [FLAT] LOOP ANTENNA -vice- RANDOM WIRE ANTENNA :
.
* Room-Size (Indoor) Ten Foot (10') Square Horizontal Loop Antenna
= 40 Foot Random Wire Antenna
.
* Very Small 15 Foot Square Horizontal Loop Antenna
= 60 Foot Random Wire Antenna
.
* Small 20 Foot Square Horizontal Loop Antenna
= 80 Foot Random Wire Antenna
.
* Moderate - Average 25 Foot Square Horizontal Loop Antenna
= 100 Foot Random Wire Antenna
.
* Medium 30 Foot Square Horizontal Loop Antenna
= 120 Foot Random Wire Antenna
.
* Large 35 Foot Square Horizontal Loop Antenna
= 140 Foot Random Wire Antenna
.
* Bigger 40 Foot Square Horizontal Loop Antenna

= 160 Foot Random Wire Antenna
.
* Extra-Large 45 Foot Square Horizontal Loop Antenna
= 180 Foot Random Wire Antenna
.
* Giant 50 Foot Square Horizontal Loop Antenna
= 200 Foot Random Wire Antenna
.
HEIGHT ABOVE GROUND :
Some comments may be made about this being a "Cloud Warmer"
or a "Near Vertical Incident Skywave" {NVIS} Antenna.
NVIS=> http://www.qsl.net/k5eph/nvis.htm
.
IMHO - In general this is a good characteristic for a Shortwave
Listener (SWL) Antenna.
.
For use as a Shortwave Listener (SWL) Antenna the Horizontal
[Flat] Loop Antenna can be mounted at just about any Height
that is easy and available to use. A general Height of 12
to 18 Feet is easy to achieve and works well. While near
"Flat" is nice : All Corners (mounting points) do not have
to be the same Height. Usually the main objective is to get
it "UP" above your Head (non-hazard) so the Loop's Wire can
be as little as Eight to Ten Feet High. Anything above 25
to 30 Feet is really not necessary unless that is all the
mounting point at are Available.
NOTE - For a No-See-Um Horizontal Loop Antenna the Wire can
be run around near the Top of a Fence. Or around the House
under the Eaves.
.
SHAPE OF THE LOOP :
A Circle would be perfect and a Square would be nice.
But the simple fact is that for a Shortwave Listener (SWL)
this is a "Random" Loop Antenna that is put-up in the
available Space. Any general "Shape" using the existing
structures as mounting points or any mounting points that
you can easily erect should work well. The "Sides" of
the Loop do not all have to be the same Length. The
important thing is the Shape allows the Starting-Point
of the Wire and the Ending-Point of the Wire come together
to form a Loop.
.
FEED-IN-LINE FOR THE LOOP :
The Feed-in-Line for the Horizontal [Flat] Loop Antenna
can take many forms. Directly Wired 300 Ohm TV type
Twin Lead or Coax Cable and even Speaker Wire could be
used as a Feed-in-Line.
NOTE - When a Coax Cable is used as a Feed-in-Line :
A Matching Transformer {Balun} can also be used between
the Loop's Wire Antenna Element and the Feed-in-Line.

The Balun can be a 1:1 Radio or a 1:4 Radio.
.
GROUNDING FOR THE LOOP :
Since the Horizontal [Flat] Loop Antenna is a Balanced
Antenna a Ground for the Antenna itself is not required.
However, this does not eliminate the Requirement for a
good Earthen Grounding Point for the Shack's Equipment
and Radio/Receivers.
.
.
BUILDING A SIMPLE AND PRACTICAL TV "Type" PARTS
"RANDOM" HORIZONTAL [FLAT] LOOP ANTENNA :
1. Use 50 Foot or more of TV 300 Ohm Twin Lead as the Loop
Antenna Wire Element. This can be connected either in
Parallel as a Double-Wire Single Loop Element; or in Series
as a Two Loop Element.
2. Use a TV 300 Ohm to 75 Ohm Matching Transformer as a
Balun between the the Antenna's Wire Loop Element and the
Coax Cable Feed-in-Line.
Note- Find one that is labeled with a 5 MHz bottom
frequency rating.
3. Use TV 75 Ohm Coax Cable with "F" Connectors as the
Feed-in-Line from the Loop Antenna's Wire Element and
Matching Transformer to the Radio/Receivers.
4. Use what ever connector Adapter is need to connect
the TV 75 Ohm Coax Cable to the Radio/Receivers.
.

59. WOR no longer at 1440 Broadway

Newsgroup: rec.radio.shortwave
Date: 2005-03-01 14:57:52 UTC
From: Joel Rubin <jmrubin@ix.netcom.com>
Message-ID: <Qp%Ud.11299$Ba3.4497@newsread2.news.atl.earthlink.net>
Source record: 9647

Those who have listened to Jean Shepherd may have heard the old (when he played it) ad for W-W-W-W-somebody stop me-O-R. It mentioned the location at "Fourteen Forty Broadway", the now dead Mutual Network and a "Fifty Kilowatt Smile".

The station started at Bamberger's Department Store in Newark in 1922. (for many years it was owned by Macy's which owned Bamberger's; the Strauss family, which owned Macy's and was famous for the insistence of Mrs. Strauss to go down on the Titanic with Mr. Strauss, later owned WMCA when it was rock's "Home of the Good Guys".)

It had a New York satellite location on West Fifty Seventh Street and moved to 1440 Broadway, south of Times Sq., in 1926.

Now, it has moved down to 111 Broadway near Wall St. Part of this is a feeling of support for downtown after 9/11; part of it is a need to upgrade for that ugh digital system that expands the bandwidth to thirty kilohertz.

They simply have to let the FCC develop their case. I'm fairly certain that at some point the FCC will release the information as to what the charges are, fine to be imposed, etc.

It just tkes a bit of time. After all, it's only been about 12-13 days since the bust.

Might be easier to send the $2 that they request. How much are IRC's these days?
I haven't used them in years, preferring the 'green stamp' route', and typically
I'd only send one.

The "Posted via Newsfeeds.Com" signature is tacked on by the usenet
server farm that my little mom and pop ISP uses. I have no control over
it. I have no way to NOT include this as part of the message. I
apologize for any inconvenience this may cause, but like I said this bit
of self promotion on the server farm's part is automatically included in
every message that I post by the usenet provider.

Yes, but it's not listed as being on after 0100 in English to NAm.

I haven't used them in years, preferring the 'green stamp' route', and typically
I'd only send one.

dxAce
Michigan
USA <<

You might be right. The cost seems to vary - the ones I'd sent to Guatemala recently were around 75 cents, if memory serves (and it doesn't always anymore ;-), and the IRCs for Sri Lanka were a buck more than that. When I purchased them, the PO wanted to know the specific nation, and the IRC had the nation and value printed on it.

If they want two, there's probably a good chance that they intend to send along more than just a QSL postcard.

That's interesting. I recall them as simply being generic, but then it's been
many years since I've purchased any.

They're doing it by cell phone signal or something so far here, which is very expensive. I can't imagine satellite is cheap right now.

Regarding poor countries, I heard a RN broadcast about a Swiss company that does "micro loans" of usually less than $1000, which is used to finance a cell phone and in some cases a tower for poor villages. The cell phone owner and money borrower than sells air time to the other villagers. They call the city and determine when to market their produce, and call their overseas relatives without having to travel to a town with a landline. I would think the next logical step would be internet access via micro loan. This sort of thing sounds so sensible to me.

I'm more convinced than ever that it's the noise you don't really notice that makes life difficult. I've been waging a war against noise for some time now. I started using a Wellbrook loop, which helped a lot with noise. I attached ferrite cores to all the cables and power cords in my home, which helped more. I compared my reception when running on AC with the my reception when running off an external power supply, and found that the external power supply actually increased my noise level (can't win 'em all). Next, I compared my reception when using AC power to my reception when using battery power, and found that the battery brought my noise down YET AGAIN. In each of these cases, I didn't know beforehand what, if anything, would result from changing my setup. In most cases the results were positive and I'm glad I took the time to experiment with them.

The moral is: If you think you don't have a noise problem, suspend this assumption just long enough to experiment a bit. You might be surprised at the improvement that's possible! The steps that helped me probably won't help everyone, especially those who live in environments that are less noisy then mine. Still, I'll bet that most people would benefit from at least one of these steps.

Steve

> "Keep bashing the dead white males, and the live ones, and the females,
> too, until the social construct known as the white race is destroyed.
> Not deconstructed, but destroyed."
> --- Noel Ignatiev, Jewish Harvard professor and editor of Race
> Traitor magazine (Washington Times, September 4, 2002)

So what, he's just another kook on the opposite side from you. Who care
what the moron says. He's probably saying stuff like this to get a
reaction, and he did. I love the Race Traitor Magazine shot, it shows
what kind of person it was that wrote it.

>
> "The white race is the cancer of human history."
> --- Susan Sontag (much-celebrated Jewish "intellectual," whose
> recent passing was lamented loudly in Jewish circles)

Another Ultra left winger that nobody really cares about. A bigot is a
loser, regardless of what color they are..besides, she's dead.

>
> "I don=3Ft care about your idiot children."
> --- Willie Brown (Mayor of San Francisco, to a white parent
> complaining that affirmative action would penalize his children), quoted
> in The Social Contract (Summer 1998, p. 290)

Well, payback is a bitch, isn't it? A little swing the opposite way for
a generation or two wouldn't hurt us white folks all that much..

>
> "It's always illegitimate for white men to organize as white men."
> --- William Raspberry (black columnist), Dubiously Exclusive,
> (Washington Post, Nov. 24, 1995)

Taken out of context, I'm sure, and he's probably talking about a "white
peoples party", or something similar.

>
> "Q: What kind of world do you want to leave to your children?
> A: A world in which there aren't any white people. . . ."
> --- Leonard Jeffries (chairman of the African-American studies
> department of the City College of New York), interviewed by T.L. Stanclu
> and Nisha Mohammed, Rutherford Magazine (May 1995, p. 13)

Another left wing asshole. Why do their comments bother you so much?
Nobody much cares what they say..

>
> "You guys have been practicing discrimination for years. Now it is our
> turn."
> --- Black Supreme Court Justice Thurgood Marshall (in a conversation
> with Justice William Douglas about racial preferences), quoted by
> William O. Douglas, The Court Years, 1939-1975 (New York, Random House,
> 1980)
>

Well, it's true, in a way. They can't really do it though, there are way
too many of us white folks.

> Enough!
>
> I'm ready to shoot my TV. Honestly. But for my family, I would cancel

> any consequence is Black, of course, with those Blacks holding the most
> prestigious positions - after all, today's movies all have Black
> Generals and Presidents and heroes of every stripe.

What do you do, count them? Damn, you really need to get a life. Why are
you so jealous of jews? I could see it, IF they just got their jobs out
of high school, and didn't go to college and work their way up (nepotism
doesn't count), but you know, they seem to work hard as a rule, and
that's why they are successful.

>
> But the Glorps would see another race, too, because the villains always

> running things. The one thing so dreadfully different from TV, of
> course, is the Black reality.

Of course the "Glorps" would probably laugh at your insanity, and say,
"But almost all the Jews are white..what is the problem?" And then you
would have to explain all the crazy shit you believe, and the aliens
WOULD kill off us whites, due to a cracker's insane remarks.

>
> TV Blacks are smart, friendly, athletic, beautiful (with those
> never-mentioned White-caste genes everpresent), retiring, wise, helpful
> and in charge.

I know and knew a couple like that. One was a postal worker, his wife
was a teacher. They raised 4 successful kids, who's kids seem to be
doing well. And whites and hispanics too.

Real-life Blacks tend to be stupid, hostile, lazy, fat,
> mean, demanding and in jail.

I knew/know a couple like that too. Also whites and hispanics, so? There
are trash of every color.. Lots of reasons to dislike people other than
color.

Oh, give me a break! Don't even begin to
> try to tell me it isn't true! I really have no patience left for White
> people who deny the reality surrounding us all.

You really need to get a life. And an edumacation.

>
> And it has nothing to do with racial "equality," either. Otherwise,
> where on TV and in the Movies are all the beautiful, wise and worldly
> Chinese, East Indians, Japanese, Russians, Serbs, Arabs, Eskimos,
> American Indians and so on?

There are some, but not a lot, but there are some out there.

> Why does affirmative action in the media
> always excessively favor just Blacks?

Because they were/are the primary target of your insane hatred, and were
screwed over for a long time. The jews have power, you can't fuck with
them, all you can do is wail about how the are plotting this and that,
and whining about how white people are being picked on....wahhhh!

> And why do Jews seem never to
> have to give ground, leaving that chore to the other White meat: us?

White trash needs cleaning up. Like any other trash. The jews are too
smart for you.

> Those are questions for another day, though you might want to ponder
> them in the meantime for extra credit.

Hey, it's your fixation. Your problem.

>
> I just watched a first-run movie on the SciFi Channel: Alien Siege.

"I'm sorry Timmy, we can't go to Burger King anymore!"

"But why Mom?"

"Well, your Daddy saw too many negroes dancing with white women in the ad on TV last night"

"Huh? Daddy's weird!"

"I know honey, I'll take you to Burger King when Daddy is at work sometime"

"Daddy's a kook, isn't he Mommy?"

"You said it Honey!"

>

> That's what it will take to win me back. Until then, I won't watch and
> I won't play and I won't pay. Get your Black viewership to support you
> for a change.

LOL, so what was the percentage of blacks last week on CBS? Times have changed, you can't go back to the good old days when you could lynch a black guy for looking at a white woman. It must kill you not to be able to get away with that shit anymore.. Dem negroes is too uppity now, aint they?

>
> I gave up watching sports on television long ago: just ten black guys

> with jive talk and hip-hop, anti-White behavior? No, thanks. Let their
> team owners and sponsors be supported by their Black fans.

So don't watch. I personally could give a shit about 99% of sports, but if you don't understand why so many black people are playing, then you have other issues you need to address.

>
> And the news? I used to read a number of newspapers and magazines every

I've got 4 90 minute cassette tapes here of Voyager I. A lot of dead air on each one of course!

I recall picking them up off the east coast of Africa, and being able to hear them off the coast of California before they landed.

The frequency you probably heard mentioned was 17.705 in Portuguese from
2200 GMT 2330 GMT and in Guarni from 2330 GMT to 2400 GMT then Quecha from
0000 GMT to 0030 GMT.This was per the B04 schedule of Radio Habana Cuba.

The A05 schedule starts this Spring so watch for frequency changes in an
upward direction. Good Listening and DX!!!

He's actually a teacher at the Massachusetts College of Art. It's not exactly news that there are college campuses full of head cases out there, Al. Ol' Mr. Ignatiev is not going to change the world with his ranting, and, you know what? You're not doing this newsgroup any favors by posting this stuff here. Maybe you and Noel can get together some time and duke it out. Just don't report back here about it, all right?

>
> Steve
About 15 years ago we hasd a nasty ice storm.
Knocked out the AC mains, telephone, and cable TV for 3 days.
I was amazed at how quite it got.
I was operating from a couple of GellCells, kept charged off
by a a small PV (solar cell) array.
Other then freezing my but off, it was great fun.
Since I normally only go on camping/mine DX-epditions in the
late summer and early fall, it was much wquiter at home then
I had ever exeprienced in the deep woods.
I could hear the igniton noise from the highway about 1 mile

away!
I had very mixed feelings when they brought our power back on.
I was tired of the cold, but reslly enjoyed the quite.
I have done all that I can to reduce the RFI that I produce.
I have bypassed all the AC mains outlets, bypassed teh AC mains
where it enteres the breaker box, used lots of RFI suppresion
ferrite "beads" on all the active electronics, imporved my ground
system as much as I can, and use the best (lowest noise) antenna
that I can currently afford. Since I had a glimsp of what true radio
quite conditions were, I had the incentive to do what I could.
It made a big difference. But, alas it is a far cry from the quite
I had for a few days. Given the omnipresent man made electrical noise
around most American cities, I suspect that very few of us get to see
just how sensitive our receivers really are.

I think there was a thread recently where someone
wanted a link to a "screwdriver mobile antenna".
Found this while looking for NiMH cells.

I just purchased 30 on Saipan the other day. The brand new ones are
about the size of your typical QSL card AND expire on 31 DEC 2006.

I guess the UPU was trying to stop people from hoarding them and using
them as currency or for trade.

AND what's more, the buggardly things now cost $1.75 (printed on
them). They are bar-coded too.... The old 80 cent jobbies are
history, I guess. I only sent 1 to RNZ, and at a buck seventy-five,
that ought to be enough to airmail me a stinkin' card!

Michael - Can you pick up WFLA, Orlando, on 540? I found that station pretty useful during the hurricanes except, of course, for local info. I live in Lakeland and can pick them up even in the daytime. WFLA 970 in Tampa is stronger here and they had decent storm-related info too. But none of the powerhouse stations are in a position to serve the Ocala area with local news. One source you could check out is the local ham emerg. net on VHF. Their traffic usually includes info on supplies being delivered to aid stations as well as general storm and survival-related info.

BTW, how much do you pay for broadband internet? I pay $40/month for Road Runner. I believe XM radio is "only" $10.95/month. I am tempted to try it since I am in my car a good portion of my work day and there is zero on AM radio that interests me. FM is almost as bad.

Regards,

Greg

If anyone's interested, I have confirmed the exact address for the
Catholic Radio Network via their manager, Fr. Mlak:

You can write to:

Fr. Zdzislaw Mlak
Catholic Radio Network
P.O. Box 7671, Boroko, NCD
Papua New Guinea

Bear in mind that they are not set up for verifying, but if you're
extra nice, I'm sure the good Father will accomodate you as time
allows.

Good DX everyone!

Al

I know a man who MADE one using a cordless battery operated screwdriver.
I suspect that may be where they got their name. He talked MOBILE 2
MOBILE to France from NC, USA; but I expect the conditions were "right"
at the moment. That was several years ago. I don't recall seeing him
with that lately. Don't know if he changed vehicles and it was a bit
more difficult to brace up on the second one. Seems the first vehicle
was a station wagon.

I think they are used mainly for transceivers as opposed to receivers.

Looks like a smaller version of the PL550. Or, put another way, a model
designed to compete with the Degen DE1102 - without SSB. Come to think of
it ... do ANY Tecsun models have SSB?

On the flip side, one could say that the receivers, especially
tabletops, HAVE to be sensitive in order to deal with all the noise.

You're probably right. I wonder if he read this group and got off on
reading all the "government spy op" theories. I guess that in a contest
between paranoid fantasies and reality, one should put one's money on
reality. That said, there ARE a lot of REAL spy tx's on SW. I still
wonder why the Mossad would run Sierra Yankee November Two on the edge
of an international broadcast band for DAYS ON END. I mean, you think
the message would have gotten across after the first couple days.

Not now, but I've heard of areas where even cell phones can't reach
(like deep in the mountains) where satellite internet is feasible.

The micro loans I've heard about are for people in poor countries to
start small one person businesses to feed their families, but this is a
logical extension. And yes, it's so much more sensible than BPL, which
doesn't work well in America and Japan, can you imagine how it would
(not) work in someplace that has decrepit infrastructure and power for
four hours a day?

Yeah, somebody on this group mentioned that they have this antijamming antenna design up on the Radio Free Asia website, with text in Chinese of course. I wonder if it would actually work with a typical Degen or Tecsun radio, which doesn't have terrific selectivity to begin with. I'm sure that tianli would have more info on what the average Chinese does to listen to "forbidden" broadcasts with a small portable that's easily overloaded.

Alright,
He can come and talk about his great antenna and tell us about some of the new thing he has coming out.

I bought one of his great little Tiny-Tenna and I am still using it. I also got a great double YoYo antenna for my YB400 and it works great. It lets me get an "L" in rooms or on a balcony when I am traveling.

Please be sure and let me know when he is going to be on, THANKS FOR ASKING HIM!!!

Well, according to ILG the VOA broadcasts is english on 11,705 during
those times most of the week.

RHC is on 17,705 00:00 to 00:30 UTC. Maybe that is what you heard.

I've got Radio Farda in southeast Texas at 0309 UTC on 7105 kHz.

Their web site says it's to Iran.

http://www.rferl.org/listen/shortwave/default-frd.asp

According to the Radio Sawa site, they're not on short-wave anymore.

I can pick up both of them, but neither are very clear. The only two
meter receiver I have at the moment needs a regulated 12 VDC power
supply and was out in my shop where I couldn't get to it.

Earthlink is $45 a month, the same as RR or AOL broadband here in
Belleview. I don't drive much anymore, I have Carpal Tunnel in both
hands and nerve damage so a drive across town can be painful. I am now
on full disability because I can't work any set schedule and it drives
me crazy. I was working at Microdyne as a test and engineering tech
when I had to stop working a few years ago. I'll bet there is still
some equipment in use in stations you've seen that was built in Ocala,
or their AFC microwave antennas.

I wanted to fix up a nice shop here at home to enjoy my retirement by
collecting and restoring oddball electronics. My benches are still
covered with plastic since the hurricanes. I was out there today and
one of my shelves has snapped due to water damage.

I agree with nothing good on the local radio stations. The only
station I would listen to on Satellite is WSM, and its on Sirius. Since
I'm at home 90 percent of the time I figured it was cheaper to spend the
money on a better internet feed.

I have a friend who is still an active contract engineer in the area
and get the horror stories when he has time to stop by the house. If

you're anywhere close to Ocala email me sometime.

I'll try that. Yes, I realized that "Farda" sounds like "Farsi" (the
language of Iran) after I saw Iran on the page.
>
> According to the Radio Sawa site, they're not on short-wave anymore.
>
> http://www.radiosawa.com/english.aspx

Most of Sawa's SW broadcasts were to Iraq; I imagine that they've got
enough AM (MW) and FM transmitters in Iraq now that they don't need SW.
That's too bad, it deprives SWL's (especially those in America) from
hearing what exactly the US is broadcasting to Muslim countries in the
name of curbing terrorism. Having heard it, I can say that it was mostly
Arab and American pop music with some "news" thrown in. I really don't
think that any Arab teenager thinking of being a suicide bomber is going
to hear Destiny's Child on the radio and change his mind.

S9+10 interference on that freq at 0330 in northern California. Real loud buzz, probably the same stuff that I've been battling on 31m for months. I thought I heard something in USB, but it may have just been my imagination.

At the same time I ordered that first radio,the one with AM/FM/weather band and two tv bands,from ccrane company,I also ordered one of those round antennas that has a knob in the middle of it,I paid about $57.00 for that antenna,and I ordered one of those Radiometers,the gadget that has four little vanes inside of a piece of glass that looks sort of like a light bulb and the vanes spin around when placed in the sunshine or under an electric lamp,because I used to own a gadget like that about 55 years ago.That antenna didn't show me shit either.Useing that antenna with that radio,it wouldn't pick up KVOO Tulsa,Oklahoma (KVOO used to be on the AM band) any better than some of my other radios.Any good company keeps records of the products they sell and records of the products returned for at least ten years in my opinion and if Bob Crane is reading this rec.radio.shortwave news group (which I doubt he does) he can damn sure pull up the data from about six or seven years ago when I bought and I returned every one of the products I bought from ccrane company,except I did keep my Radiomometer though.When I ordered that Sangean ATS-909 shortwave radio,I also ordered one of those shortwave antennas that is nothing more than a piece of wire and a recoil reel with an alligator clip on one end of the wire.I sent that stuff back to ccrane company too.There is an old saying,The Customer Is Always Right!

You can sometimes get rid of noise with the ANC-4, but it has been my experience the noise needs to be really local, such as your damn PC.

I use a Wellbrook ALA-100, which is their basic amp with a roll it yourself loop. I will never go back to a long wire. I've built a DC adapter for the Wellbrook (as discussed before, the thing is postive ground so use caution.) Taking the Wellbrook out in the boonies, you can experience low noise. At my house, forget it.

This is the small loop, about 3ft on a side.
http://www.lazygranch.com/images/radio/loop1.jpg
http://www.lazygranch.com/images/radio/loop2.jpg
http://www.lazygranch.com/images/radio/loop3.jpg
http://www.lazygranch.com/images/radio/loop4.jpg
http://www.lazygranch.com/images/radio/loop5.jpg
I have a similar set up that is 7ft on a side. That is about as large as this single hub design can handle.

The thing with the Wellbrook loop (supposedly) is that as you make it larger, the signal to noise ratio increases. It's not like a long wire where the longer length boosts both the noise and the signal. Here is what Wellbrook says about this:

The large aperture of the ALA 100 improves the signal pickup to optimise the signal to noise ratio and also reduces fading at HF, this is a very important advantage compared to small active antennas
http://www.wellbrook.uk.com/ALA100.html

I run the ala 100 with a loop about the size of a hoola (sp) hoop. That is about as small as you should go.

You may be right. I suspect her electronic equipment is on the barely-get-you-by side, and she seems not to have learned a tremendous amount about the use of it. Occasionally you'll hear phones ring, children walk in, and I'm not sure about barking dogs, but she has interruptions aplenty.

She could probably use a good microphone but I'm not sure which kind - probably one that's part of a headset. That way when she turned her head to keep up with all the other household activity she'd still be talking into the mic. Then she may need a good mixer, preferably with some compression and/or reverb built in. Adding a little bass wouldn't hurt. I don't think she ever overdrives a mic.

She's probably doing pretty well under the circumstances.

You aren't free to express your thoughts - IF they don't meet the politically correct mold - especially if your thoughts and speech happen to deny the holocaust!

Hasn't there been one or more folks arrested in Germany for a book they wrote in the U.S?

Well, Here's one whisked off to Germany, from Canada, so they could face the charge of denying the holocaust!

Check out http://www.zundelsite.org - While the site is still available. How long before they shut it down?

"Political Prisoner Ernst Zundel Deported Secretly Whisked by Chartered Plane to Germany"

"Word has just reached me that Ernst Zundel was taken in a special, chartered (?) plane to Germany, where he reportedly landed at 10 p.m., German time, (3/1/05) in Frankfurt. There, he will be arrested for "Holocaust Denial" allegedly found on the Zundelsite - and taken to the Mannheim Prison. So, once again, this is a "cyber war" involving an American website? Blue Ribbons to the fore!"

Ernst was deported from the USA back to CanaDuh as I understand it where he was arrested a few years ago.

There was some mention of him in a recent DXLD. Apparently he and/or his group was responsible for the program American Dissident Voices which aired on shortwave here. I'm not sure if the program still continues.

Here is the relevent material from DXLD 5-036:

** DEUTSCHES REICH [and non]. JUDGE RULES CANADA FREE TO DEPORT ERNST
ZUNDEL

Ernst Zundel, well known holocaust denier (deny-er?) and onetime
shortwave broadcaster's deportation to Germany imminent. German
authorities have indicated he will be arrested (for holocaust denial)
once he sets foot in that country. Zundel has been fighting
deportation for over 2 years (Fred Waterer, dxldyg via DX LISTENING
DIGEST)

Judge rules Canada free to deport Ernst Zundel --- CTV.ca News Staff
http://www.ctv.ca/servlet/ArticleNews/story/CTVNews/1109336098253_56/?hub=Canada

Jewish leaders expressed relief after a federal court judge ruled that Ottawa was free to deport infamous holocaust denier Ernst Zundel back to his native Germany.

Justice Pierre Blais called Zundel a danger to Canadian society in a 64-page decision released on Thursday.

"Mr. Zundel's activities are not only a threat to Canada's national security but also a threat to the international community of nations," Blais said.

The judge wrote that "reasonable grounds" exist "to believe Mr. Zundel is inadmissible on security grounds for being a danger to the security of Canada," The Globe and Mail reported.

Blais' ruling was a scathing denunciation of Zundel, who he said was a "leader of international significance" among white supremacists.

"He also tried, by all means possible, to develop and maintain a global network of groups that have an interest in the same right-wing, extremist, neo-Nazi mindset," Blais said.

Blais also described him as a Hitler-sympathizer who set out to expand the neo-Nazi movement and was proud of his influence.

"I remember how proud he was when he mentioned in cross-examination that his Zundelsite received hits from 400,000 people a month, and that after his arrest, the number grew to 1.2 million people accessing his website each month," Blais said.

Zundel, 65, was arrested in the United States and deported back to Canada over an immigration violation in 2003.

He has been in solitary confinement in a Toronto jail for the past two years on a national security certificate signed by Canada's solicitor general and the federal minister of citizenship and immigration.

The certificate allows the federal government to hold Zundel indefinitely pending his deportation.

Jewish leaders praised the judge's decision and hoped the deportation would be quick.

Ed Morgan, president of the Canadian Jewish Congress, told the Toronto Star the judge's decision was "a victory against racism and hate. "It is certainly a victory for all Canadians who believe in a peaceful, multicultural society," Morgan said.

Bernie Farber, executive director of the Canadian Jewish Congress, echoed his sentiments. "He could be gone tomorrow," Farber told The Globe. "All I know is, it's going to be quick. Canadians can breathe easier now."

Zundel's defence counsel Peter Lindsay told The Globe that he plans to make a couple of last-ditch efforts to stay the deportation order.

With files from The Canadian Press (via Fred Waterer, dxldyg via DXLD)

Couldn't happen to a nicer guy!!! Can't believe we allow this kind of trash into our country, and then let them fight extradition for years, to start with. It's time for us to wake up and make whatever changes are necessary to our laws to not allow this kind of garbage go on, at great expense to the Canadian taxpayer I might add, for years (Tony (VA3QC) Champion, ODXA via DXLD)

In case you wonder what in the world this has to do with radio, Zundel used to do a SW broadcast from the USA, and his followers still do, American Dissident Voices on WWRB (gh, DXLD)

The FCC's enforcement bureau page is http://www.fcc.gov/eb/ which may have
some information whenever they get around to it and stop worrying about
whether an episode of "Will and Grace" was obscene...

No, I haven't seen any. I listened late afternoon and early evening to 11300 as Global Flyer transited Egypt but heard nothing. He may have been asleep at the time and had the aircraft on auto-pilot. (although his website says he was awake. He is traveling at a very high altitude, and ATC may not be terribly concerned about him).

The problem now will be, at least from here, is that the ATC frequencies he might possibly use will be difficult to hear propagationally, at least from here, though possibilities still exist.

At present (1440) he is over halfway home and just east of Shanghai, China over the water again.

Yes, this is the only thing I don't like about conspiracy theories. To
them, it's not just a theory, it's fact because they thought it up, and they
refuse to accept any evidence to the contrary. This is what keeps militia
types burying guns in their back yard, taking pictures of the back of road
signs, and running inside whenever they see a jet contrail at 30,000 ft.

This is known as "Occam's Razor." It basically states that the simplest and least complex answer is usually the correct one.

>That said, there ARE a lot of REAL spy tx's on SW. I still
> wonder why the Mossad would run Sierra Yankee November Two on the edge

The 2 after SYN denotes "no message." So it basically means that there is no traffic for the agent. However, SYN has recently sent some message strings, such as SYN2Z58 repeated for a few hours. I haven't seen much actual 5F message traffic from this station, though.

I woke up at around 3:30 am local time so I decided to do some real DXing for the first time in a year or more. I chose the 31m band because it seems to have better reception during darkness hours. Comments at bottom.

Time: 1145-1230 UTC
Place: Sacramento, California
Radio: Yaesu FRG-8800 with 50 foot longwire

9355 Radio Free Asia from Saipan in unknown language (Korean?)
9370 WTJC (US bible thumper)
9405 FEBC, Iba, Philippines, in Chinese
9430 FEBC, Bocaue, Ph, in Chinese
9440 CRI Kunming, in unknown language
9475 Radio Australia
9500 China National Radio, Shijiazhuang
9525 Voice of Indonesia, Cimanggis, Java, in presumed Indonesian
9535 VOA from North Carolina in Spanish
9550 Radio Havana
9560 Radio Australia mixing with Xinjiang People's BC Stn, Urumqi, China, in Uighur
9570 CNR, Geermu
9580, 9590 Radio Australia, both in English
9600 Radio Havana
9605 BBC from Thailand in Chinese
9615 unknown station in Asian language, possibly KNLS, Alaska?
9625 Radio Fides, La Paz, Bolivia
9650 Radio Korea from Sackville in English
9675 Radio Cancao Nova, Cachoeira Paulista, Brazil
9695 Radio Rio Mar, Manaus, Brazil
9705 Family Radio (bible thumper) in Spanish
9715 Radio Netherlands in Spanish
9725 University Network from Costa Rica (bible thumper)
9740 BBC from Singapore in English
9750 Voice of Malaysia
9760 VOA from Philippines in English
9780 CBS, Taiwan
9795 Radio Netherlands in unknown language
9855 CNR, Beijing
9890 Radio Netherlands in unknown language, possibly Dutch
9920 FEBC, Bocaue, Philippines
9930 World Harvest Radio (bible thumper) from Hawaii in unknown language
9965 KHBN, Voice of Hope, Koror, Palau, in Chinese
9985 WWCR

Comments:

I'm not sure on the ID of 9750-Radio Japan is on at the same time.

Indonesia was playing some beautiful Indonesian music when I tuned in.
This is my first log of Indonesia.

Isn't University Network one of Gene Scott's stations?

The two stations on 9560 were almost equal strength at my location.

I think it is a division of General Motors in CanaDUH that used to make and market a certain model of automobile in CanaDUH that had the Frontenac name plate on those automobiles.I saw one of those automobiles going down a highway back in the 1950's or 1960's.They might still be making those automobiles in CanaDUH with the Frontenac name on them for all I know.It was either General Motors or Ford of CanaDUH that was making those automobiles.

I've never had that scenario happen for very long;
usually for me the power goes out for a while during
a thunderstorm, but I'm not inclined to fry my
electronics and hook up the big antenna at that
time. The two biggest changes I had to clean up
noise were: move to a house where the electrical

and phone lines are underground, and to take the Sat 800 off of the same breaker used by the Dell laptop for work and put it on a separate one. In the case of the Dell, noise coming through the AC/DC transformer was absolutely horrible; my trusty home computer never had that issue.

Wednesday March 2, 2005

Europa Radio International will begin broadcasting from Miami via WRMI on Sunday, March 20th on 6879 / 15725 to North America and on 9955kHz to the Caribbean.

Progress on our own recently acquired transmitter, as expected, has been slow due to transit delays and poor weather conditions however we hope to have some good news by mid-April. We will keep you updated here so please check back often.

Zundel tried and failed to get asylum in Canada as a political refugee. Canada gave him and his lawyers plenty of opportunity to state his case. More, in fact, than the average citizen want to give him. It was determine his case had no merit and was refused, and he was deported from Canada. He got the same chance to state his case as any innocent or despot from any other country.

This was after being charged with distributing materials that are contrary to Canada's new "hate crime" laws. When he couldn't make a go of it in the U.S., he returned to Canada.

He is not a Canadian citizen, and was asked to leave. Something similar happened in the U.S. I understand.

Since he is still (AFAIK) a citizen of Germany, it is one of the few places he is "welcome."

Remember that "freedom" has two parts: there is "freedom to", and then there is "freedom from." A truly free society has to find a balance between these two, often opposing, notions. Many countries have decided that freedom from Zundel's unsubstantiated and specious notions regarding recent history is more important than a single individual's freedom to spread hate propaganda.

What does this have to do with shortwave? Colour me guilty of contributing to an OT posting.

And I don't need any damn spellchecker crap either.I learned how to spell in school many,many years ago.Webtv has a spellchecker thingy,but I have no need for it.Newspapers used to have proof readers many years ago.Have y'all noticed the so-called spelling in newspapers lately? And often they leave out some words that should be there or they sometimes print the same two words back to back and they can't pronounce words worth a shit either.Charlotte Thomson Iserybyt's book,The Deliberate Dumbing Down Of America.Get that book and read it.Or,since some of y'all like google.com so much,go and google it.(F..K google!!!) Next time y'all have a chance to check out public school books,especially public History school books,compare those books with what y'all know or can find out about Real History.

I wondered why all of a sudden we started getting so many TINYTENNA orders all at once! That's all I've been working on today! Then someone alerted me to the fact that another TT troll was on the loose in RRS.

We've been very busy with the YO-YO-VEE's, as discussed in WorldRadio, QST, CQ, etc. of late. So we haven't had too many TT orders until this past week or so. That's why it surprised us so!

I guess any publicity is better than no publicity. Thanks everybody!

Don't forget about DX RADIO SCHOOL on WWCR. We're tucked in with some nice company on Saturday nights: Glen Hauser, DX Party Line, Radio Weather, Adam & George. Tune in! 5.070 megs at 11:30 pm Eastern. (Yes, it airs at other times. But that's when the new editions begin.)

That looks like a possibility John, but I'm sure they're looking at all scenarios at this point. If he can pick up some decent tail winds the problem of the fuel discrepancy might be overcome.

More sensitivity then the local noise floor doesn't do you any good
and might
add to your problems. Think about it. If you have 100uV of noise then a
receiver
with a 10uV threashol will need to have a signal that is above 100uV
to be heard.
A 90uV signal will be 10uV below the noise floor and lost.
It is much better to remove your local noise to the point where yoy can
use better sensitivity.

Virgin Atlantic GlobalFlyer special event on the air (Mar 2, 2005) --
Special event station K0KSU will be on the air from Kansas in conjunction
with the Virgin Atlantic GlobalFlyer round-the-world solo flight by Bob
Fossett, who took off from Kansas February 28. The aviation adventurer is
expected to return to Kansas sometime on March 3. A spokesperson for the
Kansas State University-Salina Amateur Radio Club told ARRL that K0KSU is
operating during daylight hours only on 20 and 15 meter SSB (K0KSU has been
worked at 14.259 MHz). QSLs will bear the likeness of the GlobalFlyer, with
permission from Virgin Atlantic. The club is hoping to revitalize the
university station with this event.

205. ClearSpeech Base Unit

Newsgroup: rec.radio.shortwave
Date: 2005-03-02 21:35:55 UTC
From: sdaniel13@nyc.rr.com
Message-ID: <1109799355.949843.275900@l41g2000cwc.googlegroups.com>
Source record: 9743

Over the last day or so I've had a chance to experiment with one of the old ClearSpeech base units. I've heard mixed opinions about the value of this unit when it comes to DXing weak signals. Some say it can make some signals intelligible when they otherwise wouldn't be, while others say that it can't. My own sense is that it can, *depending on the circumstances*. If the signal is just so weak that you couldn't make it out even under optimal circumstances, then the Clearspeech can do anything about that. However, if enough signal is there but you're unable to resolve it because it's awash in noise, *then* the Clearspeech *can* make it intelligible--by stripping away the noise. So, I think this unit has real value for DX purposes, except on those occasions when the band you're listening to is just very quiet to begin with. At all other times, I think the ClearSpeech unit can make a significant difference. It's very neat and works better than I expected. When using it earlier today, I had the best, cleanest audio I've ever had of Diego Garcia on 13254 khz.

>From a purely functional point of view, I prefer the base unit to the speaker version because I already have a speaker I like, and I've heard nothing especially good about the ClearSpeech speaker. The only advantage to the speaker unit, so far as I can tell, is that it's newer and has improved signal processing capabilities. I wish Heil had decided to pick up production of the base unit instead of the speaker version, but so it goes.

Hiya...

Someone that saw my web page e-mailed me with a question regarding what would be the best and most economical way to get an R-75 in Poland.

I have no idea how to advise this fellow... Does anyone here have any info that I could pass on to him ??? May be a good online dealer that will ship to Poland ???

Thanx in advance...

I am sure all that needs to be done is to open the unit up and insert a mini jack between the PC board and the driver and use an external speaker.

"As we evolve into the future of Amateur Radio what do you think we will
invent? Will the ARRL have new interplanetary DX entities? How do you envision the typical Radio Amateur in 2050?"

Hams were at one time known for their ability to tinker and put together a radio literally from a box of parts. New equipment has become so sophisticated and controlled by IC's that there are few opportunities for the basement tinkerers to really build something from scratch these days. By 2050 I suspect the opportunity will have completely gone. There will be plenty of opportunities foe EE's and others with similar training to design and build communications equipment in the lab however.

I'm not sure there will be a need for a licensed radio amateur in the year 2050. The hobby is all about communicating with others over distances from 100 to 5000 miles away. Although the telephone certainly improved access, amateur radio gave many access to people around the globe. The world of communications has changed since the 1950's and there are numerous ways to communicate over great distances that do not require a license. The internet, email, VOIP, cell phones, satellite radio are but a few of the newer technologies that do essentially the same thing that amateur radio does. Provide access to people and information about the world.

Safety around lethal voltages was at one time a very good reason for licensing radio operators, and it still is. Unfortunately for the hobby I think that by the year 2050 most people will have figured out that they don't need potentially lethal equipment and the requisite license to communicate with people and otherwise get information about the world. There will be too many other competing options that require no license.

And the ARRL? Well, it continues to function very well as the gatekeeper for this hobby. It seems to be most interested in requiring outdated tests for radio licenses and otherwise holding on to a static image of the radio hobbyist. It's unfortunate that the ARRL sees it's mission as one of keeping the unkempt hordes on the far side of the gate. It should instead be looking at new ways to entice younger members into a hobby that needs to be opened up.

Thanks for the invite. Sorry to hear about the storm damage to your shop.
I was lucky here in Lakeland. Jeanne was the worst of the hurricanes for us
but all the damage I suffered was outside - trees down in the back yard,
fence damage, etc. I still have the lower portion of a large elm lying on
my crushed storage shed, but there's not much of value in there.

WFLA TV (chan 8/Tampa) was a good info source during all the storms, WFLA
radio was decent, and I have several scanners, so I could monitor local hams
and public service agencies around the area.

I'm sure members of this group would be interested when you get your shop up
and running

Best regards,

Greg

An unprovoked nuclear first strike may, just may, have raised a few brows worldwide. An almost unanimous world wide embargo against trade with the US would have followed. Israel would continue collecting welfare from the US taxpayer and continue on, business as usual.

Those old tube type radios are the best,esecially if they have wooden cabinets and usually they will pick up longer distance AM stations better too.(I own some tube type radios) Set a plastic radio or a plastic radio with digital/lights/readouts out in the hot sun or on the dashboard of your vehicle out in the hot sun and watch them go completly to RUIN! Let electromagnetic radiation zap tube type radios and they will stutter along for a while and then come back to life as though nothing ever happened,just as good as new.Plastic transistors shit isn't worth a shit! Them Eton plastic radios that some folks were talking about how nice that plastic looks! BULLSHIT!

** CANADA**

MEET PROMO GIRL: THE VOICE THAT HAS STEPPED OUTSIDE THE CBC RADIO BOX
-- by Elizabeth Payne, The Ottawa Citizen, February 19, 2005

http://www.canada.com/ottawa/ottawacitizen/news/styleweekly/story.html?id=39ff0669-4ff7-42fd-9346-adf55824c5ae

Dear Promo Girl

Imagine you are listening to the radio, minding your own business, when a persistent voice seeps out of the box and into your head. Imagine that, instead of absorbing the substance of the voice's message, you become fixated on its style. Where did that voice come from, you wonder, and who is the person attached to it? Is she younger than me? Is she being ironic? I thought I was just listening to CBC radio, is there something I'm missing here?

Imagine, Promo Girl, that someone younger and chirpier has taken control of your solid, predictable (OK, sometimes dull) radio and that it hasn't quite sounded the same since ...

At least that's how it feels ever since Promo Girl became a regular part of the CBC Radio 1 broadcasting day. There she is, her quirky, chirrupping voice giving us a heads-up on what's coming up later on the Mother Corp's daily schedule.

"So the world has ended, a guy's still got to keep busy ... " She pops in between programs throughout the day, waking me up from whatever CBC-induced REM state I'm in and breaking into my consciousness.

Is that a smile I hear in her voice? No, that's just her style; she's happy, she's a bit rumpled, she was up late chatting with some girlfriends over a few glasses of wine and has not had time to completely pull herself together but, hey, those sort of details don't bother Promo Girl.

Promo Girl is, in fact, a figment of CBC promotion's imagination. The voice belongs to an actress (who remains anonymous), and the persona is pure fantasy. Still, she is quickly becoming a very real part of CBC Radio. And listeners, like me, are asking ourselves: What does this mean?

Chris Boyce, an executive producer with CBC's Saturday afternoon variety show Definitely Not the Opera, helped develop Promo Girl. The network was looking for someone who would give a "consistent sound and tone" to its on-air promotions, he said in an interview from Winnipeg. What they didn't

want was some "voice of God" announcer popping in between programs to talk about the daily schedule in deep, ringing, intimidating tones. They wanted someone more casual and engaging.

Read: Someone who would appeal to that coveted younger listenership. "We wanted something that wouldn't sound like every other broadcaster ... that would cut through the CBC Radio 1 program flow," Boyce said. The concept was launched just in time for the network's summer season last year.

"We were looking for something that was playful, fun and summer-like ... There was just something about her that jumped out of the the radio and felt like summer." Promo Girl was born.

Well, actually, the name wasn't born until the voice began to develop a character. It was the actress who first began calling herself Promo Girl. And the name it caught on.

As if to underline the fact, Promo Girl are among the first words out of Mark Thompson's mouth when I contact the manager of English radio communications. "So you want to do something on Promo Girl ... " he says.

Thompson tells me that Promo Girl, in less than a year on the job, has gotten a "terrific" response from the public.

"People seem to love her," he says, although he acknowledges there are also those who "absolutely hate" Promo Girl. "She gets inside people's heads." No kidding.

That is what got me thinking about Promo Girl. I don't absolutely hate her, although you don't have to look far for evidence that others do. One chat room participant said he switched to another radio station because he couldn't stand hearing Promo Girl's spots. "CBC's Promo Girl is not only annoying, but the tone and content of her promos often is (sic) inappropriate for the program being promoted." Another placed Promo Girl fourth on a list of Most Annoying Canadians. She landed behind Don Cherry but ahead of Celine Dion and that smug Canadian Tire commercial guy. Ouch.

Which is a bit unfair. She's not annoying. She would be quite endearing if I had met her in a sitcom or on the pages of a paperback. But I'm not so sure I want to share radio time with her.

I hate the way she gets inside my head and hijacks my radio listening experience. One minute I'm passively listening to the comforting drone of interviews mingled with low-key small talk, wondering whether we can all stand pasta again for dinner, the next minute Promo Girl is sticking her head out of the radio and speaking DIRECTLY to me.

Suddenly, I feel as if I am not alone. Someone is listening to the radio with me, and she sounds like she wants to be my friend. She keep asking me questions as if she might actually expect a response.And then there is her voice. It sounds young, but its main characteristic is that it is hip. Promo Girl has a youthful hipness that can sound incongruous when she's promo-ing Quirks and Quarks, say, or a serious piece of journalism.

None of which are huge problems for many listeners. "I love Promo Girl," one chat room participant said. "She sounds like a real person with some of the natural idiosyncratic unpolished timbre that you don't hear from a smooth, professionally-trained beauty voice."

This is true. But was is really gnawing at me about Promo Girl is the post-Seinfeldian irony embedded in her voice. That's CBC radio, she seems to be saying, but this is us, and we're younger and hipper than all that. We see the world differently.

And, ever since the days when I munched my peanut butter sandwich while CBC Toronto offered its lunch-hour agricultural reports about beef and pork futures (I can still taste peanut butter when I think of the words "choice and good ones"), I have viewed CBC Radio as the home of those older, wiser and with better pronounciation and grammar skills than I.

Promo Girl, with her Americanized vowels ("9:30 in Newfound-lay-end") just hammers home something I have been trying to ignore. I'm dated. You know when staid CBC starts sounding hipper than you, that you are over the hill. Sigh. Thanks, Promo Girl, I'd like to get together for drinks sometime, but it would probably be past my bedtime.

Elizabeth Payne is Style Weekly deputy editor. Her column runs every second week. &#65533; The Ottawa Citizen 2005 (via Bill Westenhaver, DXLD)

Personally, I find Promo Girl exceedingly annoying! 73- (Bill Westenhaver, QC, DX LISTENING DIGEST)

Maybe he didn't - it's possible someone else took him out. But I've
read his stuff and read a lot about him over the years, and honestly,
I'm suprised he didn't kill himself sooner. He was a genius, but he was
also as looney as a screen door on a submarine.

I suspect - frequently - that sudden, unexplained suicides are often
the result of a very grim bit of news the deceased got at their most
recent doctor visit.

Tony

> You aren't free to express your thoughts - IF they don't meet the
> politically correct mold - especially if your thoughts and speech happen
> to deny the holocaust!

...it ain't nice either if the communiques Zundel used were specifically
designed and coded to do an end-run around plain speech
understanding, but yet intended to incite violence and a hatred of Jews
in general.

> Hasn't there been one or more folks arrested in Germany for a book they
> wrote in the U.S?

Yes. (The rub however was that they also were German Citizens
who were producing pamphlets, fliers and books from within the
USA, specifically at the HQ of a well known hate group, in the
German language for covert shipment into Germany. When these
shi+heads went back into Germany the authorities were waiting
with open arms and handcuffs......)

> Well, Here's one whisked off to Germany, from Canada, so they could face
> the charge of denying the holocaust!

In case you were not aware of it, Ernst Zundel
is a GERMAN CITIZEN. He is not a Canadian
Citizen. He fled to Canada on a visa about a week
before he was to be picked up by the German
Authorities on Political Incitement charges.

Germany has been trying to get him extradited for
Years, and it finally came thru today. That's all.

(I also assume you didn't hear on this evening's news also
that a Federal Judge in IL had her husband and elderly mother
killed in her home because she ruled against the leader
of another related Domestic hate group, the World Church of The Creator.
So you see, people like Zundel are SCUM who need to be
locked away in a 12 by 15 where their ideas cannot further
incite these two or more goons who killed members of
this Federal Judge's family as a reprisal.)

Nice people that Zundel and his racist goose-stepping ilk are eh...?

(I wonder if all the domestic broadcasting shortwave
radio kooks will be moaning over Zundel over the

comming days ?)

All I know about the name Frontenac is that it is a French name and the name
of the guy who founded this town.

247. Hams are killing ham radio.

Newsgroup: rec.radio.shortwave
Date: 2005-03-03 02:30:17 UTC
From: Ric Trexell <rictrexell@vbe.com>
Message-ID: <112cth46hmajla2@corp.supernews.com>
Source record: 9781

I was reading a few of the posts about how there will not be a need for ham radio in the future due to all the new ways of communicating. That has a lot to do with it but I think the biggest problem with ham radio is the hams themselves. CB'ers killed CB'ing with bad language and hams are doing it with those stupid contests. I remember as a kid getting my first SW radio and listening to hams talk about their lives and the area that they lived in and stuff like that. Now when I turn it on I get guys talking only about their radio or calling CQ CQ contest. Then another will come back and say they are 5 and 9 out here in Kansas and soon the guy is calling CQ CQ contest again. Does any one think that people are going to invest in a radio and all the learning to do what are nothing more than fancy radio checks? If that is what the ham bands are going to be used for, then I say turn them over to business and telephone radio freqs. Ric.

Are those spreader arms metallic? Looks to me you went through the
trouble to insulate the loop wire from them. The metal arms will mess up
the fields around the antenna. Switch to something non metallic in that
case.

It doesn't take a whole lot of smarts to operate the typical tabletop, or even to operate the typical transceiver. The early hams, like in the 1910s and 1920s, THEY were smart. But today? Any moron can pass a simple test and get a transceiver and raise hell on the amateur bands, as a couple recent cases of interference chronicled on this group show. 80 years ago, you needed to know a good chunk of radio and electronics theory to become a ham, THEN you needed to know how to turn a wire coil from a Ford Model T into a working MW receiver (not as easy as it looks). Today, we have "Push To Talk". As long as you can pass that test, you can buy an "appliance" transceiver and the FCC washes their hands of you unless you take out every repeater within 1000 miles of Los Angeles. I'm sure there are still smart hams out there. I'm not attacking you guys. I'm attacking You Know Who who thinks that having three Drake tabletops makes him Big Man On SW. I notice that he doesn't even bother to get a ham license, and he thinks he's so smart because he has an ANALOG world time clock. Whoopee.

Cuhulin probably doesn't know what an IP number is. Anybody who would
brag about owning a Webtv is stupid. I remember trying to download
websites on a black and white Mac with a 9600 baud modem. Hell, I
remember trying to negotiate the net using Unix. Quick, cuhulin-what's
Unix? Don't know? Figures.

259. GET QUICK MONEY EASY AND LEGAL HERE!!!

Newsgroup: rec.radio.shortwave
Date: 2005-03-03 03:17:03 UTC
From: russellbritney@aol.com
Message-ID: <1109819823.363424.48490@l41g2000cwc.googlegroups.com>
Source record: 9791

Date: FEB 2005 Author: B. Russell Subject: MAKE QUICK EASY MONEY FAST! EARN LOADS OF MONEY, HONESTLY, FAIRLY, AND LEGALLY Greetings All, MAINTAIN DISCIPLINE, HONESTY AND PATIENCE...Above all else FOCUS! I found this on a bulletin board and decided to try it: A little while back, I was browsing through news groups and e-mails just like you are now, and came across an article similar to this that said you can make thousand of dollars within weeks with only an initial investment of $6.00. So I thought, "yeah right, this must be a scam," but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the six names and addresses stated in the article. You then place your own name and address on the bottom of the list and post the article in at least 200 news groups. {There are thousands}. No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured, "What have I got to lose; except six stamps and $6.00 right, right?" Then I invested the measly $6.00. WELL GUESS WHAT?.....Within seven days, I started getting money in the mail I was in awe. I figured it would end soon, but the money just kept coming in. In my second week I grossed only $17.00. Several weeks thereafter I had collected approximately one thousand dollars. In each consecutive week I am averaging more than the preceding week and it continues to grow. Currently, I have made a few thousands and it is still coming rapidly. It is certainly worth the six-dollar investment and six stamps, believe it or not I have spent more on lottery with no returns. Let me explain how this works and most important, why it works.....Also, make sure you print this article out NOW, so you can get the information. STOP NOW: Print this article out so you can get the information you need off of it. I promise you that if you follow the directions exactly you will start making more money than you thought possible by doing something so easy. Suggestion: Read this entire message carefully, and follow the simple directions and watch the money come in. It is easy, It is legal, and your investment is only $6.00 plus postage. Important: This is not a rip-off, it is decent, it is legal; and it virtually without risk- it really works! If all of the following instructions are adhered to, you will receive extraordinary dividends. PLEASE NOTE: Please follow the directions EXACTLY, and 50-thousand-dollars or more can be yours within (3) months. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become a part of the Mail Order business. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, this money made from the mailing lists is secondary to income which is made from people like you and me asking to be included on that list. page one ere Are The Four Easy Steps To Success: Get six (6)

separate pieces of paper and write the following on each piece of paper. "PLEASE PUT ME ON YOUR MAILING LIST." Now get six (6) U.S.1.00 bills and place One inside of Each of the six pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the six envelopes and seal them with the dollar bill enclosed. You now should have six sealed envelopes each with a piece of paper stating the above phrase with your name and address written thereon [don't forget to enclose the $1.00]. What you are doing is creating a service-THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it. Clearly, I was a little skeptical and a little worried about the legal aspects of it all. Therefore, I checked it out with the U.S. Postal Service (1-800-275-8777) and they confirmed that it is indeed legal. Mail the six envelopes to the following addresses: [1] J. Force 701 SE 15th Street # 8 Ft. Lauderdale, FL 33316 [2] Myla Lette 400 S Kingsley Dr.#304 Los Angeles, CA 90020-3224 [3] Mrs. Florence Y. Moore 400 S. Kingsley Drive #304 Los Angeles, CA 90020-3224 [4] A. Person P.O. Box # 5156 Philadelphia, PA 19141-5156 [5] Andrew Biela 3776 Capitol Warren, Michigan 48091 [6] Britney Russell 1812 Garrison Plantation Marietta GA, 30060. Now take the #1 name off the list that you see above, move the other names up (six becomes 5, and 5 becomes 4, and etc.) and add YOUR NAME as number 6 on the list. Change anything you need to but try to keep this article as close to the original as possible. Now post your amended article to at least 200 news groups. (I think there are close to 24,000 groups). Page two All you need is 200, but remember, the more you post, the more money you make! This is perfectly legal. If you have any doubts, refer to Title 18 Section 1302 & 1341 of the Postal Lottery Laws. Keep a copy of these directions for yourself and whenever you need money you can reuse it again. Please Remember: That this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to directions. Look at it this way, if you are of integrity, the program will continue and the money that so many others have received will come your way. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. Also, it is a good practice to wrap the $1.00 bill in dark paper to avoid the risk of mail theft. So, as each post is downloaded and the directions carefully followed, all members will be reimbursed for their participation as a List Developer with one dollar each. Your name will be moved up the list geometrically so that when your name reaches the #1 position you will be receiving Thousand of Dollars in Cash! What an opportunity for only six-dollars ($6) one-dollar ($!) for each of the six people listed above. Send it now, add your own name to the list and you are in business. Directions For How To Post To News Groups You do not need to retype this letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select copy from the edit menu. This will copy the entire letter into the computer's memory. Open a blank notepad file and place your cursor at the top of the blank page. From the edit menu select paste. This will

paste a copy of the letter into the notepad so that you will add your name to the list. Save your new notepad file as a text File, if you want to do your posting in different settings, you will always have this file to go back to. Use Netscape or Internet explorer and try searching for various new groups (on-line forums, message boards, chat sites, discussions). Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You are finished You have finished your first posting. Congratulations! THAT'S IT. All you have to do is jump news groups and post away, after you get the hang of it, it will take about 30 seconds for each news group. ***REMEMBER THE MORE NEWS GROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!*** IT IS A MOST FOR YOU TO POST A MINIMUM OF 200. "That's It" You will begin receiving money from around the world within days. You may eventually want to rent a P.O. Box due to the heavy volume of mail you will be receiving. If you wish to remain anonymous you can adopt another name to use, if it agreeable with the postman to deliver the mail. MAKE CERTAIN THAT ALL ADDRESSES ARE CORRECT. Now the Why part: Assume for example you get a 7.5% return, which is very conservative. Please view the following estimated breakdowns page three Estimated breakdowns: When you mail 200 letters, 15 people will send you $1.00 Those 15 mail out 200 letters, 225 people will mail you $1.00 Those 225 mail out 200 letters, 3,375 people will mail you $1.00 Those 3,375 mail out 200 letters, 50,625 people will mail you $1.00 Those 50,625 mail out 200 letters, 759,375 people will mail you $1.00 By now your name has dropped off the list, but so far you have received at least $759,375. With an original investment of only $6.00 [plus postage]. AMAZING! When your name is no longer on the list, you take the latest posting in the news groups, and send out another $6.00 to names on the list, putting you name at number six [6] again. And start posting again. You have to remember and realize that thousands of people all over the world are joining the Internet and reading these articles every day, JUST LIKE YOU right now. So you can get $6.00 and see if it really works. People have said, "What if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest people who are joining every day and are willing to give it a try? Estimates are at 20 to 50-thousand new users, everyday, with thousands of those joining the actual Internet, Remember, play FAIRLY AND HONESTLY and this will really work. Sincerely, Subject: RE: MAKE QUICK EASY MONEY P.S. Hereafter, all confirmations of your name being placed on the "mailing list" will no longer be mailed to you directly due to the postage increase. You must have an E-mail address or access to an e-mail address to be notified of your name being placed on the "Mailing List." Don't forget to enclose an e-mail address along with your address. page four

Yes, some people are just to dim to put him in the kill file.

I think you should share the profit you are making from the Trolling in
the news group since everyone reading the it has to put up with it. You
should be paying for your advertising.

Let me know when the check is coming.

From what I have read recently in some webtv news groups lately,best guesstimates are there are about 600,000 to about 800,000 (it used to be about 1,000,000 or more) folks who use webtv,not even a drop in the bucket compared to how many computer users there are Worldwide and growing by the minute.At any one minute of every day and night,seven days and nights of every week,there are more and more computers being sold to folks who have never used a computer before.I seriously doubt if any webtv users are screwing around with harvesting anything from www.cryptome.org Our webtv boxes do not have hard drives,we can not download anything even if we wanted to.

273. Cell Phone Users are Killing Everyone

Newsgroup: rec.radio.shortwave
Date: 2005-03-03 04:37:30 UTC
From: "Dr. Artaud" <NoSuchThing@Notreal.com>
Message-ID: <112d54a5ebkbk97@corp.supernews.com>
Source record: 9859

"Ric Trexell" <rictrexell@vbe.com> wrote in news:112cth46hmajla2
@corp.supernews.com:

> Ric Trexell

Ric Trexell, I suspect that a deficit in your abilities are more responsible for your inattention to Amateur Radio, and you justify your inadequacies by feigning indifference.

Similar to the child in a grade school classroom when the teacher calls for an answer to a question. The uninitiated child feverishly gazes around the room, as if he is to make the selection on which child to call for the answer, when in actuality he (though drawing more attention to himself), endeavors to convince the teacher to call on someone else.

I can imagine that the 2600 fatalities that occur in the U.S. every year due to people's cell phone use while driving will be greatly supplemented by expanding the ability of people to send ludicrous images and messages to each other all day long. Now there is truly a proper utilization of bandwidth.

Behold Ric, FACTS and A link to the facts, you couldn't ask for more:

"Boston, MA. A new evaluation by the Harvard Center for Risk Analysis (HCRA) estimates that the use of cell phones by drivers may result in approximately 2,600 deaths, 330,000 injuries, and 1.5 million instances of property damage in America per year. But because the data on cell phone use by motorists are still limited, the range of uncertainty is wide. The estimate of fatalities ranges between 800 and 8,000, and the estimate of injuries is between 100,000 and 1 million."
http://www.hcra.harvard.edu/cellphones.html
And you want to expand this? And you judge HAMs?

Is there a real need to expand business's access to the frequency spectrum? I think not. GMRS has largely been ruined by the "5 Mile Walkie Talkies" available at Walmart that people buy and give to their kids. (They require licensing, but in today's intelligent cell phone society, everything seems to be relegated to "toy status"). Businesses increasingly use cell phones for dispatching purposes and longer distance communication. Lastly, businesses (large industry) are moving overseas, decreasing the U.S. need for UHF and VHF communications.

Come on Ric, use your head for something more than ear separation.

Dr. Artaud.

http://www.drivenowchatlater.com/
Drivers on Phones:
Are twice as likely to miss a traffic signal
Their reaction time is slower to the signals they do detect
Their risk of causing a crash increases by 400%
This amount of risk is the same as if the driver were driving legally intoxicated
Using hands free equipment does not improve driver performance. It is the phone conversation that distracts!

I haven't heard Promo Girl, but this reminds me of the absolutely MOST ANNOYING radio commercials I have EVER heard. A decade ago in San Jose, California, there was a shop called Beeper City. It sold pagers in the days before cell phones were common. They did spots on local radio featuring "Beeper Guy" or as everybody at the college called him Beeper Dummy. They called him this because he had the most annoying tone of voice you've ever heard, and a hyperactive style of pushing beepers, like somebody who's taken too much Adderall for their own good. A 30 second spot on KMEL left you longing for the "DJ Girl" song (probably the most annoying pop song in history, but that's another story). It was like your ears ran a marathon with Beeper Dummy, and boy were they exhausted when it was over. "Beepers, beepers, beepers!" We were all about ready to go down to Beeper City and burn down their stupid little pager store by the time the promotion ran its course. But I'm sure that Beeper City got a lot of business from Beeper Guy.

http://radio.indymedia.org/uploads/psychological-warfare_.mp3

/ / "why should we afford the same liberties and privileges of justice to the Taliban. Like why should we give them the same rights we afford ourselves. They're the bad guys. Why do we want to do any favors for the bad guys." And really that's an irrationalism. And yet, it was there. You know, people go "you don't need any evidence, what do you need evidence for, they're guilty." And the rational, TRUE AMERICAN PATIOTS, would go, "no, no, no, that's wrong. We want to actually follow the crimes scene leads at the real murder scene to arrest the true evil doers." \ \

http://radio.indymedia.org/uploads/psychological-warfare_.mp3

/ / [Bush] wants to get rid of this, evidence requirement to convince ourselves of something. You know he's just going to live in his own fantasy world, while WE suffer the consequences for not speaking out for our equal rights to be heard, on these CRITICALLY important issues. Particularly when it comes to war. CNN they don't want to commit ourselves to covering the facts impartially, In fact they will work to mislead you soldier. not only will they not tell you about the hazards of depleted uranium, But they're not even going to tell you about these outragious crimes that are being committed [IN YOUR NAME] \ \

Please, I beg you, on behalf of my Humanity,
send this post to a Church for God of your choosing.

After making my defense public regarding an unshackled word, I realized they have decided not to attempt to convince a jury, that "sanctioned" acts, within any erotic depiction that were in my possession, were not then therefore proof, that I would condone myself such, as a twisted behavior in reality. [Ah, but how many others falsely have?] And, two, the total of images, that will be used against me has totaled to approximately 2300 of the 37,333 jpgs that were in my possession, 2300 to be argued, depict my life in an unfavorable light. Such as "Ukrainian nymphs"?, and Home Lolita. The Prosecution who would like to see me serve major

penitentiary time, [more than two years, along with psychological counseling on my appreciation of the female form, and my desire to know what is going on in the public domain as a political writer of the workings of, the human mind, sexuality, and the sadomasicistic victization of the innocent. Among other things. I believe the prosecution will SUGGESTIVELY use a statement that will be made from a NSIS agent, suggesting, he felt, there were -000 images he had chosen to be considered for indictment. A number that would must include every depiction of nude adults, fashion models, and French fries. The SAME individual who will also say, after reviewing all my writings, he found nothing that would indicate a legitimate threat against the original complainant, Our Mr. George W. Bush. Yeah, gee, let's make sure a jury doesn't catch on who Johnny is as writer of our world, and to what is truly going on in the court room of our laws we guess.

In my mind, there are maybe, roughly, 10 to 12 images, [deleted or otherwise] that could be argued as criminal depictions. Depictions I did not ever distribute, or even would have left without Deletion, THROUGH CONSIDERATION.

--

Oh my God.

This is the information regarding my criminal matter. I will tell you however, most of the intelligence officers I have spoken with, are not in disagreement to what I am doing. Not all though. I figure all I need is some media exposure regarding my position, and the result I believe, will ultimately bring to real justice, those responsible for 9/11, and the reversal of the un-American Patriot Acts. I have nothing to hide, and am completely open to any questions. I have big dreams it's true, but my dream, is where all Peoples are granted equal rights under the law, and where investigating journalists, are as straight forward and direct as you could be. I just finished the last day of my preliminary trial, where the video tape of me speaking on 9/11 briefly, was cursorily debated whether it was truly given voluntary. (the two Bush fan officers lied to me that I would be able to address the uncontended, standing irrespective of opinion documented evidence against the Bush regime, publicly reiterating what I freely spoke with the NSIS-RCMP and the secret service on, and instead, attempted to twist my/their comments on pornography, while ending the recording prematurely in midstream of me speaking. Speaking thus: On the fact that, using no crime scene evidence was the "top secret" documented plan reported on by MSNBC, a plan in writing used by the Bush regime, as a prerequisite strategy to gain access into Afghanistan. The Judge found the officers were playing "tricks", lying, but apparently, sighting a ruling by some other judge somewhere, this conduct was perfectly acceptable for our justice officers to practice in attempting to go after the found

guilty we presume?. The two police officers fundamentally undercut our national security interests, by turning out to be, as they confessed during my arrest, to be big bush backers, and in direct opposition regarding my public position on Afghanistan. I do believe however that Justice, as truth, will win out in the end.

The true American Patriot,
your friendly stranger,

Johnny Wizard

If you do not attempt to forward this document to anyone, and everyone else sides the same as cowards, my freedom will be stolen by the will of bushite, and our world will loose my ever valiant presence as sworn eternal defender. Not good.

You
decide.

--

Synopsis: I had been writing critically of the Bush Administration, when the Secret Service top secretly requested I be arrested for threatening the life of George W. Bush. They tentatively planned to have me arrested under the Mental Health Act to avoid a public criminal proceeding, but however during the process, I managed to publicly speak on local Manitoba radio for no less than forty hours regarding Bush in total, and was also well known throughout my community involvement in live theatrical productions I've been a part of for more than a decade. [I was Renfield in a stage production of Dracula, and I think I might be saved the cutting room floor in Woody Haralson and Robin William's new flick, "White Elephant" (I played a drunk white elephant.]

Hi everyone.

As many now know, through a bogus top secret warrant requested by one person at the secret service, passed to one Cnst. at the National Security branch of the RCMP, I had my computer property seized, not for the reason stated in the warrant, but to allow a trial/witch hunt to take place, in attempts to incarcerate me for a lengthy prison stint at the will of two self confessed ex-military bushite bombing, child porn pushers. When being arrested, I was asked if I would make a statement on the contents of my computer, I could then also use the opportunity to talk about the evidence against ------ -. ----. I agreed, but now the testimony ends abruptly before the actual closing. While the bogus warrant will be refused by the courts to challenge, as it has been deemed irrelevant, as a completely separate matter. You know?, how I come about to be in the, potentially life depriving court room? I can only pray a public jury will consider something fishy is afoot as foul play, when the matter isn't even allowed for our discussion as hugely relevant.

/ / As for written material or visual representations that advocate or counsel sexual activity with a person under the age of 18 years that would be an offence under the Criminal Code, the requirement that the material "advocates" or "counsels" signifies that, when viewed objectively, the material must be seen as actively inducing or encouraging the described offences with children. \ \

What is it in you, to judge such material as actual, to not then have it immediately taken to your own self as an automatic change in personal judgment? When you read of a faulting murderous character in a Ramsey Campbell book let's say, does such insight created, make you less capable in discerning you own deciding factor? The living state of fiction, is to remain as it always has, an unbound canvass of art through imagination. Johnny says: book burning is always wrong. In my case for one example of many that could end becoming thousands, the expert of experts, states without equivocation, a fully developed ample breasted 22 year old, with her shirt off, is between 10 and 12. And, through what they call "collateral" images, any legal nude picture of adults with claimed youthful features, or completely clothed children laughing, can be thrown on the heap of total to totals as an overall picture of my depraved character. Do they include my fantasy art collection? My movie poster collections? Animals from the wild? My guitar playing? My drawings? Or my written works regarding the documented crimes of the traitor, George W. Bush Jr.? Or how about, the picture of the Talliban sign in Afghanistan stating, selling heroin is against Allah's interest, so stop doing it cause it is officially outlawed everywhere here forever now, but for where the lying bush backed Northern Alliance partners are. The two ex-military cops involved in my case, are confessed supporters of the war action of indiscriminate bombing in Afghanistan. How can that be so? Only through the silencing of truth in our media circles, with their avocation of censorship in regards to me publicly speaking, do they escape public ridicule as dummies of the state in confusion.

The prosecution is seeking major penitentiary time on this first time offense, considering all the human rights positions I've fought heavily on a continuous basis internationally for the last seven years or so while discussing the inner workings of the human mind, and then there's the CRIMINALLY sadistic torturers I've advocated the personal arrest of, and then of course there's that, as everybody knows, bravely fighting global tyranny by bringing forward the documented, standing without contention crime scene evidence, regarding un-accountable as "lawless" George W. Bush's complicity in the crimes of 9/11 thing. [See, there can only be one Lawless, and that's spot is already taken by the one and only Lucy.]

As I've stated, Usenet services do not allow any participator in viewing imagery, without firstly, downloading the images. So, if your like many, you simply participate in using it's services, (of

which I'm unashamedly the largest in the history of Humanity as political contributor) and download something you would offer for immediate deletion if some phony cops with a phony warrant had announced they were coming on a fishing trip to see what they could nab you suggestively with, (all done 'secretly' to stop you speaking truthful about the documented crimes of George W. Bush Jr.,) is still not good enough though, because even if you didn't witness their 'professional' depictions offered, and just deleted everything glorious and beautiful, (just to be on the same fearful side of irrational totalitarianism), you'd still be charged for cleaning up your room to convey a good public impression. While child porn relationships are broadcasted on the national news to impressionable viewers. Again!, not to outlaw criminal DISTRIBUTION by practicing protections there, where factual evidence would be crucial in determinations, let's say with a cop full time monitoring a Usenet server, but no, as like in my case, a few offensible images, along with un-ending falsehoods on the age range of us consenting adults, or children being beautiful as clothed, or in swimsuits. I had 37,333 images of every description imaginable. And weather you know of everything on your, information warehouse of a computer system, guilty or innocent, the information system is still to be found worthy for police auctioning with the potential loss of your loving family, and the tentative spot on the greatest teacher achievement awards ceremony. Remember, rarely does anyone try to defend themselves on such charges, due to the fact, demonizing such individuals in our new bushite culture, is done before a criminal case is even heard. [like with 9/11 and Jay Leno] This is why I try to articulate my position now, before they perhaps, deny me an ability to speak in my own defense. I've spoken to a few lawyers, and almost none of them want anything to do with me, for my lack of big money, and the blatant fascistic nature of the, use to be, top secret warrant that the Crown can not possibly be un-aware of. Besides, in honesty, I am most capable of speaking in my own defense, if granted the right to say as much in normal speech. I don't know the precedents, however I'm learning, I don't know the tricks of the trade, but I'm counting on a human jury, and a little bit of public scrutiny. Does the Court support the ends and means of Justice, to not offer support to the 9/11 investigating FBI officers, by having me quickly silenced on their behalf through incarceration? I fear, if I am denied a public platform to express my defense, I will be railroaded into a situation where I will be refused an opportunity to speak openly. So, I come to the world now, as a safety precaution, to insure any attempted demonization of my better name later, will at least have this out here to counter measure. Please forward this post to someone somewhere please.

/ / Section 163.1(6) creates a further defence for material that serves an "educational, scientific or medical purpose". This refers to the purpose the material, viewed objectively, may serve,

not the purpose for which the possessor actually holds it. \ \

Under Canadian law referenced in the Supreme Court of Canada Sharpe case, it is acknowledged that if a public good can be shown, that the accused could have benefited by having witnessed questionable pornography, the crime then therefore, never really happened. (Think of it: who is the victim here?, the alleged ill thinking perceiver they want to send up the river?) The expert expert of experts regarding pornography in my case, who holds - out - official platitude after platitude regarding the personal investment he has made to advance his professional career in the illegal porn industry, comes truly from an alternate illusionary world, where everything that surrounds himself, looks like a young girl in a sexually explicit depiction. Can an appreciation for female beauty that includes nudity, be comprised of a definition outside of what someone else tells you your thinking then about committing a real sexual assault? Appreciating the beauty of people, doesn't automatically lead to thoughts of grunting sweats, like visions of cute little boys, fully dressed, doesn't turn the bushite automatically into a sadomasochistic homo, but then again, perhaps it does.

By exercising a right to perceive representations of that which is freely available, is of in itself, important to the sociologist, psychologist, concerned parent, and of course, the conceptualizing artist reflecting on our shared reality. For me however, in addition, the symbology of sexuality is a subject I've often danced with, and have even considered to hold potential solutions to why, or how, a sexually dysfunctional bushite, the enemy, can commit such criminal brutality against those they only know as innocent, (like a rapist or torturer does), while excusing it only on our lack of perceived moral outrage as the public, regarding their ungodly criminal conduct. Bushite are terrified of a free to be world, brought about by ourselves as a truth conveyor of ever lasting wisdoms. Why? One to one, we all make them as they are, cowardly weak morons, with not an ounce of manhood, honor, patriotism, or skill at independent free thinking. Their phony disguises or secret intelligence gathering capabilities, expose to everyone, their complete failures of stringing more than a few base words in the form of a question. Instead of facing their weaknesses, (as then creating an ability to become something greater,) they instead express their slavish dying hatred of a liberating People, a People committed solely to the principles of freedom as Justice for US all.

To suggest an image on my computer, could be construed to hold a explicit sexual element in the minds of some viewers, is not who my Court case is about. My case isn't about running a Girls being Girls website to attract business for some thing sly on the side. I'm not running a server for illicit materials sold as a perk to all new paying internet subscribers. It's about me, Johnny Wizard,

challenging the TRUE intent of a small few disgruntled bushite, who are in our names, standing beside me waving cuffs hidden in these shadows, appearing to work having me incarcerated by a completely bogus bushite warrant that was secretly alleged by only a single person to state, I'm "anti-government", with a proceeding, planned to put me away silenced, with mostly naked lies on their measurement for my thinking openly about this suffering world in which we all share uniquely.

Sure, It can be argued, that depictions of brutality taken during the nazi war, could provide sadomasochistic gratification to some wannabe fascist bushite bitches, but the freedom to express such films teaches us that the nazi soldier often without leadership as direction, had no true ability to respect the lives of any other. For they victimized any, as Sattler did irrationally to the entire Peoples of Fallujah, which include the now dead Marines spoken for as unimportant to the bottom line at being losers. Why must America die sacrificed for no better good I ask again, but this time, closer to an end.

Help me break into Our news media, or leave me all to fall victim to the further enslavement of the human condition.

Johnny Wizard

--

The Crown's Crown

/ / The EVIL anti-Christ "un-accountable to American law cos hees duh president" demon bush Jr., has ordered the commitment of mass murder in our names, while his enemy bush bitch cult following in the corporate news establishments, have refused our communities to publicly address the DOCUMENTED evidence made public by the FBI. Alleging, General Ahmad, bush's business partner, was "secretly" responsible for a wire transfer of 100,000.00 to 9/11's "ring leader" Mohamed Atta, and in addition, that the demon anti-Christ, Our Mr. bush Jr,, had a top secret CRIMINAL war plan in place, worked on with condoleeza rice, and implemented in part by General Ahmad, to criminally invade Afghanistan signed September 9th, 2001, provided to and reported on by Jim at MSNBC. All centered on not apprehending bin Laden, (prior, during, or after) as a prerequisite to guarantee invasion. (, to secure a liquefied natural gas pipeline for pension thievers Enron.) THEREBY, forbidding the apprehension of the true culprits through following the crime scene leads at the real murder scene. \ \

Damn. I am so desperately in need your help.

You see my friend, there are people in this world that deprive our rights to freedom, through unjust acts committed in your name, done by hiding their true intent from our public's view. One RCMP Cnst, was able to argue to a judge that my writing was anti-government,

and she needed to establish who I was, to enforce the law of, "threatening an international person". The warrant was to be made top secret, but through a miracle, was provided for my defense with a stack of bushite evil. I can successfully defend myself when speaking freely on the facts, but the Crown has deemed my voice inadmissible when it comes to anything in relationship to the bogusness of the warrant. The Crown is well aware that she holds the victims of 9/11 in contempt, but wagers, you Personally won't have the godly Humanity in yourself, to demand I face her politely, in the open, for our public good on national radio. If I try to speak of the reason I am in front of a jury, I will be found in contempt. While the very same guy who faked searching my computer for the single RCMP Cnst., was the same guy who searched my computer for child pornography. (Remember: through Usenet, images or movies are downloaded before getting to witness them.)

What did he find amongst 37,333 images?

OPENLY a woman of about 22 with fully developed breasts, is termed between ten to twelve, like of a woman's behind with womanly hips and pubic hair, ten to twelve also. And on and on and on, with those few photographs (I've seen no more than maybe 10 or 12 of), that would constitute an actual legal argument, thrown in to make it all look bad. Like a short video of a young girl standing in a bath smiling. The worst depiction they have is a video of several seconds, appearing to be a young boy being sexually fondled, but I certainly don't advocate such unbalanced behavior, believing it would be harmful in dealing with, as a growing up in through sexuality as the developing adolescent. So, knowing this then, what am I guilty of, that they are truly, as bushite, going to try to put me in prison for? Loving children? I didn't commit the sexual assault, take the footage, didn't distribute it, nor would I have kept it from deletion. Deletion doesn't even matter to these geniuses. They'll scan what you deleted, and charge you for that decision also. You can't win to continue going in silence. By continuing bushite fascist tyranny censorship for enslavement of our species, will suck for all concerned if you don't speak up for our rights denied NOW!

Think of how many curious seekers of youthful beauty out there the bushite could seek for demonization? They refuse to enforce the law regarding distribution. It would be nothing WITH A TRUE LEGAL JUSTIFICATION to block a site, or scan free public access Usenet for truly illegal materials.

But they don't.

So what the single RCMP cnst has done, is LIED about the true reason for obtaining the therefore bogus warrant, for she has refused to enforce the law on which she argued was the reason to be granted my personal belongings. The refusal of the fascist enemy bushite to charge me for the alleged criminal matter, would surely

get George W. Bush arrested, tried, and rightly executed for 9/11, and then, the war of terrorism would be over. My writings on behalf of police investigations made public, and Jim at MSNBC, along with the documented fact demon bush used no evidence whatsoever in his allegations against bin Laden while closing criminal investigations, have been deemed by the, protect the demon anti-Christ at all costs Crown, as inadmissible, along with my essays in psychology and sexuality. When receiving my computers, a Cnst. --lling was told to look for the phrase, "bush is dead", he stated because the term wasn't found, the warrant couldn't be fully carried out. The quotes however in the top secret, nobody was suppose to see it, warrant provided to the judge, were from "The Trial and Conviction of Our Mr. bush Jr.", and none of the quoted text, contained "bush is dead". Then, on top of that, when they seized my property, I told them exactly where my writing was located. And proudly confessed to stand on the principles of Universal Justice, in serving for America's best. Instead of defending our rights, they are, as cowards, and what true fascism is, attempting to help flee, those responsible for the terrorist crimes of 9/11 back in New York City. And don't you think for a second, the Crown involved in my particulars doesn't know that. An enemy of Justice is our Court in knowing directly with the evidence in front of everyone, they sell out honorable FBI officers for death, all to please the false deity G.W. for YOUR losses too my American friend. Please, again, I beg you to help my cause, the cause of every true patriot soldier, and grieving mother. To be left without Justice for Humanity in silence, is to do an injustice no real man should want to see happen quietly to another. Once I'm silently convicted, you'll be too late to help be my witness. And if you knew my mother, you'd love her too. So please, I beg you, forward this to your favorite journalist, get on Coast to Coast, get on CBC radio or on Winnipeg's local CJOB, and demand I be allowed to face the bushite false accusers wide OPENLY in our public arena. They don't let any of us on now when we speak of General Ahmad, Afghanistan, Iraq, Enron, Social Security, Health care, and on and on and on, so your gonna have to get a little more forceful with your super human will power against the melancholy return of same old nazi fascism. I shall try more from here also.

Help life out some won't yah?

--

Release the Press

In regards to Johnny's criminal charges.

Being in possession of that I know not of until it reaches my computer, puts the onus on the distributor's server to be held in the same regard equally. To argue for criminalizing the possession of materials that are granted full legal rights to be propagated, as not for sure either way then, but now that they're multiplied to

others, makes little sense. For, it only increases a problem that will end up costing the public a great deal more to deride, if the said material is found to be, without reasonable doubt, objectionable from a legal framework set of criteria. Instead, in my case, they've used every impractical assumption regarding the content of what I may have witnessed. I am beside myself dumfounded to learn a picture termed of a topless youth smiling, is a sight the officers involved wish to draw me with as evidenced pedophile. A term classified to include dehumanizing personal acts of sexual assault against the rights of actual children. This is unacceptable. And, I will not be found guilty of approving such conduct. As to other depictions of cruelty I've witnessed by information gathering, I can say without doubt to any as a seeker of injustice, has motivated me personally as a public figure, to take direct steps few others do in defense of the innocent. Unlike the two officers who are my public accusers, I don't believe indiscriminately murdering people by bombing a country brings about protections for those involved for example, and yet, my accusers proudly stated, they were supporters of such unprovoked, and unwarranted ILLEGAL criminal conduct against our children left undefended under their limited bushite haze.

Nothing will bottom this episode of my life, where as a lover of children everywhere, and a champion for human rights around the world, am judged not fit for freedom by a couple expert, pro-war "liberating" bushite bombers. [they both survived serving the military before taking up this police business as Bush supporters for lawlessness - (they PUPOSEFULLY sabotaged, the planned video recording of public evidence against Bush, that I made to the National Security Division of the RCMP in writing, and in approximately, ten separate audio recordings. [Oops...])]

The bushite bombers searched for depictions of behavior sexually impressionable readers could arguably, lose their self respect or control over, but can be found by any desperate conniver, searching in depictions of a rape scene, naked people on a beach, or in a cloud storm. So, some guide lines on how best to stop their depictions of the rights of children being breached most definitely, should be handled where the questionable material emanates, not with the quester of good taste, out looking to see what is widely, and freely, publicly available by the thousands. Again, not perceived until within the possession of the observer to witness. The classifications of all that is accepted to include in the definition of "child pornography", should not include the beauty of what it is to be nakedly human, or normally affectionate. But that is being open, honest, and beautiful, traits an advocate of tyranny through censorship will run and hide from, for they fear the private human element in our public political affairs speaking freely. Bushitism. [Think of Life, a struggling to survive for better times profiteer, and ourselves, a distant relative nobody's ever heard of till now at most.]

I've been a widely published internet psychology columnist, almost since ideas have been broadly shared as such. And my writing testifies to the subject of human rights denied, as the struggles I attempt to find, real solutions for. The artistic impressions created by the artist, like the words defined within this sentence of words, is but streaming reference points to the larger unbound projections of the manifested mind. A defined, definite conclusion on it's meaning, loses it's truer state. Recognizing the subjective relationship on communicating through media, is ultimately the reader perceiving this conclusion. It is not therefore a conclusion the reader becomes for, but is held in consideration, when creating it's over all pretext, in the form of personal insight or imagination. An imaginative state of fiction, does not preclude it from still being, a shared artistic work suspended through disbelief. I can read a fictionally exciting murder mystery, all the while knowing, the characters who suffer misfortunes, are not living worse because of me, nor to learn the reasons someone is obtusely perverse, make me then, more inclined to disrespect real living, in a similar kind. [read anything from corporate media challenger, the lover, Johnny Wizard] The actions of a character in fiction, does not compel me to give up my own belief of reality, or a respect I grant in those who protect the rights of any child, or adult for that matter. I have many written works for example from those who accolade Bush as of unprecedented prowess when it comes to believing in the holy scriptures, but come on, who believes that make believe horror show, and how did I get to know people could be so deceived without knowing the indisputable consequence of Bush's deliberate criminal actions? The opinions I hold in reference, are not opinions I just automatically except as my own without thinking for myself in other words. If America witnessed without censorship the vicious evil bombing of God's children in Fallujah or Samara, or the torture of innocent people to death by liar Bush's satanic sadomasochists, every bushite repuglicon who voiced political support for the irrational murderous acts, would be hunted down by millions of armed America men, tried, convicted, and executed in time square, that we all know for certain without room for question.

/ / Expression that degrades or dehumanizes is harmful in and of itself as all members of society suffer when harmful attitudes are reinforced. \ \

But does the witness of such a relationship, granted only to the mind of an officer? Harmful attitudes depicted in Nazi film archives, works of fiction, or artistic expression, does not every time, have us rooting on the bad guys. For if so, police officers investigating harmful child pornography possession, would be left without an ability to even discern a care for any one. But they would and do care. We can see a need, and a honor to defend the rights of children, and I can't think of a more noble police position, to try defending those principles to the best of our ability. Not infringing on free thought access of everyone because

some are arguably, more impressionable to the false view of the bushite conspirator. DISTRIBUTERS of illegal material is where the law should not be denied a place to practice. Making criminals out of what someone picks out in coffee grounds, is to say, some thoughts considered, are thoughts better left alone as forbidden when alleged thought of. That is where no god or person should be allowed to falsely determine for our selves, with what words can be thought "about", and what words can not. Of course threatening the freedom of another living individual with the law, better be based on the tangible as documented offences, otherwise, our rights wouldn't be publicly challenged for protection, but of denial. So Hammurabi came up with: A person accused of a criminal offense without any evidence is innocent, and the accuser, especially when it comes to capital crimes, is the bad guy every time. And gee, if America does that, Mr. bush Jr. could go to jail from Canada, China, or perhaps somewhere off somewhere's else where they have laws enforced against the crime of murder.

I am a behavioral psychologist, who's not only written on psychology's pillars of understanding, but also on the struggles of lawless war committed by sexually dysfunctional sadomasochists. I was interested to watch The Learning Channel's special, The Meaning of Love, a four or five part series, hosted by "The Naked Ape"'s, Desmond Morris. This world's most recognized, widely publicized human behaviorist, reporting on juvenile properties of mutual expression between lovers, lending well into nurturing a caring relationship for each other.

Therefore, is a reader of fiction regarding adult themes, going to read all about who get their toes piggy wiggled, or the professional accountant, who at spin the bottle, becomes the lucky "loser" of a sound deserved spank or two, secretly though, underneath it all, a pedophile who thinks unclean thoughts? Examples of sexual boundaries: Is not a heterosexual, secretly gay when they play with themselves that way? Perhaps a trans cross dresser? And some men may relate to this, but man, lesbians are a dream come true. But then... well, your a guy too right?

Such normal dynamics of continuous change through development within relationships, can not be denied a place, as being mutually beneficial as human in quality, (and maybe fun,) and being, private, none of our business, almost childhood like high jinx of that moment in time. But, leaves a, any person public view of definite acceptance, intolerably immature as inappropriate across the public spectrum. Publicly get into the intricacies of private relationships with your new book why don't you with the Court now John, you have all our ears a-flutter. Grandma doesn't need to know about your proficiency at.. and I'm not the same to Dick as I am to Jane, if you catch my drift.

While two male bushite, who are now helplessly stuck appearing plastered to protect Bush from arrest for mass murder through the advocation of censorship by tyranny, could quip to us being lovey dovey, means your ripe for picking on as, the soft and mushy easy push over in the corner they see. Me? This is why bushite think allowing brave men of our communities to speak openly as would be, calmly, against the criminal dictums of the demon anti-Christ, shouldn't be allowed, because they know, the world would then recognize them for the cowardice and betrayal they hold of our human spirit. A spirit that craves for all, the end to the continuing neo-con wars with the freedom to love Life for being truly ourselves. I see life everywhere, for trying to make some happiness and prosperity. If only we would listen to reasons for believing in creating a better world where life in cherished, is a world where bombs don't drop indiscriminately from the sky in God's name left for blame by the thieving liar bushite scoundrels.

The inner world of artistic creations by story line, is a world of pretend make belief, forwarded by the observer's conclusions. I am concerned to read struggles for entertainment, to include, cruelty against anyone for sexual gratification, but all literature regarding such, does not change my respect for the rights of others, especially those of children. If anything, it makes me more concerned on how respect for another can be better served by the powers and freedom of the unshackled word.

I've seen more child pornography on the television news regarding child pornography, than I've ever mistakenly got through the internet. Providing illegal depictions for public consumption, is where the law should be exercised, but it's often not on the grounds it doesn't prosecute as many. See my point? The FBI did an expensive child porn sting, running for two years in total I think it was, and in that time, they gave away tens of thousands of images to thousands of, who knows how to copy customers, that much later, the FBI would argue were illegal to have possession of. That is like a huge wasted effort OF OURS to distribute such offenseble materials, particularly if it was sold as, "teens in action", "youthful beauty", "buttercups", "a day at the dentist", or something of some sort to entrap more crime business. For our police agencies to set exact criteria on what would constitute child pornography, and scan internet traffic for such distributors, would be far more effective in halting such proliferations. They don't largely because, they'd have to be more precise in determinations, and therefore, many would lose their jobs as then redundant. By not doing so, we can pay billions to have people arrested, labeled pedophile for witnessing depictions of God's beautiful children being normal - while then pleading guilty to avoid the public tarnish such new bite revelations would bring. Destroying families, and future job prospects of individuals such as myself, who hate the thieving, murderous, ignorant as truly ungodly bushite liars to the core of my eternal being. Currently, our legal services, can't help but learn, bush did 9/11 with

General Ahmad, and are left speaking "nothing" too - in news public suits regarding the injustice they're recorded not to answer about. Instead, a couple confessed bushite, will conclude who ever witnesses depictions they suggestively reach for as inappropriate, to not possibly also, hold children, and their rights, paramount. Well, that's just simply not true. I call for the arrest of those that ran d squads against only known as innocent families including children in Afghanistan, (Tenth Mountain Division), what do the, two self confessed once blind Bush worshipping police offers, who stand as my public accusers as job requirement, have to state on that denial of our rights to cherish life and liberty? As bushite bullshiters, they don't want to answer to not presently asked public media enquiries, because being "embarrassed" sadomasochists, they then may likewise, get off on accusing community members to be pedophiles, with flimsy examples of what, in their minds, in an insult to our sworn values. Children can be beautiful, but certainly aren't, as adults, interested in being so naked, on the six o'clock news. Do they care to make a scene bigger than it first appears? Imagine me hosting the evening news and the Johnny Jamboree, hashing it out with my opponents on the tough questions, rolling with the insults and the cash offerings, while taking time to sample the world's "best" pizza an beer joints?

Or, do they adroitly believe, they'll teach that Johnny image something or two on their own behalves for our Humanity?

George W. Bush is primarily motivated ultimately with how much they can sucker out of our public coffers, thereby in spirit, advocate censorship on my calls for traitor bush's capture for 9/11.

What they are doing is this:

My "official" court case, (Involving all good people I believe) is enforcing our Law by suggesting everything in my possession can be isolated, onto itself, and made into something I'm not of entirely. All the while pretending, we ain't at all aware of Usenet servers, or my, Johnny Wizard saves the World writings of DOCUMENTED CRIMES AGAINST YOUR HUMANITY. Writings that dominate the interest of the whole investigation, locally, and internationally. But gee, without your help, two bushite "coppers" are going to appear still pressing that bush not be arrested in their contempt of silence, while praying, I not be granted a moment in my trial to speak for my own defense literally. Well, maybe not, after all, we all change with the times. My last conversation with the said two, was quite a way back when they were asked to prosecute Johnny Wizard, and likely came back with the reply, Johnny Who? So, let's not kid ourselves, my words are quite amazing when you think about it. Well, I'd hope in these last days, before this coming media flop, they've taken it amongst themselves, to get together with the loving family to discuss anyone of the hundred or two, Johnny

Wizard works of the world, and conclude, George W. Bush is truly bad news to their world's view too.

Even.

Well.. how a you been doing anyway? Are not these developing story lines to be something good going live mainstream... will we demonize the principles of Christ, in censoring ourselves like the individual person of Johnny Wizard is to be, as, being denied personal freedom by "unaccountable" George W. Bush's dictatorship of tyranny through enslavement of the human species, or, will You consider the equal freedom of a telephone call, a cassette tape recording, or perhaps, photo copier to bring us around this, we want our still living rights heard too man. Right now before we alls go it to the clink. Coast to Coast should be broadcasting for America's interest, by openly discussing the still paying costs of the bushite war crime business.

America! - bush's war is something you do not want to lose to in further dying silence. Take it from me. Be a hero. Dream of the babes! - Movie deals. Lives saved!!!

Business is business.

Look you might not care for me personally, okay, but this George W. Bush's treason of nine-eleven is an evil we together, will never, be too weak to stand against as. As indecisive humans without a leader, we will never be too few from demanding Justice be served in respect of Humanity's interest.

In nabbing those who committed treason against our America's America on 9/11, needs to be completed by firstly, following the crime scene leads at the beginning with Bush's prior 9/11 plans worked with the ring leader's financier, General Ahmad, and how Condi, rumsfeld, and Cheney with Myers, fits in the picture together as likewise traitors. The Iraq war is also a crime against humanity. All stolen monies and property must be sought, then returned to a legitimized democratic government. Torture is outlawed, and finally, all innocent people held in prisons by bushite forces, held without out charge for trial, need to be released immediately as ourselves being denied liberation truly. Let common sense prevail.

Your Kingly King of a Dreamer's dream,

seriously considering prison time to be,
a major downer for my chances at partying,

Johnny Wizard

P.S. TELL SOMEBODY!

---

for all mankind...

The EVIL anti-Christ "un-accountable to American law cos hees duh president" demon bush Jr., has ordered the commitment of mass murder in our names, while his enemy bush bitch cult following in the corporate news establishments, have refused our communities to publicly address the DOCUMENTED evidence made public by the FBI. Alleging, General Ahmad, bush's business partner, was "secretly" responsible for a wire transfer of 100,000.00 to 9/11's "ring leader" Mohamed Atta, and in addition, that the demon anti-Christ, Our Mr. bush Jr,, had a top secret CRIMINAL war plan in place, worked on with condoleeza rice, and implemented in part by General Ahmad, to criminally invade Afghanistan signed September 9th, 2001, provided to and reported on by Jim at MSNBC. All centered on not apprehending bin Laden, (prior, during, or after) as a prerequisite to guarantee invasion. (, to secure a liquefied natural gas pipeline for pension thievers Enron.) THEREBY, forbidding the apprehension of the true culprits through following the crime scene leads at the real murder scene. See, with a talk radio program we could take calls and help any others who have some difficulty in understanding the logic of reason, as super simple thinking.

So, as many know, the bush regime is FOR REAL pushing still to have me incarcerated for speaking these truths, truths that stand irrespective of my personal opinion, or spin doctoring. Will you, as a complete stranger, but a fellow lover to life, help my cause by requesting also, I be allowed to face publicly my accusers on the, censorship for bushite tyranny radio networks Coast to Coast, or CBC national radio here in Canada? Before, god forbid, a couple, once self confessed bushite "police officers" of tyranny, (death squads against school kids, happy funders of heroin pushers, and who in silence, work getting un-informed soldier teen/bushite sacrificed as the bad guys for Bush's thieving. Done all to gloriously please the fabulously wealthy, safe at home from the clutches of power, neo-con "Cabal" of enemy traitors.) get lost in the translation. The fascist corporate interests are likely not going to factually report on my trial, but attempt to demonize me with their falsehoods and betraytals against our communities, that is now presently on going without your voice also heard raised yet for objection. A trial, where the evidence that factually establishes bush guilt for treason against all the American People will be sought as immaterial. What the evil enemy as godless bushite dogma blindly hope for is, a silently feared coercion through suggestive threat against Our entire Justice system, leaving the court to have quoting perhaps, only one or two lines written by myself out of context from "The Trial and Conviction of Our Mr. bush Jr" to a jury, while disallowing the documented facts, surrounding my allegations to be refused as my defense. [the criminal leads

end at the bush administration's door step with bush's own signature, but bush, as Presidente', can't be arrested under American law, only impeached by the majority of already bought out and sold whole repuglicons.] Counting that our community of peers will have not a inkling what is contained in the very first paragraph of "The Trial...". You my friend alone, you alone, could help US change all that. I, as a single person am trying to stand on the principle, that ANY individual, that is accused of a capital offense without evidence, is UNIVERSALLY INNOCENT, as they would be tomorrow, today, and way back in Hammurabi's day also. And that by reason, the false accuser, is the number one suspect to start with. The enemy bushite MURDERERS try to confuse this extremely simple matter with the powers of hypnosis, or suggestion through the dictate of "our" television and radio cult broadcasts that promote tyranny by fascist censorship.

The nature of hypnosis shouldn't be feared, but learned from to gain a better understanding of the true human condition. Something a bushite hates like our public education systems, is where we through improved communications, halt their criminal transgressions against our better selves.

In the warrant to take all my writings, and computer stuffs, (to begin on their fishing expedition to protect the war monger demon anti-Christ,) it was argued, that the information contained within their possession should remain TOP SECRET. The document has now been made available for my defense, and here is the reason it was argued THREE YEARS AGO, to not have the charges publicly heard.

/ / FROM TIME TO TIME, the NSIS section receives threats from members of the public who after investigation, turn out to be suffering from mental illness. On occasion, proceedings under the Mental Health Act as opposed to the Criminal Code may be more appropriate. In cases of a mental illness, the publicity and sensationalism of an incident such as this one may turn out to be negative to mentally ill persons. \ \

Yeah but, what about DEFENDING the FBI's findings "copper"? Is it that anyone who stands up for Justice in America, who asks loudly for a public platform in OUR media market place, should only be considered, top secretly, mentally ill to think they have a right to contribute on an equal basis, among the oh so lauded, intellectual power breaking crime pushers of our World? (The woman hating child killers, like naive bushite nazi demon liar Mattis wear badges too don't you know?) Are we crazies to want to defend our rights to be free of murderous tyranny? Are they secretly saying on behalf of the bushite: to speak out in praise of the good investigative work the FBI sometimes does, is a bad thing for their future top secret "investigations" on

Our behalf? Or is it because, if we believe in doing what needs to be done to protect Humanity from tyranny, would truly mean, evil bushite wouldn't be able to rob further from dying sacrificed as the undefended America?, and soon, wisdom by communication through science and reason would rule our better stays? Would it surely drive me insane to have our public acknowledge our good deeds that work to have freedom really reign indivisibly through Justice supreme? Anyway, Jeeze, I'm already crazy.

The national security branches of all our governments need a major overhaul in protocols. (officers who are involved in uncovering a criminal conspiracy, a conspiracy involving the murder of thousands of now dead Americans, should receive the full support of every police unit this world over as a protective measure for fellow officers. After all, George W. Bush is an American cop killer too.)

Before my site "Wizard's World Wide Works of Wonder" was taken down, I had the center piece (still available in other places) "Stand Together or Don't" as a full page spread with graphics and everything. "Stand Together..." is an essay that only asks that our standing criminal code in Canada be enforced, when it comes to the documented thieving of our communities as committed with the notoriously miss reported workings of the "cheating at play" VLT machine. I also had "Johnny's Last Stand" take a prominent position at the web page, along with "The Alien's Take". So get this: another argument made for the warrant to confiscate my personal belongings and leave the FBI out to die, was attributed to only a single Cnst., who blanketed my entire site in reference as "anti-government". That statement was the only statement made by the officer in regards to her summation of my writing skills, and was made in argument to a Judge to obtain the Warrant, just before the site fell, so I'm now, suspecting, was likely responsible for complaining it should be shut down by maybe.. badge waving?) Strangely (unknown to me until just recently) as it would happen, this same individual I had contacted over the course of several months regarding the VLTs, (on how the DOCUMENTED crime is perpetrated, and on our communities TRUE monetary losses (maths)) was the same who, top secretly claimed, my writing on Justice was "anti-government." See, I offered to come down to the station and assist with the maths if need be, (remember we're talking the thieving of literally billions and billions of dollars each year from mostly the poorest segments of our societies) to offer assistance in any way I could. (Or, to be told "fool, your mistaken".) But each and every time, I was denied access to have implemented, the protections of the criminal code here in Canada, (that usually makes our country greater than all others,) without a given reason why. [An aside: bushite irrationally hate science and reason because

we're intelligent, while I, can't help but respect life by learning something from just about anyone.]

Here is what it further said in the warrant, that up until now was considered top secret. (without the warrant staying secret, the darkness can't stand the light of scrutiny, and I would be freed from the restraints of a bogus warrant to go on shouting for TRUE Justice by DEMANDING the arrest, trial, and subsequent execution of those responsible for the crimes of nine/eleven - bush, rumsfeld, Ahmad, and condoleezza rice. With cheney and myers running a close second.)

ORDER

-snpd-

AND UPON being satisfied that the ends of justice would most probably be subverted by access to and disclosure of information filed in the Information to Obtain the Search Warrant filed in support of the application to prohibit access and disclosure;

[Good guy police officers might get the public recognition they deserve in other words right?]

the Search Warrant;

AND UPON being satisfied that access to and disclosure to information filed in support of the Search Warrant referred to above might be used for an improper purpose;

[getting back stolen VLT revenues you mean?]

AND UPON being satisfied that it would be in the best interests of the administration of justice that access to and disclosure of information filed in support of the application for the Search Warrant referred to above should be prohibited to the public;

[What?, don't want US public to know bush, rumsfeld, and condi committed nine/eleven with General Ahmad? Well, now I can see why all the hush hush.]

AND UPON being satisfied that access to and disclosure of information filed 'in support of the Search Warrant referred to above might well pose a substantial threat to the interests of effective law enforcement;

[following crimes scene leads at real murder scenes not good enough for our police agencies? - US people backing up ourselves with as something worth reckoning a better future with?]

AND UPON being satisfied that access to and disclosure of information filed in support of the Search Warrant referred to above would compromise the nature and extent of an ongoing investigation;

[Well, it's only been years now. Let US ask you, have YOU called the news desks of CBC or CNN, about bush's prior plan also? Are sandwich boards, posters, and placards, a police union willing to truly get behind as the untold Justice struggle for our suffering Humanity?]

AND UPON being satisfied that access to and disclosure of information filed in support of the Search Warrant referred to above could conceivably compromise the health interests of a person;

[What about the health concerns of the hundreds of thousands of innocent people bush has since ordered murdered, along with the millions of others who will suffer the consequences of radio-active contaminations for the next few eons? National news coverage is not what I fear, I fear that no one on this lonely planet cares to hear the cries of my Humanity for mercy, or holds love for God as worth fighting for.

-snpd-

So, what now? Please don't leave ourselves undefended from the criminal dictums of the demon anti-Christ, Our Mr. bush Jr. Demon bush is not America, America is America. Look, we arrest those responsible, and we carry on, by firstly reversing almost every thing G.W. the traitor implemented. Look, when Clinton implemented change, he was able to turn the country around pretty quick. Just bring back some progressive ideas. Dump the Patriot Act, and those that voted for it, and truly bring

back the Constitution with a respect granted to all Peoples regardless of nationality. Christian Palestinians are humans like US too don't you know? While fixing the neo-con war mess should start by making all co-habitants equal under the principles of fair judicial due process, meaning: freeing the innocent held captive, and arresting for war crimes among other things: bush and rumsfeld, myers and cheney, Allawi and Doud, Tommy Franks, Steven Russell, Saudi wahhabi Buford Blount, woman haters Sicko Sattler and mad dog Mattis, Batiste, Miller - along with all the rest of the rapists and torturers, and then, we.. seek out all the stolen assets taken in America's stolen name. Big job. But we can do it! God is on our side.

I was reading about "Jew Boy..." and I thought, perhaps some may misunderstand my position on Mr. Felton. When I said, "And in light of our desperate challenges today of defeating the enemies of Humanity as specific unjust individuals in "hiding", an ignorantly stupid thing to say." I was coming from a position that I felt, Greg's own superbly good and strong, intellectual arguments on the bigoted demonization of the innocent, would find himself! at fault with, by not looking for another's view regarding the label of "Zionist". Perhaps I was being too picky, but then, generally speaking, disputing the indefinable public's perception of the Holocaust is a loser's argument. Arguments, that generally, refuse to realize, soldiers like today's bushite, would as mindless droids, line innocent humans up next to a ditch, and shoot them all dead for no real reason in particular. [Nazis took film footage early on, then banned it, because it looked so completely insane.] Just like rumsfeld's blitzkrieg, or when enemy bushite thieves dropped thousands and thousands of land mine cluster duds in Iraqi school districts, threw grenades into Iraqi homes indiscriminately before entering with guns blaring, and true Americans, like Germans of yester year, still don't have it together as a freedom force worth reckoning with, to immediately destroy, the known of bushite with American law for criminally implementing the sadomasochistic torture of completely innocent people, and in some cases, tortured to death because maybe they finally then admitted, they were in cahoots with whomever as the "terrorist". Thereby, according to America's new Justice speaker, Gonzales, no longer was a human with rights to begin with anyway. A publicly expressed contempt for US innocent, done in by the disfunctioning sub-human bushite traitors sitting in our office. I'm sure some might understand who the greatly knowledgeable Greg Felton was referring to when stating "Zionists", but just think of the Arab "Semite". Ariel Sharon will steal the definition to victimize innocent Jews with for the American tax payer to foot the bill as, but when an Iraqi Semite, new to English newscasts tells you he's a bonafide Semite really, can he therefore be

completely wrong about his true identity? Or how about this: do you think, the persons never shown for public media interview as accepting to receive stolen property like completely furnished houses called those of "Jewish Settlements", contain anything but, bigots masked as religious observers? How else could they possibly live with themselves? Amongst US true believing Jews? What of Hillel do we fail to recognize in not condemning the brutalizing of the innocent in our own names left forsaken? A well entertained teen, growing up in dum-dum America, or here in Canada for that matter, will likely have little understanding of Palestinian Jews or "Zionism", (like we don't regarding regressive tax systems,) but for like a proud Catholic in Ireland, it's something stupid he's suppose to stand up and destroy himself about while in a drunken stupor turning orange regarding some ancient Roman history or earlier biblical teachings not ever comprehended entirely... But then, I thought, gee, I was the one being ignorantly stupid, because in that space where we were communicating during the recorded interview, we had just finished making the correlation of mutual racism/bigotry expressed between Hitler and Ariel Sharon. Sharon/Hitler steals/stole an innocent person's home, then throws/threw them into concentration camps to be victimized further because they're said to be inferior to the war funded as ungodly criminals, by the ignorant and stupider than ever American tax payers, again. [See "Trading with the Enemy"] And it was there where, Greg brought forward, that too, they are some of the very same Ideologs, of both scenes, who want always to divide the masses by intolerance, through racism or bigotry, to get ourselves to die at war with our/their ignorance, while the true 'hidden' instigators, (non-descript billionaire weapons dealing private bankers usually,) bask on some beach somewhere in our stolen luxuries, not having to lift a finger to command a full course dinner. That is why bushite are currently working to even further destroy America's public educational system which is already the very weakest of our developed world, and why it is preached on television in America non-stop, invest in deregulating the world market so you too, can rip someone off with slave labor conditions to compete your good for nothing son/father with. One out of three workers, officially, in America earn ten dollars or less an hour. And repuglicons hired near homeless people at 75 dollars a day in Ohio to walk around carrying we vote repuglicon signs during the mock election. An informed populace, is a group of people growing tired of being taken for victims, who might wise up and stand for real Justice through the Freedoms of understanding. Can you imagine US speaking internationally? I can. If only You'll help me gain a platform to debate the facistic censorship deniers. The Coast to Coast radio netwrok don't want no Americans talking about why Americans are being asked

to die for the bounty of, bad guy bushite war profiteering. The wealthy celebs don't have to risk their own lives, just the lives of other Americans denied a voice for representation. So, asking once or twice, and then fading away to give up ain't gonna do it. Coast to Coast only allows an intelectual one time a month to speak for maybe few seconds. That should change to weekly. And Americans should DEMAND America's serious political issues work to be addressed in an open forum like talk radio provides. I am open for challenging interviews. But again, bushite don't like free excange of ideas within our communities, for it puts their Satanic cult leader in a disfavorable light, who then wouldn't so easily, get away with committing mass murder in America, or allowing America's greatest pension thieves, to escape un-accounted.

So, I've been working on questions..

Do you not as an officer of our laws, require evidence to substantiate allegations of criminal impropriety against members of our community?

Would not allegations of murder substantiated without evidence, be false? And would not therefore, the slaughter of innocents, blamed for terrorism without a shred of evidence being known universally, be acts of mass murder committed against US interests? Or for the true believers, terrorism inflicted against G-d? (And, is this not why defining "Terrorism" was forbidden in the recent "Terrorism" conference in Saudi Arabia?)

To persecute an individual nation without a reason substantiated by evidence, would be then the persecution of our forsaken God as the innocent of US individually? Like Christ on a cross somewhere you'd be then right?

Come on, please, help yourself out man. This is Your world too you know,

King Johnny Wizard

"I share the belief of many of my contemporaries that the spiritual crisis pervading all spheres of Western industrial society can be remedied only by a change in our world view. We shall have to shift from the materialistic, dualistic belief that people and their environment are separate, toward a new conciousness of an all-encompassing reality, which embraces the experiencing ego, a reality in which people feel their oneness with animate nature and all of creation."

-Dr. Albert Hoffman

Some old Wizard rants -

Here Comes Johnny

Demon bush spewed, he as the antiChrist, is the most powerful force on the face of this earth, because, the cowardly dumfuked marines will obey every criminal command to not go after the those who feed them toxic waste to blow themselves up by cluster dud, or die in a needless war. As evil bushite in their minds, they feel this ability to victimize our God as the established innocent, empowers themselves as war criminals fighting against all people. As our enemy, they bomb our residential districts to victimize all poor people of a whole nation at a momentary disadvantage, to hopefully get killed more, too weak to stand for their own families back home soldiers. Leaderless bushite soldiers who are getting bushwhacked again by the unaccounted billions and billions stolen from their very own grand parents they leave forsaken. Demon steven russell or buford blount, (both self confessed freedom hating war criminals), get killed American soldiers because a real man in American uniform so rarely exists in true to life form, for if there were, bush and rumsfeld would be dead for nearly escaping their rightful arrest for the murder of thousands of American countrymen. But see? Too cowardly the bushite soldier is, instead they lie to your family, while bombing the defenseless, to openly, openly mind you, steal Iraqi resources from a rich spirited but already dirt poor people for bush as the enemies of Humanity. Demon bush, the bushite's evil deity whom they continue to give their dying purpose IN LIES to as the unholy and unAmerican, costs them dearly. Ask yourself carefully, who wouldn't kill any bushite who was threatening to murder innocent people to pay further homage to bush as everyone in America as enemy? true enemies of freedom by justice? When the bushites target innocent people, they lay claim to be interested in getting killed more American slave whores, right? Right? While bush, as their false idol, sits smiling him demon grin over all the wealth he and his partners now own personally as stolen. I'd as Lord, kill any unarrested bushite whom would target a community of children with cluster bombs. Without a second thought. Who wouldn't I ask you real hard as Creation to think about God and Man? What real man or women wouldn't? These bushites are parasites, inhuman savages who should be taken out by the proud and few, true American soldier's of justice and virtue from the real marine handbook. Evil bushite I will never fear before destroying, for we'll hunt them all down ourselves and destroy them personally as I will single

handedly if I have to even come back as the resurrected. A bushite is our enemy as traitors to the American way of living for our survival.

Don't like me? Tough luck.

Times are changing, there is an order to things, our universe has dimensions to it. There are many of us out there that scientifically understand this. We are at an understanding scientifically through measurement, that the nature of this living universe has a property to time that has no started ending before we've yet begun to realize our quantitative bites of measurement that we call history, are swimming with relative states of understanding. This can bring much for one to understand that there is no one right answers to everything but for willing for Justice, and that is of the God's truth, so to speak a word. So looking for somebody to explain things from the beginning as eternal life stands unbound and open, leads a position for a person such as myself to say, hey!, we're on our own here trying to do what is right for our being. As of Universal, there are things we can agree upon as anything consciously self aware. So, being that there are ideas of real world relativity that can be agreed to be so by any individual, it doesn't therefor ultimately matter, what you think of me personally when in support of freedom for all persons as God would will. (Jihad.) Thus is the separation of labeled identity from this higher plane of existence, that is as true as anything is. (Alive as God is, is to any bushite the fear they have of the real You of this universe unbound as an equal to all faiths, and rightly so, for if when we rise together, a blind and evil bushite will be the target of every person breathing.) Being thus, there is no reason to falsely find fault with what I am writing personally, but to understand yourself as judged through universal agreement by rational structure to the nature of chaos and order, thinking. .... So, Example: you know, nobody wants to be murdered. No one want to be deprived there liberty by not working directly to devive those same right from "others". If we're not committing criminal acts, and we're trying to make our way in this world the best we can with what we got, why would a bushite target US as innocent victim? Those of US trying to make an honest day's work seem enjoyable, while trying to have some happiness somewhere along the line, don't deserve to be sacrificed for the demon bush, so he can rob further more from our humanity left undefended. It is when the bushite designates a chunk of humanity under the evil bushite vision of "them" as

not our equals, not our brothers, is where we all as God agree that the George W. Bush cabal of war criminals are our sworn enemies. Contemptible people who blindly follow bush don't have any understanding as reason for their baseless opinion on victimizing our God, because we know they hide from open debate of their personal proven falsehoods, and misgivings on the power of my words. It's a misplaced faith in war criminal bush as their ungodly antiChrist will escape them the wrath of ourselves as the Humans without consequences is an atheists dilemma. Bushites don't have the frame work of understanding to know why they believe in the things that they do, while victimized all our Humanity believing we in fear, won't target bushite for Johnny's favor. Think again. I'd kill bushite to defend my innocent family, wouldn't You in all honesty? Of course you would. Any real man or woman would, anything less, would be uncivilized. Destroy the war criminating George W. Bush and his partners in crime my friend, and be loved by all as savior. Or don't. You decide your fate.

Johnny Wizard

--

Big Sky

We, as glorious human beings, are wondrously effected by the nature's of perception, but as so 99.9 percent wondrous, we come with some recognizable universal draw backs. One: actual evidence as measurable, must be a requirement to convince us of something to deprive another of rights over by judicial action. True judicial action through democratic means. (The simplicity of "a freeman shall not be imprisoned" is being profoundly missed by the bushmob's America as played too dumb to comprehend through our media news channels censored.) Demon bush demands you faithfully blank your mind from his bad faithed dictate on how unspeakable 9/11 magically went down, but without most the established crime scene evidence that is freely uploadable. It's not, gee, I wonder when he'll really screw up, it is bush himself whom is committing the crime of 9/11 with rummy to begin with, then thinking, he could get away with it still by lying to EVERYONE. For all time. War crimes have no statute of limitations in my book, and the law has a mighty long reach my friend.

Bushite bremer hired Saddam's secret police, and fired school teachers. Mr. bremer, you'll remember, is the

president of Kissinger Associates, the group that criminally provided Saddam the WMD knowhow. That's is evil for ya. His strategic defense, is that American soldiers, are too weak as slaves, and create doubt on what is firmly established in evidentiary proceedings already. Mr. bremer figures, since no person would willingly put themselves where he is, as certainly, it just can't be so.. (I'm sure he and rummy get alot of chuckles from conning US all as God to murder ourselves like that.) Doubt is an ever present property of a constantly changing, nothing is absolute universe. Substantiated evidence is ALL we got to go on, and sometimes, that can even get foggy. Similarly, with bush and rumsfeld. Their kind of treason is so blasphemous, people can't recognize that any real human being would willingly try to actually do such a thing for the windfalls of big corporate profit, and as such, a many god person, (as often the good natured and kind hearted), desperately look for any doubt, than to face such a human fear of real demon behavior in our World of worlds of every character. I as Lord hope, that over time, soon, recognizing war crimes will become almost second nature to US, and the fear of Human development as all good, will change to wicked fun and prosperity for all concerned. Currently, the lawless bushites are left to furthering with the barter of Your dying existence, all done by Your inaction to simply help Yourself. Yeah, YOU left televised to be politically powerless over trying to raise some awareness on the true state of your being alive in this world.

Kimmitt "We certainly don't believe that this indicates the coalition is demonstrating weakness".

Who is this "we" the bushites keep referring to? Is bombing residential communities to murder US people indiscriminately with toxic cluster duds, (that kill aplenty dubya dubya's), not just one of the stupidest, most heinous, worthless war crimes ever that could be committed in anyone's name? Seriously. It purposefully gets killed American Patriots, and for what but a blind worship of bush as their ticking

-
--

-- - - :. . "Intel".

--
-
.

Where is Kimmitt to speak about feeding plutonium to the loyal troops? Something he doesn't wish them to learn of? Is that not weakness as a military leader refusing like a coward, to stand on defense of your own dying blood brothers? He instead wishes to decieve himself, than to fight bravely believing in Freedom and Justice for US all. Maybe he'll change his view, by accidentally arresting bremer for the WMDs sold to Saddam illegally by following the evidence trail himself. Then maybe helping me out to get those responsible for 9/11 in the bush administration. What do you say Kimmitt?, are you with yourself as true American Patriot, yea or nay?

http://www.khilafah.com/home/category.php?DocumentID=9176&TagID=2

" "When there is a security failure, the party responsible for security is to be blamed. And let us ask ourselves, who has the capability of launching such bombs in these circumstances? What story should we believe, should we believe and blame the figure that the Americans are drawing for us (Abu Musaab al-Zarqawi and al-Qaida fighters), or should we believe what we are seeing on the ground everyday?" he said. "

Well yah. It makes no sense for why bush's Laden, or the real Laden even, would be working directly for the bushmob to steal further more from Iraqi wealth, and the soldiering American tax payer, while not suggesting a kill shot to russell, blount, bremer, rumsfeld or bush. Or, speaking on the despicable war crimes, or where all the stolen loot is going to. (IT'S SEVENTEEN PAGES!!!) Then, guess who decided all of Iraq should get this criminal, let's do the bushmob another great idea? Bremer, or the CPA. (Reminds me of rummy's "pentagon" plan P2OG, a terrorist plan figured by rummy; that since, he don't want found out responsible for treason, he'll orchestrate it himself to 'appear' [like as if by magic] as the Pentagon, or America, and that's only if, we were to be asking him directly about something he criminally planned personally. (but shhhh.. it's a written secret between just him and US apparently) Strange days of terrible tragedy, I know.. But fun!))

These crimes Kimmitt seems dead set on not investigating, ring more from his weak leadership, than from anything else. The bushite war crimes are as iligitimately premissed, and as so evil is always dumb and weak like Kimmitt is spotlighted as traitor to every American soldier out there truly dying needlessly as bushwhores so to rob from Iraqi and American. Kimmitt only lacks himself some manly courage to try saving US all by communicating for America's America. Will he, or.

Illiterate, irrational, all around dumb dubya had stated long before, that he knows that the, no plan to die for but getting bushite rich quicker scheme letter writing guy, is for sure, senior al-Qaeda, and I guess, he would know better than everyone else about the writer doing himself as the deceived pure evil nazi war criminating antiChrist so many favors? The bush liar as America's enemy kills ourselves as the innocent and undefended, needlessly but for stealing our human values, and so... accused Laden is a terrorist for what loyal causes again?

Being bushite victim just sucks for God as everyone.

I want to come down and party with you People, but the bushmob keeps trying to ruin our days, by destroying American lives not being spoken for. I don't like the bushite attitude about criminally ruling our ways, and I'm here to freely, demand Justice for Freedom as the Heaven's awakening. The problem is NRA members aren't acting to protect Justice left unrepresented by corporate mind control., Like Freedom of the living breathing good American Police investigating forces being denied as relevant news material witnesses. Demon bush's war mongering against God hasn't only recklessly murdered near two hundred thousand mostly defenseless, unarmed people, but has dumped with rummy, thousands of TONS of radio-active toxic waste to murder God for what will be greater than 50 generations of innocent human beings. Murdered in your name, my name, America's name, God's name. What beef does a bushite corporate america have with the Children of God? I beg the NRA, the CIA, the FBI, good guy bikers, and any other real Patriots to stand up as men for the Family, and kill the unarrested enemy bushmob for 9/11 as traitors to our dying America, and for the war crimes they have committed in our names. War crimes while sacrificing to actually DIE, the dumfuk nazi teen soldiers whom have no leadership present to speak of. As I've stated previously, we will ask all American soldiers to either stand for America and the Constitution, as freedom and Justice for all, demanding evidence to convince US whom is suspected for criminal offences, or with the bushites, as enemies of themselves to self arillate.

Evil is just the deceived disguised. (Wow I AM Amazing)

I guess this is all quite a consideration to take and role through with for a couple thousand years, but look, evil incarnate antiChrist bush is back again fuking US around, harming our World as Humanity with flagrant war crimes continuing. His illegitimate power base comes

from Americans thinking that because he is the President, he shouldn't be accountable to American Law like the rest of US, and that is where a bushite takes the fall while trying to bring down all of Americans through corporate censorship on his treason. Like unarrested fascist steven "he'll kill a bunch of US folk if you complain publicly about bush banking policy or bush health care premiums" russell, or unarrested bush bitch buford blount, who confesses the joy to see American soldiers die rightly for his irrational crimes against innocent civilians trying to defend ourselves. Fuk, who wouldn't destroy unarrested buford blount I ask all creatures great and small. Wouldn't you? I mean, come on, HONESTLY, THINK ABOUT IT, what real man, if he had to, wouldn't, to protect their innocent family? Steven russell and buford blount as steroided pill poppers have targeted innocent whomevers for being just alive, because they trust, in faith, that all America will think it makes the demon bush 'cabal' so scary and strong in a godless world that gets killed, not all so blind cowardly Patriots seen led leaderlessly as unAmerican like that forever. One or two Soldier's of Fortune in the American marines, willing to join up with US as true freedom fighters for America, is all I'm pushing for here as King of kings.

(Hey.. I know... I naturally spook myself, but I so enjoy living for something, and, there does seems to be room to believe here for you as anyone to freely be also. If Americans only knew how fantastic you could be as this living universe questing justice for freedom, You'd as anyone, think twice about silently letting the bushmob take you as anyone else further to suffer unheard from. I urge soldiers to unite on our determination to take the bush administration out of our life and death business decisions, and straight behind bars, awaiting their open public trials for treason.)

The bushites who faithfully advocate the murder of innocent people blindly are our enemies, and I ask all able bodied men, to do what is right, and get the bushmob of terrorists before they take another American soldier as too weak to realize what is protected in the American constitution.

--

Forever Hold Your Peace

"I feel depressed," she said after leaving the theatre. "He (Gibson) went overboard with the cruelty and violence, and I think Mel Gibson is a bit of a sadist."

It's not the great artist Gibson, but corporate american cult news who sit back bushiting "It's harmless, now shut up dummy", knowing sadistic "sexy" rummy dumped thousands of tons of radio-active toxic waste, along with land mines to commit senseless, gratuitous mass murder in residential communities housing the God of Revelations.

It is bushite america who call themselves Christian, who fund the Likud with American sweat and labor, to criminally assault innocent Christians as accused of nothing but being Christian. They do this as enemies of Justice and God, to tell US as unbelievers, to quickening the coming of the Lord, who will in turn, condemn the individuals responsible, straight to hell where they rightly belong. (Or prison whichever comes first)

It is America who sit bushiting "Freedom", while wording nothing to blindly enslaving whomever, to torture or murder for whatever by bombing Nations of People irrationally. No reason., For law. (But to maybe secretly sell drugs, or steal assets to victimize Humanity. a.k.a. Jesus forsaken, or WMD bemer's Iraq)

And it is toxic cult corporate america, who let traitors, bush and rummy murder thousands in New York City, ("The People") and then escape forever, operation infinite justice. I don't think so. I as John would destroy every nazi american bushite happily, to save the life of one child in any third world country.

snpd

Killing people
for no good reasons really sucks. I hate bushites.

Let's get the Patriots together and bag US some Rumsfeld

I just so much hate that demon antiChrist bush, and his cabal of war mongers, it hurts. Let's just kill George W. Bush for being qualified to lead but only himself and Rumsfeld directly up to our NRA's firing squad, for almost foolishly thinking they would actually escape the planned murder of US thousands in New York City on 9/11, then continuing by sacrificing dumdum nazi soldiers on a cross in a completely unnecessary war against civilization. What is it that the evil bushites can do now in Iraq, before murdering untold thousands and thousands, but for stealing even more of God's good will towards all Mankind as loved?

[S I L E N C E]

No words from the bushites who rule our communications through corporate news censorship, while Christian parents call out unheard: why has corporate america allowed forsaken soldiers to eat plutonium to murder God for a measly few dollars the bushmob will pocket for the up coming "unbiased" re-election news campaign? As I suggested before, (If there are no real men in the marines) why not just give the unarrested bushmob all the money they want, so we can forgo all the needless death and suffering against our friends and family?

[Look, usenet's us.military.army can be the place anyone in the world can offer any irrational thought on why bush shouldn't be immediately arrested or executed as traitor, but guess what? bushite nazi brethren, either mostly don't exist in our real world, or can't think to save themselves as bushwhore nazi dumdums. Dumdums who advocate the senseless murder of innocent People, and the continuing destruction of America's America.]

--

Free Wheeling

" Why is it so far-fetched to imagine God's unhappiness about denying civil rights to any man or woman? "

snpd

Demon bush knows now that Americans do not support him by democratic poll, yet, he is taking a position of currupting the American Constitution, that he in almost every other way, has left ignored as irrelevant.

snpd

Demon bush is fcuekd up. I guess it comes with being the antiChrist, and killing all them American coppers, has got his purpose all wacky, and out of order with the rest of our world liberating.

You can protect a person's right to be, but not pass laws to deny free loving of the godly humans. But guess what?, bush'll do it anyway by saying, he dunt read papers with words on rights of dem People, cause we're all together too opinionated when it comes to him mass murdering thousands, like in New York City.

--

The Jews had it right

Demon bush recently commenting on his vast superior knowledge of matrimony, spewed forth "millennia of human experience,"

Imagine a corporately successful American divorce lawyer, taking what he can get away with, and the marriage experience for America we'll be like that sometimes.

Just where is the "human experience"? I don't yet know all the answers, but, why is it that the happy couple can't just have a religious ceremony sanctifying their marriage, and be done with the rest of the, I might screw you over in the legal ease later part of it? If done so, I'm sure marriages would more easily stand the test of time. The strength of marriage is recognized for what it symbolizes in love ever lasting union. (as God is, or as with Nature, or just as all the dedicated one on one playtime)

The divorce lawyers take half your life's assets through pressing subtly for, doing so as he/she plans, to be sweetly bittered out of settlement as far as the lingo can commiserate the arbitrator of commissary charges on every forthwith therefore, stuffed for your(s), petty pity parties into their glorious big fat wallet.

Marriages don't truly hold together through love by expensive paper work done by hearty bureaucrats, but by a personal life commitment to love, cherishing one.. blah blah blah... Now, how could anyone, anywhere, as "The State" say to two people who express a mutual caring love, (as anyone else could), are forbidden to express love through sharing freely with one another as something truly beautiful? A celebrated relationship that makes their time together something treasured? Time of the newer old world along with all the ancient newborn stars above orchestrating for their everyday ra-ra pom-pommed humdrum of roughing it through the bad times to revel in the good? Couples who have committed to life long sharing, live longer on the average, than anybody else does. It's a fact Jill.

(As for me, and my own little Universe that revolves around myself starving for attention as almost penniless performer, leaves me with my one liner, "no I'm actually playing the Son of Man as Creator for real to packed live auditoriums", really kinda, makes things difficult...but hey! Things could change. God is free Love man!, don't you guys remember the 60's? Look, I'll even show you how i do some of my best card tricks, if you get me on for an hour or two with Aaron Brown. He's on that CNN channel. The News channel. Or perhaps my secret nemesis, Art Bell, why don't you give him a call?)

snpd

God but, the Marriage thing is really a big something in America, as it does seem amiss, though I'm honestly not qualified to offer much more insights, until I can get off the, why is bush getting away with murdering US as the antiChrist first. (Maybe it is all my fault why no girl wants to give her love to me in between my swashbucklin'.. oh well then, I guess that's one of the mysteries I pose as the average chicken coop's "holy God cock")

Anyway, I think it's time we'd be getting the deviant George W. Bush annulled from our wills.

" MK Ahmed Tibi (Hadash) said he does not think Boim should resign because the deputy defense minister acts as valuable evidence for those who think the Israeli government embraces a group of fascists. "

As I've written, since i took up this challenge, areil sharon is the furthest thing from a Jew one could imagine. No really, that's the most disturbing quality of racism, and or bigotry practiced in our governments as Institutionalized. (A fault found that is genuinely unfair as those who practice it.) (of which so very none get truly wealthy from.) Resulting in an individual monster named ariel sharon: enemy of every Jew since the dawn. To, as a representative government, publicly, in the People's name, ACT deliberately unfair as criminals, denigrating some labeled group of innocent people for cheating and victimization, or murdering like hitler did, is as of, unfair to the God of Christian, Pagans, the Buddyhas, along with a great many others even including the, "no thanks", they have all the answers already to life's big question innocent Atheists, DOES NOT preclude including the "Jews" of the old new testament, that sharone (in contempt of all People as God, as in his own life left rejected 'unfairly') would have left unread. For the bonuses of american tax taking from an "other" less fortunates to not have anti-Semites (Semite=Arab) with nazi american mk-47s around ariel sharon always to protect himself from a true Kingly Jew. For, what else is in this life, but to make people suffer like Jesus did. Right ariel sharon? It's this, it's so simple, the corporations wont let US say so thing again. FRONTLINE did a show once, several years ago on the actual individual people that the Jew-haters funded by nazi america victimize, but repeated since?,.. rarely never in AMERICA. Why? Because anyone with any sense would immediately see, who was the bad guy, and who was the Jew. Not good for the repuglicons who take money on the, won't go away issue though, played unknowable on "unbiased" commercial

corporate american TV news broadcasts. They're stayed to f-o-r-c-e US neutral by, in a evil cult like bushite trace, find irrational excuses to except silently: concentration camps, torture, and first degree murders against innocent Christians or Jews, paid for committed in our names as illegitimate.

What ever happened to the 50 year Jewish Jubilee where all Jews give up on what is their now stolen land, to acknowledge God's Holy teaching from the Tora? Is the Jubilee just a myth? If you build a house, on the property you share, would it be wrong for ariel sharon to steal it, while america was left unaware? American tv doesn't even play what their being truly taxed to death for under the demon antiChrist, their Mr. bush Jr., so what can we expect in all honesty, right? (Demon bush murders good guy American police officers, and it's just far to embarrassing for corporate america to immediately arrest or execute the traitor.)

Mr. ariel sharon has been on the Jewish hit list, since a Jew met a Jew in the park and said, "that ungodly bastard sharon just murdered my Palestinian Jewish friend, who he called innocent of all things." Demon anti-Jew ariel sharon knows what his consequences are, for, that's all he is as the ungodly. Knows nothing of democracy, knows nothing of freedom or Jewish religious teachings, he just keeps killing Jews so they won't catch him, while he does things like, oh I don't know, desecrates the third holiest of holies. Again, ariel sharon is not Jewish. Deal with it. PRIME EXAMPLE: The evil Jew-hater, ariel sharon, was caught directly involved in the cover up, of the failed attempt for his partners in crime to blow up some could be Jewish People in the Mexican congress, then likely finger Laden as innocent of as terrorists. To incredible to believe? Believe it. Didn't see it splashed on CNN as important on where American tax dollars are being funneled as Christ killers though did you?

snpd the God is sometimes gay part

But simply put, the more Jews ariel sharon gets murdered, the more money from repuglicons comes by taking Christians for Christ helpless on the cross, but without any 'real' God. Then anti-Jew ariel sharon puts money back into the private pockets of 'wealthy' repuglicons for funding true terrorism on the sly. The Likuds steal people's homes, life savings, shoot to death innocent Christians, Atheists, whomever, while they then send off the surviving victims with only what

can be carried quickly, to suffer in some ghetto camp. Hitler, revisited. What "Jews" since whenever have suffered from, now without God in Government, made fearful to stand for their rights against bigot murderer ariel sharon's mk-47s., they then under tyranny, falsely, try to condemn all themselves as forsaken without G's leadership found in Mr. ariel sharon. The Jews had it right on me never actually personally getting up on a cross by God's inability to communicate through silence, it is more of a metaphor on the true state of humanity, but no more so graphically illustrated by today's Likude Israel that condemns all the People as God. One more example on many: Demon sharon, funded by nazi bushite america, will have Jewish Israeli teens arrested that disagree with murdering innocent people to steal their land as God from. It's a fact Jack. Mr. areil sharon is not Jewish. Live with it suffering without speaking, or shout to the high heavens that your fed up, and we're not going to take it any longer. The King has returned!

King of the Jews,

Johnny Wizard

W's Reality Gap
http://www.alternet.org/mobile/story_mobile.html?StoryID=17907

" Whenever President Bush is now confronted with an unacceptable reality, he either changes the subject - is steroid use really more important than the environment? - or expresses confidence in his certainty. "I'm absolutely confident that..." he'll say, as if the issue is his determination rather than his conclusion. "

It's his faith infinitive as the antiChrist, where he has hypnotized the dopey with merely the power of suggestion, that has brought him to US as foolishly not conceiving, or most importantly, truly understanding. So, do we feel sorry for his ignorance as fallibility we are all prone to own as the human rendition? No. But for stupidity thinking he could murder US as the innocent to steal our free values, and just get away with it by lying to no one continually, is where the Lord makes our stand for God unseen as miraculous.

The demon bush dictate is not exceptable for my just little man universe. I knows too much about freedom to go on dying in bush's forsaken place as innocent sacrifice. With corporate america's unarrested demon

bush forcing my hand, I would decide to defend by concluding, he is truly, the enemy of all America. America: weak without leadership, yes, but not as dumb as some would have us believe. When is it that we feel sorry for the thousands of lives bush's deliberate actions of mass murder have taken for no good reasons? Their ain't nobody to defend america's overlord, but through corporate censorship of the reality of who's really dying for the demon bush liar. I'm the one anyone would ever have a legitimate fear of getting on the wrong side of, and if your not in the process of attempting to get away with murdering some defenseless family for nothing but to rob from, to each, his or her own, mostly, right?

JW

U.S. pays millions to discredited Iraqis
http://www.twincities.com/mld/twincities/news/nation/8010694.htm

" The letter appeared to contradict denials made last year by top Pentagon officials that they were receiving intelligence on Iraq that bypassed established channels and vetting procedures. "

Bypassing America as undefended freedom,, sacrificed to die for slavery under the unconstitutional as blatant evil, bushite decrees. Demon bush tells America, and indeed the World, since 9/11, evidence will no longer be a requirement to convince US who is a mass murderer, and corporate news america sells on without the human opinion present evaluating his true asking price. Man, that demon bush is sure one true evil bastard when you think of what he, rummy, and Ashcroft is stealing in our names censored through nazi fascism. [Granted, I am literate.]

God or no God, I don't like that demon antiChrist, Our Mr. bush Jr. very much.

--

Democracy How?
http://www.prospect.org/print/V15/3/collier-r.html

" "The database is comprehensive, extremely detailed,"

By Annan not publicly addressing this very serious issue, will not be fooling me he hasn't heard it mentioned. The families of Iraq are accounted almost entirely by "comprehensive, extremely detailed"

measurements. So what the hell is going on about supporting our world community by not condemning war crimes?, Just where is Annan on the issue of an international commitment kept I want asked religiously across this world. Now.

Boy, if I were make believe King...

--

Falling for You

Brahimi said. "We need to organize elections as early as possible but not as early as impossible."

Help me understand: Why can not Iraq start on the process of

O R G A N I Z I N G E L E C T I O N S

NOW to work towards gaining accountability for soon as possible? After June? What the... Can't we people talk while walking? Look, the future is likely coming no matter what, and what ever illegitimate government is embarrassingly stalled by evil WMD proliferator baathist bremer to steal unaccounted American tax dollars from the "willing" victims dying, (like by bush bitch cluster dud) will still necessitate the need, to have started on the process of fair elections for our Iraq before hand. Corporate america might not care of sacrificing America to rob from, but real People are honorable, and won't reserve the scourge of nazi bushitizm a place to suffer any further if we can help it.

The bushites are sorrily, simply not qualified under the dire circumstances they've assaulted ourselves into for mugger war profitizing, as leading US to be dying undefended while failing miserably on my behalf to demand Justice as freedom is truly.

Now, it has been vaguely suggested that a, steven "you can't have public health care or he'll murder whomever for thinking" russell, or a buford "bush bitch" blount as treasonous evil nazi bushwhore, to undermine freedom and democracy everywheres in our world might cowardly attack defenseless innocent families at the polls while leaving "bin Laden" fingerprints, criminally warring to kill more American dumdums for commi Halliburton et al, continuing committing as unaccounted massive waste in America by over billing the dying People. Why would bushites do this? Evil is blind irrationality, disguised as thought out faithfully by fascists. The, nothing to fear suggestible absolute nature of

non-linerality, is 99.9 percent, super fractal wowy miraculous as crazy about the fringes, (or is that bridges?). But, without Justice ruling our stay, we leave for a Heaven waiting, on a sea of madness as enemies of life to all things eternally being. Translated: We need to arrest these specific war criminals at the end of our, ready to fire rifles. Done to stop them personally, from robbing or murdering America indiscriminately as enemies to everyone. But in addition to that, (like at the same time) who says the polls can't be stretched out over several days or a week, with multiple options on submitting votes registered through the oil-for-food program? I want to know where Annan is on this., why it can't be done., and what his position is on returning the Iraqi Humanitarian aid stolen by Halliburton, or Iraqi Central Bank deposits cashed by HAS TO BE, current pirates. Annan, be a man, an acknowledge our presence as relevantly important for our world's living sake.

We had 100 percent access throughout Iraq prior to allowing bush, rumsfeld, and franks to sacrifice literally thousands of innocent lives. Who are now DEAD or DYING NEEDLESSLY as first degree murder victims, in some bastardized Lord's name apparently.

snpd

Any improvements of the current situation in Iraq today, are going to be less that what would have costed to not kill innocent people for nothing but evil bushite war profitizing at it's level worst in this history ever of all Humanity recorded. The demon antiChrist of corporate america has got to go, and he's got to go immediately as arrested or shot dead by the Patriots for treason, before he causes US anymore needless losses and grief to our friends and family. Like for the next fifty or so generations what with the plutonium being fed blindly as willed to cowardly, weak, American teen enemy bushite soldiers presently. (If we could seperate the bushites from the rest of US, this might be a good thing, but they have no real leadership to speak about freely as the dying stupidly.(PRINT THIS PAPER AND MAIL IT EVERYWHERE))

DYING like those from 9/11 did, or dying slower, like with NYC air quality as best Oz has to offer. (Harmless corporate TV tells US without opinion.) Either or even in other ways, the demon bush is truly killing God's America in Your name not heard from. Help me you idiot. You! Yes you there, reading here. I am your secret

friend see?, and.. well.. the Universe needs your help desperately pal. Please? For me? ..Oh God help me your really dumb without you aren't I too? Listen: we need to talk.

We are here to save all of creation from needless death. Big deal. Your are of a real eternal nature, that exists also, (as understood scientifically) timeless. For real. (The big bang is now. (All mass is also of not as seperate energy, then there's our gravity...)) Our possibilities for a great, better future are staggering, if we are capable collectively as individuals to defeat the "kindness" of George W. bush, the dying embodiment of evil as the very true demon antiChrist of all biblical references ever mentioned. His lying isn't just deceitful, it is downright hellish.

You know what I think? The evil enemies of Humanity, don't want US People to be recognized from being victims under tyranny through corporate cult censorship. Without Justice ruling our ways under the irrational criminal bushmob dictate, we lose as losers cheating ourselves as not worth the consideration to be free individuals.

Granted, I am an actual god familiar with the rights present within the Constitution of America. THEE God's god, here to teach the world about needless sacrifice, caused primarily, for the effects of inflated egg shell egos. As Creator, I goofed somewhere in the, order to chaos mixer. I didn't plan (it was a mistake) for Americans to be so cowardly and weak when it comes to defending their very own selves from needless death and sorrow through blatant, naked, how can you miss it, evil criminal enterprises. So, perhaps, now if I stop writing, and fake I flied off vamoosed into the unknowable, a couple people on the planet might go 'hmpht', and decide to carry on bravely, the real, honest to death struggle for freedom living without me as sorrily missed. (I as John am not anything special paradoxically.) This is fear itself, ain't nobody nowhere as terrifyingly terrifiable as this is just truly super terrific being only my simple written taughts, yet, ... I'm like.. just fiction writer, big dreamer Johnny Wizard, looking for some happiness, human respect, and a good last supper before I check out from this made by the earthling "space explorers" dungeon cell.

But who cares about me, or my great, he thinks he's so brilliant ideas? Everything's seriously a pain to him

sometimes, and he talks to himself like he's the, been here and gone as eons now, King of the Universe for the holy Word from the Heavens above or something. What a poor dying fool to chance that anyone would willingly help themselves by caring for someone. ..You know, I'm beginning to not be all that crazy about the demon bush liar continuing to war humanity in my own true name also now that I think of life in this way honestly. H-e..Y -! (Morningstar has been accused of a lot of things, but you'll notice, always plays fair as your rules.))

What freedom in Iraq will come that allows a, buford blount to walk unaccosted by 'legal' services? Or where rummy's cluster dud advocates gain silent gratitude? A nation high-jacked by bremer's buddies who illegally sold Saddam WMD, then the product wisely gets destroyed as functionally useless being primarily indiscriminate warfare, then bremer's buddies come in again and murder untold thousands upon thousands, all because your magic TV is letting them get away with it as considered too embarrassing to the billionaire private stake holders. Fuk you corporate american Human haters for not reporting the bushites as war crime supporters.

Where in the real world are the nazi bushites gonna demand we go to allow 'them' to continue warring the Constitution while wearing a bushite soldier's uniform in their dying universes of Universe? Leaderless corporate america?, injured and dying as the unjustly starving? What can the bushites do now in Iraq, that they couldn't do before the needless murder of untold thousands upon thousands of innocent people with loving families? Before dumping thousands of tons of radio-active toxic waste as enemies of God's children? Only to rob, maim, and destroy God's great work through Love. We had complete unrestricted access throughout Iraq, and Saddam was offering the national media for bush to pontificate, while not refusing dialog for any suggestions.

I ask:

Can not America invite me formally for brunch, by somehow bypassing the war mongering nazi tyrant held up in the Oval office? I'd invite you all, but my place is still a mess, and I'm stuck eating for survival just now. I don't qualify for help, because surely, a person with your talents, should have someone willing to stave you off the, who cares about saving the world for you buddy, laughing in all seriousness shtick. (cool eh?)

I give you my world:

To save humanity from tyranny will be accomplished
through the value of these free ideals recognized.

Isn't life grand sometimes when the bushites aren't
needlessly murdering our innocent families in your name?

I again,
will now leave
you without me,

forever loved,

Johnny Wizard - Your "other" parent or guardian advising
you to immediately, by Citizen Right, arrest the
President's 'cabal' in the name of the Lord, who already
died for this once already god damn it, and I'm not
sacrificing any longer unknown as forgotten in the
absence of any true reason to our existence, I want to
celebrate. I want to afford a cold brew to nuzzle on a
warm sunny afternoon, at a hideaway somewhere, lost
in my comforts of having few real worries, but for
unintentionally offending someone for not having the
time to except their generous support, or gratitude.

--

http://usinfo.state.gov/topical/pol/usandun/04021901.htm

" "We need to find a mechanism to create a caretaker
government and then help prepare the elections later
- sometime later in the future," he added. Mr Annan
said that there was "wide agreement" "

Unelected care taking government? What is the group
their now supposedly doing? Where in the process is
corporate america to simply fix the Russian generators
they've been paid over and over again already for as
doing nothing in The People's interests?, As unaccounted
to? Where is corporate america to fly in the emergency
food and provisions for the innocent as victimized?
Who's care will this continuing robbery of America
through war crimes further fail to serve? How can Annan
gain "wide agreement", with no poll on the issue? Who
personally did he talk to, agreeing to leave Iraq
without working for an elected government of the
People?, and who consented to give up on such dire
needs? Where is Annan on the thousands of tons of
radio-active toxic waste dumped by rotten rummy? Is it
not an issue he should personally be addressing for
Humanity, to demand an immediate clean up paid for by
those responsible? Imagine that: Truly toxic as dying,
American Patriot soldiers making it up to God's great
Creation, by hunting down the actual bad guys, who done
did crossed the wrong family this time.

Wow, now that would be a war worth televising!

--

New Moon

To steal public utility services paid already as owned completely by IRAQI, (America dying for the bushite American pension thieves at WorldCom or Britain's "Dutch"-Shell,) ain't gonna change the business locations. The evil unAmerican cop killing bushites think they're gonna party in Manhattan on our dime in apartments for around $15,000 a month, while sneering at a homeless beggar on the streets, who thought he was still in Vietnam.

An oil-for-Iraq program needs to be reestablished, but transparent to all as addressing the immediate emergency needs of Iraqis. Private, in the secret back room with the bushmob nazi bankers, and their private inept collaborators flustering as international fraudulent behaviors, just wont do., try as bush might to murder perhaps millions of Americans uncovered by his criminally enforced, reduction in health care coverage extravaganzas.

THE ROVING EYE IRAQ AND AL-QAEDA
Part 1 - The usual suspects
http://www.axisoflogic.com/artman/publish/article_5146.shtml

" This latest US intelligence, though, makes little sense. For starters, al-Qaeda pigeons are highly unlikely to move around with computer discs in their briefcases: since early 2002 a disabled al-Qaeda has used women couriers to deliver strictly verbal messages. "

Kimmitt in collusion with the bushmob perhaps? To cover up an investigation set up to encourage the blind murder of America as bushite by attempting to divide all the People of Iraq as Iraqi?, na... not in a tribal based, enduring practically timeless, inter-woven culture.

Those who ran public healthcare and university are all the bad guys for thinking, the blind bushite bigots would conclude illegitimately., and I would say to yourself: no, the People with equal rights to stay united for good times, are a people sworn to uphold law that serves our freedom's best. Iraqi assets are not bush and bremer's right to steal without question, nor either, American generosity swindled by WorldCom, Enron, Dutch-Shell or Halliburton is the final, be all answer to everything.

You as sure would know that unjustly victimizing the World in our name because "they" didn't believe in blindly worshiping with servitude, the war mongering mass murderer demon bush liar, is freedom stolen from any. Wide, across the board, ask anyone for comment on where the bombs dropped from. Needlessly in bush's name, but to war God's love, and my good life.

Demon bush is not America, America is America.

This is all I'm ever doing as King, but perhaps also, not going left hungry. If you can help me help you, we'll be set for something better.

Truth can pose serious problems, when we idolize blindly the evil demon antiChrist for criminal sacrifice, instead of arresting him for 9/11 along with cheney, and bummer rummy, the silent but radio-active cluster dud dropper who murders American Patriots for a nickel.

Too awe shock embarrassing is it to ameliorate for the sake of a dying American Patriot Kimmitt?

For, why would Laden want the bushites to stay to further rob America through creating instability within his own ranks? without denouncing the demon bush war lies, that are paying a very real price.. ? What would it cost commi Halliburton, to face public accountability (Democracy) in Iraq on where Iraqi money is being misappropriated for? Do you think they'll get to keep the oil business, to sell back to all of Iraq at uncontested mark up freely? To steal food aid to under pay the third world? Starving?

To steal public utility services paid already as owned completely by IRAQI, (America dying for the bushite American pension thieves at WorldCom or Britain's "Dutch"-Shell,) ain't gonna change the public business locations. The evil bushites think they're gonna party in Manhattan on our dime in apartments for around $15,000 a month, while sneering at a homeless beggar on the streets, who thought he was still in Vietnam.

Perhaps, he is.

Another American soldier owes me a beer, or will be dying to steal life from themselves as sacrificed for the evil criminal dictate of Their Mr. bush Jr.. Don't go silent as the unknown dying enemy to God and humanity, stand with Justice and freedom in America for Americans, and I swear, we won't kill ya as the good guys in the epilogue.

By the bushmob attempting to create unrest, so Halliburton at al, can continue in the tommy franks chaos to rob America blind with false billing, instead of cash paying, is costing the lives of American teen soldiers. Who god love'em or hate'em, don't have the intellect to strategize their way out of an open paper bag, never mind evil bush's false creeds without real leadership present as living for. Instead of bruising our egos, the bushites are dropping bombs illegally on the family.

Man.

Ask a dying soldier how it sits to know commi Halliburton pocketed Humanitarian Aid? Go ahead, ask'em?! Then ask'em why they die as cowards by rummy cluster dud for the bushmob to rob their own direct families left unprotected? Ask'em! You know what they'll tell you? They're not happy about these bushmob war crimes truly destroying America in America, "freedom", "democracy", Johnny Wizard or otherwise., Or instead they'll mumble something incoherently while jaunting away to murder some one found defenseless, or innocent to pay further while dying to slave under the criminal dictate of the really evil demon bush Jr..

A proud bushite is a toxic bushite halting from warring the innocent by stealing your human values truly.

We need to see an apology to come from America, an apology to Humanity for this carnage waged unnecessary, but for these contemptible war profiteering practices as direct assaults to all as God is. Assaults that we have been unable to remedy by openly communicating to bush's secret White House, rumsfeld's secret Pentagon, or Ashcroft's secret Justice Department.

Just who's running this show anyway, I wanna know.

A - g - a - i - n

Will Americans save themselves with help from the rest of US, by arresting bush and rumsfeld immediately for high treason?, or will they cower and DIE as the innocent, in false gratitude to the lying traitors bushmob? To with their dying breath proclaim unattested, to be ridding the Universe of their continuing criminal behavior.. a.k.a. evil?

Evidence is a must to establish a crime scene provocateur, to deny such privilege is to deny freedom be served as consented through any government.

Hint: Demon bush, rumsfeld and Ashcroft, they ain't no struggling democracy entirely.

Look, the thing about God coming down, and having it out with humanity on some various critical issues, isn't like going to happen, it is doing.

We had complete unrestricted access throughout Iraq prior to murdering any innocent child in america's name.

These verbs will strike that antiChrist demon down for ever and a day, and if I've gone, faded away, these words will still remain,

till now we meet again,

as you were,

Johnny Wizard

--

http://radio.indymedia.org/uploads/benderman.mp3

The Benderman Cause

I felt compelled to support the Benderman's cause in any way I could, so I am providing America some arguments that I would use in a court of law to defend your freedoms. If America would so desire, I would also be prepared to make a recorded statement from here in Canada. (I have been denied access into the U.S..) My positions of rational argument are naturally based upon our established facts, and as such, are something few Americans are afforded the luxury of through corporate channels. I hope my forcefulness on these issues does not fear you to doubt I have the best of intentions when it comes to serving the interests indivisibly inherent within the American Constitution. God, I believe is just, and as such, the ungodly war actions of George W. Bush dictate are criminal in the worst degree, being a harbinger of suffering and misery against all of Humanity as US being the innocent. The innocent in our entirety, is my "God" that I love with all I can will. I am compelled as a living human being to defend America to the last bush supporter praised if need be. I fight the enemy of God and Humanity with reason, understanding, Akeido, and a conviction that our justice system must prevail for me to be truly myself really.

"He explained to "60 Minutes," "I was told in basic training that, if I'm given an illegal or immoral order,

it is my duty to disobey it. And I feel that invading and occupying Iraq is an illegal and immoral thing to do."

The war was declared "illegal" by the U.N..
Why? Because Saddam wasn't found in breach
of the internationally agreed upon resolution 1441,
(Saddam did EVERYTHING POSSIBLE that was
asked of Iraq by the bush administration, and then
some Mr. Bush refused to even take him up on.
Like national Iraqi television broadcasts.) despite
the lies quoted by corporate news America. There
was no need for the conflict to begin with as was
so reported internationally on march 7th, 2003. U.N.
inspectors had complete unrestricted access to go
anywhere without delay, and known stock piles of WMD
were burned, so could not possibly be
completely accounted for by evidential findings
due to the fact that they were destroyed beyond
recognition. American soldiers were put in harms
way to be sacrificed for no better good, but for to
allow as has happened, the misappropriation, or as
some have alleged, the criminal theft of Iraqi
resources, including monies of the Iraqi Development
Funds through Presidential decree 13303. Which
include the unappropriated, desperately needed,
humanitarian aid provisions still denied innocent
Iraqis, such as potable drinking water and food
stuffs. Democratic principles are DENIED the
Iraqis by the neo-con military forces, such as holding
all individuals equally accountable to a rule of law.
The outlawing of torture, or the outlawing of false
imprisonment has not been professed as the action of
the neo-con "liberating" force. Mercenaries are not
obliged to obey any laws for example. And, "Dr.
Germ", and "Dr. Anthrax" are held solely for the
fact that they know of the scientific hazards of
depleted uranium, and may have warned the
uninformed sacrificing American GI, if not held
illegally against their wills by the enemy.
Commanders such as irrational war criminal
Sattler, forbade all men and boys between 15 to 50
from leaving the city of Fallujah, while refusing to
negotiate with anyone, (because as so was openly
confessed, Sattler had no evidence that Zaqari was
in Fallujah) then leveled the city to kill all it's
inhabitants, estimated at that time near 300,000
people. Using a napalm type WMD, cluster dud
land mine munitions, and as reported, nine two
thousand pound bombs in a city 3 1/2 km by 4 km.

Serving for a military not strong enough collectively
to prosecute such lawless criminal barbarity, is
serving for a military not principled in the American
virtues of freedom and democracy. In truth,
serving for such ungodly criminal command is a
cowardly act of treason. George W. Bush is an
enemy of our Humanity.

--

Can I Get a Witness?

"It is now argued that because demon bush is President,
it therefor doesn't matter where the actual crimes scene
evidence for the murder of thousands in America leads to
according to the FBI, for George Walker Bush (666) in
above all the laws of the universe. Despite! the
reason they obtained the warrant, was to charge me for
"threatening the life of an international person", they
instead decided not to as saboteurs of liberation. They
argued after the warrant gave them my personal
possesions, [...]"

Don't miss the rest of the inside scoop to the up
coming public Johnny Wizard trial, cradled within this
last testimony of a King left forsaken by all of America
as unworthy of public discussions in our media.

--
Look at this will ya? DU killing American Patriot
Soldiers, while bush revises our continuing history,
like this ain't really happening. I can only again, beg
you as the reader, to wake up to this bush madness, and
support ME, the mythological Son of Man God King
because: my facts I bring to our table, do not change
from your summation of my unbridled character. (I don't
need votes, but a trust in the good times coming through
for trying something better.) As I have said before, you
don't have to support Johnny by donating a few dollars
for Christ sake, but, to have a care for your own
humanity. Or, will doubting me, unfortunately, change
the truly toxic composition of measured radioactive, and
gaseously microscopic, depleted uranium. For we both as
ALL suffer from the demon bush fumbles of corrupt
ineptitude, disguised as heinous war crimes against
everyone. Crimes of murder, that there is no rational
justification for., then, or now. No good reason to
have bombed, then stole from the billed Iraq as
Dutch-Shell victims. Only irrationalisms. Examples:
What can we do now in Iraq, that we couldn't have under
Saddam? Spend tens of billions in investments on
universal health care, or education perhaps? Why bomb

anyone, when we had complete, unrestricted access? What could bush have demanded for Iraq justly, when his un-elected entourage is responsible for outrages 9/11, the Patriot Act, and Guantanamo? So see, now, we have a really big ego problem. By god, You humans are truly blind without ourselves to be seen as.

Well, not quite.

Don't forget, Our Mr. bush Jr. also participated directly with the 9/11 strategy's, top secret Presidential Directive, of offering no evidence against Bin regarding some crime that wasn't galvanizing the world like the lucky, World Trade Center incidents did in time sensibly. Without 9/11, what would Powell look like from when in August he gave the Taliban 43 million, to then in September, going after those that funded the Justice supporters? How? And, where is the Saddam money gone for the food shipments?! Our Mr. bush Jr. has it secretly he writes. He also writes he will not be accountable to any rules of Law in this Universe regarding the ownership of said monies he has stolen through the UN not chirping. I told you, no leadership. (Good thing we showed up to raise the dead eh? Nudge nudge.)

Justice and Freedom, like God as Nature, be not feared as of.

A friend and myself were discussing political deceptions, and he asked me if I knew what the secret to the universe was, and I said no, what?, he replied, there is no secret.

The politics of living is Humanity's survival, and is what should be as our interests recognized, to be representative. However, there is often dismal public failure to characterize hugely heinous criminal attempts to harm our universal freedoms through unbiased corporate conduct. Justice must be prime, and maybe You as the forever unknown still. It's just, that we don't have customers at National Newscast Central to invest in ourselves as interested benefactor. Why can not the widely publicized, and FREEDOMly available, central questions on 9/11 be asked without answer by Blitzer, or Aaron? Do they actually have US believing it is in not our interests to say as much for Justice? For America? For God as victim? How far would CNN go to discrediting American soldier after American soldier, blindly sacrificed for WorldCom bush and Dutch-Shell bremer, before CNN finally reports on bush's other partners in crime, like Ahmad, the funder of the 'mastermind', Atta.

Why continue? For as the bushmob, to murder cowardly Americans while stealing pensions and selling heroin, is just stupidly dumb, evil and wrong man. So wrote the holy god guy from beyond his own comprehension as a timeless wonder, demon slayer. The dumbass bush crimes against US as God, I will remind you, are very real, and toll many innocent souls. The criminal sabotage bush inflicts in his public responsibilities as America, yearns eternally for accountability to our suffering World, God included.

I will not go silently.

No, it wasn't Iraqi planning, or of Afghanistan's students, it was bush, rumsfeld, Condoleezza,, Ahmad, and likely Mueller as traitors, who decided your wager as American to be devalued into official, unrepresented criminality as bound tyrannical. (Tenant and checheCheney, maybe also..) See, this is why the Patriot Act rears it's direct onslaught against every American, barely too, unchallenged by Blitzer, or Aaron. No Justice for terrorists, is no freedom for bush's america TRULY. As a result, the fascist sympathizing bigots, racists, and war crime advocates, will argue they're inept to comprehend what they know not of, and as we witness, gain easy unchallenged corporate access by ignoring our public sentiment. You don't have to look far for major problems with the, "but bremer said they were freed Iraqis", or the official 9/11 story line, but as a CNN news caster, Your dismissed without care for. I say it doesn't have to be so, oh godless bushite victims censored.

--

Turning Logic on Its Head

Bush's preemptive war policy is a war without just cause. Under international law and centuries of common legal usage, a preemptive war may be justified as an act of self defense only where there exists a genuine and imminent threat of physical attack.

We are all in agreement, in truth we rise, evil is just the deceived disguised. Boo!

The case is wrapped up, and bush and rumsfeld need to be immediately arrested for 9/11, for murdering countless thousands for stolen gain, at the losses to our humanity, that show through every putrid utterance of scum bucket bush, as contempt for our living as humanity through Law. Where a person accused of a criminal

offence without any evidence is clearly innocent. For why I ask you reader, would any unjustified leader of US people blame someone for a crime who wasn't linked to the offense, while working to close investigations, and not follow through with the ample clues to capture the true evil doers? Just how cowardly stupid can soldier families be taken without conviction as themselves worth fighting for?

Justice for all, and glory be to godly.

--

Bush's preemptive war against Iraq doesn't even purport to preempt a physical attack. It purports to preempt a threat that is neither issued nor posed. Iraq is not issuing threats of attack against the United States. It is only the United States which threatens war.

By publicly encouraging attacks against the American People, bush works to do death, on hopes to then maybe?, get what he's purposing we are publicly pushing for as? Blind, dumb, and criminally neglegent; we all are then agreed? To have no publicly known reason to perpetrate war crimes against everyone to steal and murder for Our Mr.bush Jr.?... America's false deity super evil anti-Christ? The terrorist of terrorists?

The demon who marked evil on the map with an "Oh", for Ohpression by slaying everyone as the innoncet and God loving in Our names?

It isn't Our position as humanity, to grant bush free criminal reign over our rights to judge plainly still living. Americans do learn a great deal from Sitcoms thank you very much, and God damn it, we can count too. 2 infinity with everything minumn, and too, where indivisable Justice is of truly being Human to reason as the Living Universe.

Oh, but no, here comes Our Mr. bush Jr. who publicly only confesses as pure evil, nazi vermin, to want to kill our party by actually, factually, robbing from, then murdering everybody as his enemy illegally, irrationally!, and alas, God is truly alone, for CNN, as most others, have no cause to make on Our cult mentality. We are all together as One God, despite corporate news censorship ignoring our calls for Justice, because, WE are living as agreed, whole heartedly, to be worthy of fairness officially. As a democractic political lobby of too, yourself dummy. God hater nazi sharon really publicly supports the murder of

ourselves being, he states over and over again to rob
and murder from your family to be only a jewish thing.
The Universe, could be, something amazing at a real
world level of sustainability, as there is space to
consider so factually as Existence is believing!
Curently however, the corporate break up is not watching
US performing live as recorded, because they victimize
US always. War is the breakdown of communications, but,
bush, the unelected American cop killer, he isn't
listening to any questions not being stated absent your
appeals to be heard as silently victimized, because...
CNN doesn't want to embarres US maybe? All the robbing
and killing bush and sharon does continually then?,
mistakenly? Dead people don't say much for your world,
eh american niebour? Eh?

Hello.

J.

Wow! what a great riff!

--

Psychodynamic Theory

Freud suggested that there were conflicts between conscious and
unconscious forces that influence our feelings, thoughts, and
behaviors, theorizing that conscious thoughts only comprise a
fraction of mental activity, therefor concluding we, as
individuals, are psychologically, more that we can speak as
understood completely. Freud used the term unconscious motivation,
to address that of which we dont consciously know of as elements of
personality, to offer explanation and study of what can not be
stated as direct awareness of the persons living relationship to
existence with our infinite nature as. To reveal these
hypothesized underling forces of personality, Freud developed three
techniques: Free association, dream interpretation, and analysis
of, slips of the tongue. By researching these areas of experience
that are not direct results from conscious abstracts, or
conclusions, Freud hoped to reveal an order to causes that
reflected a hidden instigation of behavior included. (Freud was
secretly a theologian). Freud, naturally, considered that our
personalities begin at the start of development, so emphasized
childhood experience as the foundation, or framework from where our
personalities would be more so dependent upon. Freud formed his
theory around divided states of mind: id, ego, and superego, along
with 5 psychosexual stages to help structure an understanding of
our progressions through human development.

Such wrestling with Freuds ideas, brought me to consider, are our deliberate actions not based on sound judgement? If there are unconscious motivations driving our will, where does that leave principles, as we measure ourselves in honesty? When things are uncertain, do unconscious motivations, gain decisiveness on our faulting conclusions? Can some forgotten childhood experience, unknowingly convince ourselves, one plus one equals something else?

Humanistic Theories

Humanistic Theories emphasize our capacity for personal growth, development of our potential, and freedom to change our destiny. Unlike more defined branches of Psychology that seek underlining hidden forces, Humanistic theories stress self realizations are ultimately, like plans, responsible for the directions we take in personal development, and through the motivations we have as the human species. The phenomenological perspective, speaks of our individual perceptions, be they accurate or otherwise, become our reality, while the Holistic view, speaks of the individual person, being more than individual parts described through divisions of statement, but of a unique entity that is, in part, identifiable to all things mentionable. It would be then right to say, Holistic is a definition that defines its own meaning, as something more than can be completed by its own explanation. Much like dancing poetry that holds lasting truths, or a leisurely good beer on some sunny afternoon. In the field of Humanistic Theory attributed to Maslow, we concede we have desires, that are framed in a hierarchical manner, where the basics for survival are primary, while social and personal needs ascend us through greater living by open communications with the Universe as ourselves.

Social Cognitive Theory

The field of Social Cognitive Theory has categorized personality development, to be attributable through three wide based assertions: Environmental factors, cognitive-personal factors, and behavior, which in turn, interact to form everything. Bandura portrayed personality's development into four main processes: developing language ability, observational learning, purposeful behavior, and self-analysis. Bandura emphasized that our cognitive thought out conclusions, is our personality development. He too however, like his predecessors, also dealt with consequences we can attribute partly to forces we are not solely consciously responsible for, and the strengths of those forces upon our outcomes. The perceptions of where we are at succeeding, Bandura argued is a balance in our beliefs in what we are capable of, and so being, brought forward the outlining term, Locus of control. Internal Locus of control is dependant on how much we believe our particular actions can control some outcome for personal reward. While the designation of an external Locus of control, is a delegation to our self on some situations, as having little ability in our world as malleable to our own command for gratification,

now, or in the future somewhere. Though, it should be remembered, our living existence with nature, wouldnt be entirely hostile to the idea of bringing ourselves enjoyment by simply only trying to better ourselves, and the threat of law winning to protect the community serves better than chaotic anarchy. Not much would ever be gained, if failed attempts were concluded as complete failures of experience. Much of Bandura is widely correct as generalized statements about the human condition, so much so, that his, Self-Efficacy construct, regarding self confidence being crucial to succeeding, is as much a reiteration of his Locus of control theorem.

Trait Theory

Trait theory is an attempt to be more scientific regarding the sometimes, ambiguous nature of getting to the absolute truth of our universal condition as individuals. Trait theory's five-factor model classifies all personality traits to be associated into five categories: openness, conscientiousness, extraversion, agreeableness, and neuroticism. (OCEAN). With the theory parsed with a fluidity for change for an individuals classification as developing, while naturally becoming more stabilized as we grow older to our vises, and conceptions of conviction on who we figure we are. The designations, OCEAN, are almost arbitrary, and are prone to relative bias for conclusions. Objectivity in assessing ones agreeableness, regarding a mathematical certainty for example, only comes from whether the person understands how to formulate the answer. Perhaps it is insecurity of suffering ridicule for being stupid, that an individual would publicly argue with his calculator at the grocery store. Or in another way, ones agreeableness, without question, could lead to doing jumping jacks in Brookland if ones not careful. Now substitute agreeableness with openness, or conscientiousness.

An attempted, conscious or otherwise, confrontation to the limits of relative fallible human reason it would appear this is heading for in the field of psychology's relationship to the categories of philosophy, theology, and the true science of measurement. It is the explanation made through the divisive qualifications of language, that fall us to the deception that we are actually aware as could be of our infinite selves, a living part of existence. In the beginning was the Word, and only some super freaky God could figure out what it meant really, maybe. I could be right, to say I may be wrong on things that are not truly separate from everything else, as effects have causes, and no living thing is separate from existing. So, to successfully compartmentalize our identity, is to include our relationship to the winds on Jupiter, and the electromagnetic properties of consciousness being also timeless in nature. (Science teaches us that.)

Genetic factors are recognized to play a significant role in trait theory, particularly when looking at the comparisons of separated at birth twins, who not only have commonalties in appearance, but occasionally, also in experience with our physical reality, with decisions made, as once thought completely independent, have shown through in life styles, such as employment choices, or naming a pet dog, Toy. Which would beckon to theorize DNA's multi-dimensional space-time design, such as with horizontal gene transfers, to not just a blueprint to making something else, but to some never understandable living holographic relationship to all things in this universe, as intelligence ourselves.

--

A gem of a Johnny..

A Repeat Broadcast

It is God's fault, that is of yourself also, that we, leaderlessly, allow bush to further escape rightful public trial then life term imprisonment. This world could be so magnificent, if that demon bushmob wasn't criminally getting sacrificed so many dying leaderless American People left undefended.

You.

You, yes, You,, If you would help yourself to try questing to preserve freedom as your being stolen peace of pie, you'd be practically sky writing across the world. Can't sell it, can't buy it, but Being alive is what living is all about. Take it from me partner. God's practically wiped out, and the world is falling apart because of George W. Bush's treasonous war action against all of US as the forsaken, Humanity, (Jesus You are.) but, I still see a glimmer of hope. A real possibility that you'll be getting on to spend some quality time doing what we all should be doing, demanding real justice for (Johnn err...) freedom's bounty. Sure, I'm broke, near homeless, hungry, and left forsaken by all you little Jesuses too, but golly, I'm still holding out the dream that you gained something from your boo-da catholic Jewish Muslim Moslem Atheist upbringings. Why must we allow rumsfeld to escape accountability for blindly attacking Iraq to kill US as the innocent? The demon antiChrist Iraqi conflict has no basis for just cause. It can never be what it is not. We had complete unrestricted access, to do anything bush pleased, prior to sacrificing a single person for Halliburton and Worldcom, disappearing billions as the American tax payer, robbing the central bank, stealing the nation's public resources including humanitarian aid, dropping cluster duds on American

soldiers along with tons of toxic waste corporately
mandated as completely safe to eat by the poundful. No
joking. Murdering thousands. Demon bush is really evil
to US all man. It gives me as Creator a bad name the
great Johnster can't disguise as only one big dreaming
little g. I consider the conduct of George W. Bush an
insult to my intelligence, and, I don't like it, nor
wish bush's criminal folly to continue stealing the
lives of good people treated unjustly in anyone's name.
Let the US destroy George W. Bush instead of ourselves
as countless my friend, and be thanked in love as a
person who cared for all that is good about America.
Live god damn you People, live!

Johnny Wizard,
Again as the stupid one,

You

A Better Way
snpd
Like the bushmob
partner's theft of billions through Enron, of which in
Congressional hearings, nobody wanted to know the
pension money is still sitting in the Cayman Islands,
ready to be returned to the helpless victims, like an
American soldier's family being deemed by Congress, as
unimportant to their standard of living. No care right
nazi soldier? Just murder innocent third worlders to
tell your mother how much you care so for her? While
the war criminals, working for Dutch shell, heroin
dealers, and the monsters from Iran-contra, rumsfeld and
tommy, the nazi fucks, search the third world for people
who speak outrage against corporate America funding our
deaths by murder through censorship. While I sit here
writing as Johnny, waiting for a corporate professional
to deem me worth topicing on as unstoppable sweet
goodness. Look, read of our no counter opinion critics
in google 'groups', who publicly call themselves morons
or traitors willingly. Spooky dumb I'll tell ya.
snpd
We are all the Palestinians being counted
without value by corporate dictates ignoring the human
subsidies.

--

Johnny Wizard Reveals
Bush did 9/11

A war plan to kill the people of Afghanistan for Enron's power
plant in India was on the White House desk on the ninth of September.

A plan to blame bin Laden for a crime without providing any evidence. Then 9/11. None of the ample evidence implicated Laden, like none of the suspects were from Afghanistan, so why not seek the true culprits responsible? FBI officers have claimed publicly that warrant requests were sabotaged by someone at headquarters just prior to 9/11. The CIA has publicly claimed stock options were played on the loss of the two airline companies as insider trading. FBI officers claim Mr. Atta received $100,000 in terrorist funding by General Amed, who was meeting with the Bush administration a week prior and after 9/11. Then rumsfeld and bush stood against our humanity without reason to steal our lives, playing out an evil never before shown to sway their capture as traitors to the American dream. I demand my voice be heard through our corporate news services, to accept any debate from those who fight to keep us ignorant on our ability to freely communicate.

(from Google groups tab, us.military.army)

> How can one argue against what is documented as proven fact?
> Do fascists fear intelligence?

Again, we witness no counter argument for bush and rumsfeld's treason against all the American people. They both have struggled diliberately to hide the culprits responsible for 9/11, blamed a nation of millions without evidence to murder for Enron, have attacked the American Constitution, stolen billions from cowardly Americans silenced by the corporate agenda through frauds blatant...

And, they both need to immediately be tried for war crimes, or taken out by loyal American Patriots who will stand up for freedom to be America.

276. Re: Does Bill Laterbach still sell the "Tiny-Tenna"

Newsgroup: rec.radio.shortwave
Date: 2005-03-03 05:15:37 UTC
From: cuhulin@webtv.net
Message-ID: <18042-42269D79-9@storefull-3257.bay.webtv.net>
Source record: 9862

Here is some information on my big time super duper works on most all radios and reallyyyyyyy yanks in them radio stations from far and wide from all four corners of the World.(but it doesn't work at all for me and it never did the day it got here) A piece of Radio Shack (because it says so on my Tiny-Tenna that I own and it never did work at all for me) plastic circuit board measuring one and three quarter inches square.A little black thingy which looks kind of like a transistor to me,,,,,, (let me go get my magnafying glass,,,,,,,) I see a very tiny little brown colored round thingy (I don't know what it is) standing up,about three sixteenths diameter,it looks sort of like one of those smilies we have all seen on the internet before.I see two tiny little round sort of long thingys with four different colored skinny bands around both of those thingys and both thingys are laying on on the piece of Radio Shack plastic circuit board and they look like twins.A metal U shaped bracket that holds a nine volt battey.Coming up out of the bottom of the Radio Shack plastic circuit board is a two strand wire with a clip connector the nine volt battery snaps onto,one of the wires is red,the other one is black and coming up from the top of the Radio Shack plastic circuit board that two strand wire nine volt battery connector wire thingy meaures five and a half inches long.Another two strand wire,one of the wires is red,the other wire is green and the two strand wire has a plug on the end of it for plugging into a radio antenna jack,the wire/plug assembly measures from the top of the Radio Shack plastic circuit board seven and a quarter inches long.OK,I am fixin to wrap the long Tiny-Tenna antenna wire that comes up from the Radio Shack plastic circuit board around end for end around my plastic one foot long ruler and I am going to try to give y'all a halfassed accurate guesstimate of how long that antenna wire that has the Alligator clip on it is,,,, Stand By,,,,,,,,,, Go take a piss break if y'all need to,,,,,,,, it measures about seven and a half feet long,But I did say that is a guesstimate.Yes folks,two bits worth of Radio Shack parts and sell it for $19.95 plus $5.95 shipping & handling and y'all can get rich too! What a Life! I have to watch the North by Northwest movie on tb now. cuhulin

Those two twin round thingys I talked about on my,IT DOES NOT WORK AND IT NEVER DID WORK Tiny-Tenna,are Resistors.I was just now fumbling around in one of my junk boxes for something and I discoverd a package of five (count em,five) Radio Shack 2.2k-Ohm Resistors for something I was going to build a couple of years ago.Radio Shack,Part Number 271-1325. Pkg.of 5. 2.2k Ohm Resistors.Now,if only I can remember what it was I was going to build!

Something you need to think about!!!!

To stay in business with your doors open you got to make money!!!!!! I charge 200% minimum and a a hundred dollars and hour for my labor. So you don't like what I make, BUY ME OUT, it's your and you charge what you want!!!!

Until then don't take about profit that someone makes from working. I have never missed a day to work in my life and I don't remember being late.

Even selctivity will not help all that much in the case of most
noise. Which by nature is broadbanded. When fightening
someforms of digitalnoise, a real narrow IF fitler can sometimes
help. But unless you are trying to dig CW out frm the man made
noise, super narrow filters are really much use. Much better to work
to reduce you local noise. A low noise antenna can really help. From
what I have read the Wellbrook loop,is great at reducing "point source"
noises. I have played with home made shielded/balanced loops, but
the results weren't worth the added trouble. I am currently playing
with a
sycnhronous noise blanker that "slices"/mutes the antenna output for an

adjustable number of mSec with a 60Hz line locked "switch". It almost
works.
Some of the Lowfers swear by this. The "swicth" has to go ahaead
of the radio's front end. I am strting to think that my 9:1 matching
transformer is "ringing".

Oh, Burr....most of the trolling morons in here have NO concept of what it COSTS to operate a small business in America. Not even a part-time business like ours. The taxes, the overhead. Your utility companies like phone, electric, heat, all charge you a higher rate because you're special....you're a BUSINESS.

They see someone who takes $9 worth of parts and thinks he's making a $10 profit. They can't even imagine the other costs involved. But for some reason it's "evil" for an American to do this. But when it comes to a $19 product from Wal-Mart made by Chinese slave labor, well that's OK!

Then there are the cigarettes, lottery tickets and beer that many trollers in these groups think nothing of wasting $19 on.

In the words of W4JYZ...."It's so sad....so, so sad....."

Heya friends
this is pretty cheesy in my opinion. this "QSL" consists of getting my report back with 1 line "confirm your report" or words to that effect and signed. Suppose it is better than nothing but not by much. To think, AM BCB stations used to vie with each other to have nice QSL cards. I got some card stock and printed up some prepared form cards and am sending them with my reports, I've heard about these for years , will see if they do any good. On a happier note, that Grundig S350 is a good BCB DX receiver. Was reading an old post about the legendary R390. When I was aboard ship I had the pleasure of access to one and they are GREAT on the AM BCB. Having said that..I nowadays have neither the dough or room to get one now hi hi. Anyhow more will be revealed. Take care happy thursday

The ham radio hobby really needs to rethink the way that it controls access to the hobby. Continuing to require seriously outdated tests like morse code is a turnoff to many potential amateur radio buffs. Why not try something revolutionary such as live testing for safe and courteous operation using voice and digital modes.

When I listen to the guys on HF my sense is that their average age continues to increase. I also detect that overall participation is way off from a decade ago - lots of open space in what were once crowded chunks of spectrum. I hear very few young and virtually no female voices of any age. Ham radio needs to think of changes to become a worthwhile alternative to the many other modes of communicating that do not require a license. If it continues doing business as it has then it's future will indeed be short - possibly much less than 2050 as mentioned in the earlier thread. The remaining members can look forward to the FCC continuing to divert more amateur radio spectrum to commercial interests that want to use it.

By way of background I come from a family of radio amateurs. My son (an electrical engineer) considered the hobby, but thought the licensing requirement silly and the morse code requirement laughable in todays world. He can talk around the world several ways via the internet. He has a cell phone that does much the same thing a handheld tribander does - allows him to talk with other people. It looks a lot like a handheld, but it costs less and doesn't require a license.

Time for the hobby and it's gatekeeper to wake up before it is too late.

Hey, be glad you didn't start at 45 baud.
Old time RTTY was SLOW.
My first landine used my RTTY TU(modem)
to talk to a friends brand spanking new BBS.
Then I upgraded to 110 ASCII.
And my first hard drive was a whopping 5Meg.
That's not a typo, 5,000,000 bytes.
What was I going to fill it with?
An MFM drive running in a 5 slot IBM PC.
Somewhere I still have the Cassette diagnostics
for the original PC. It was the only PC I had that
supported tape, floppy and "hard file". You've never
lived until you use cassette tape to load a basic program
on an IBM.
My brother in law is still using my first IBM PC to run his small
Bingo supply business. That old 5M keep humming along.
I doubt if anything I am running now will still be kicking in 15 years.

Your comments are certainly going to spawn a lot of commentary! I hope the vitriol stays reasonably low, as I can see where you are coming from. In my short experience, rag-chewers talk about a.) the weather b.) their equipment and c.) their cats.

I wanted to get into amateur radio when I was a kid -- it was exactly the kind of technology I was fascinated by -- but for various reasons never really got beyond building my own VHF "scanner" and learning how to solder. All these years later, the purchase of a SW set has rekindled my interest in amateur. I've recently decided to get my Basic Qualification just for fun.

However, I've noticed many of the same things you have, and I /have/ wondered if the glory days are over, and I'm just too late. I think there is no surprise that the mean age of amateurs has only gone up. With the rise of internet radio, and the scaling down of some of the stations, much the same good be said for SWL, as well.

I decided to go for it anyway, and to even practice Morse (I'm learning at 15 WPM just to set a challenge.) I figure I can give myself a few years on the +30MHz areas until I get my code endorsement (or the ITU recommends dropping code, and Industry Canada follows suit), participating as I can.

I think contests might be a fun way to meet people outside of your local "net", but agree that unless you promise to hook up at a later time, the pressure is really just to work 'em and log 'em and move on. I'm going to a ham swap meet in the summer to scope out my local amateur community.

As someone else said in this thread, amateur cab be about more than talking about gear and the weather on SSB. What the hell. I'll discover that for myself.

One last comment. The funny thing is that the many licensing bodies that give access to the amateur bands have specific rules about what kinds of conversation can take place.

Industry Canada has a requirement that amateur phone conversation (and I'm paraphrasing now) be of a "basic and trivial non-contentious nature." I understand that the FCC has similar wording when discussing the form and content of U.S. amateur phone communication.

So, in reality, amateurs are supposed to fill their conversation with radio checks and weather reports. Trivial bits of tech gossip and rig checks are expected and encouraged, according to the test questions I've answered.

I'm sure that this doesn't limit the actual range of subjects phone operators (or CW, for that matter) chat about. I'm just pointing out that the actual rules for using the public airwaves are pretty clear what you can and cannot say.

That being said, I'm a fan of keeping a good portion of the spectrum open and non-commercial. The airwaves (and the FCC used to be pretty strong about this) belong to the people, for use by the people. Industry has enough of the spectrum. Given they have the R&D resources, they can also work on squeezing more information into a tighter bandwidth if they really need more room.

From what I hear on VHF and UHF, industry uses radio the same way amateurs do: 90% goofing around and rag-chewing and 10% real work. The other day a city bus driver had to tell a number of "phone ops" drivers to stop rag-chewing on the job!

It is NOT the code tests and exams that is the big turnoff -- it is a lack of good old fashioned "Yankee Can Do"

You either see "outdated useless requirements" as a challenge to overcome and achieve your goals or you whine and drop out.

All of the below is such a gross generalization that it is not worthy of a response.

Maybe spend your time training new folks, get involved in emergency communications and promote Amateur Radio.

P.S. Good luck with your silly phones when the big one hits. During our fires in So Calif -- they were useless.

Following the thread on Y.S> (teh now defunct pirate) and the mention
of the odd data bursts before each out burst. I followed one of the
links
and ended up at the GRAM homepage.
Gram is a nifty FFT display program. I have an often use V5 and haven't
checked them out in years.
He has a link to a file that "decodes" to display an image when viewed
with the Gram FFT program.
Here is the link to the FFT image display:
http://www.visualizationsoftware.com/gram/jpeg/face2.jpg
Here is the link to the newest shareware version of gram:
http://www.visualizationsoftware.com/gram/gramdl.html
(The software expires in 10 days.)
And here is the link to the actual "equation.wav" file:
http://www.visualizationsoftware.com/gram/example15.html
Yu will have to click on the WAV button and download it.
Install gram and drop the equation wav file on to it.
Very interesting.
I wish I had recorded some of the data bursts from Y.S.
If, and I have no idea, Y.S. went to this much trouble,
for what is almost an inside joke, he must be very bright
and very dumb at the same time.
I am going to add checking the odd FSK sigs I receive on HF
for this type of "hidden" data.
You have to admit that this is an different use for audio.
As I read the thread I thought the idea of using a audio file to
carry an image as FFT data to be "out there". I guess we can think
of it as another form of FAX or SSTV.
Terry

I've wondered whether it was actually a digital signal at all or whether it was just the noise that was possibly made by the pull toy the fellow got the recording from.

Maybe we'll find out one of these days.

Pastor Peter J. Peters stated last night that he'd be coming on an hour earlier (REGULAR TIME IS 10:00 pm / 22:00 EST // 03:00 UTC M-F) on Thursdays for a while.

5.070 MHz, WWCR, The World's Greatest shortwave radio station - Pastor Pete said so! ;-)

While I cannot agree it is the person you mentioned above, I do
however know first hand that Mr. Hollingsworth has been on
neighborhood patrol from the Time Difference of Arrival Array
on 75 Meters of late, so I guess one should expect more of the
special-people from that HF radio venue to be comming down here to
UseNet, where it's less likely they'll get nabbed by the FCC
and they can still "get it out of their system".....so to speak :)

Cheers.

I have never bought or used a Justice antenna before.I used to listen Chuck Harder www.forthepeople.org www.chuckharder.com on my radios.I have listened to his radio talk show for more than twenty years.He used to be on an AM radio station in this area,either WJNT or WMPQ,I don't remember which station now.Then he went to Shortwave radio,then to satellite.One of the reasons I am going to buy myself a Lyngsat satellite set top box with the dish and hand held remote control in two months is so I can pick up his programs again and there are many other free to air tv and radio programs on Lyngsat too.I used to hear Bill Laterbach's radio commercials about Tiny-Tenna on Chuck Harder's radio talk show.One day I decided to buy one of those Tiny-Tennas,so I placed my order.I was believing those radio commercials about the Tiny-Tenna too.When it got here,I followed the instructions exactly.I installed a fresh 9 volt battery and I tried my Tiny-Tenna out on some of my radios.I couldn't hear any difference whatsoever.Either my Tiny-Tenna was defective when my Tiny-Tenna got here or those claims they make about the Tiny-Tenna are pure hogwash.Of course I know how to properly install a 9 volt battery.I have been useing 9 volt batteries in various things since back in the 1950's.Trailer trash,you say.I have never lived in a trailer before and I say it is wrong to say folks who live in trailers are trailer trash.Why don't you go visit some folks who do live in trailers? Why don't you go visit some folks who live in regular houses? Why don't you go visit some folks who live in apartments and hotels? Boy!,I sure was expecting my Tiny-Tenna to at least do something,I wasen't expecting miracles though.I wonder how many of the parts Tiny-Tenna uses to make those Tiny-Tennas are made in China? Look at the things you own,where were they manufactured? Look around in the stores,look at clothing articles that say,Made In U.S.A.Sure,perhaps the name tags on some of the clothing articles are Made In U.S.A.but where was the rest of the clothing article made/manufactured? Every one of my old eight vehicles I own was manufactured right here in U.S.A.My oldest vehicle dates from 1914,my newest vehicle dates from 1986.Fords,Chevrolets,and two old Jeeps,1942 Willys World War Two Jeep,1948 Willys Civilian Jeep and one Dodge vehicle that dates from 1978.I try to buy products manufactured here in U.S.A.whenever possible,but that is getting harder and harder to do as time goes by.What was the latest product/items you bought,today or yesterday or the day before? Where was it or they made/manufactured? What Country(s)? In China? I do not like buying products manufactured in China,but how can us Americans do otherwise? You Tell Me! I just now took another look at the package of five resistors I bought from a Radio Shack store a couple of years ago.Made in China for Radio Shack.A Division of Tandy Corp,it says right there on the package.I Love America as much as anybody else.I believe in America and American Capitalism.fed govt is

selling us down the River more and more every day! You build a
Tiny-Tenna that actually works and performs as you say it does and you
test that particular Tiny-Tenna yourself and you send it to me and if
does actually work as you say it will,I will tell the World,I will help
you sell more Tiny-Tennas.Keep the power adapter/wall wart,as they say.I
got "took" on my Tiny-Tenna I bought from you,I am not going to send
money and get "took" again.

Hmmm...since you seem to think that learning an antiquated and absurdly slow way of communicating isn't the stumbling block, please tell us why young people are not signing up in droves like they did in the 50's and 60's. And please tell me what "Yankee Can Do" means and how it is supposed to attract badly needed young blood to a rapidly aging hobby.

Sad to say, but your attitude parrots that of the ARRL and it is exactly what is going to kill this hobby. Yes, I know it hurts the pride a bit to realize the test so many hams once had to pass does not produce meaningful results. Much of the ham test is about as relevant as requiring buggy skills of prospective automobile driving licensees. And requiring that new hams pass the old test because the oldtimers had to will just continue to turn the new blood away.

Ii would be nice to say that hams provide a service in times of emergency, but the specific instances where they actually benefited the emergency worker or had a positive impact on locals are fewer and fewer. I've tried listening to H&W nets in hurricane season and they seem to degenerate into chaos more than provide a useful service. People trampling over one another, sending code on top of voice, etc. It is as though many of them were trying for the contact rather than trying to help.

If the designation of licensed radio amateur was a desirable goal then wouldn't we see more young people trying to attain it? But just the opposite it happening. The graying of the hobby and the inexorable reduction in the number of active hams is obvious to anyone who listens in.

And if the greater ham community and the ARRL collectively decides to continue playing gatekeeper by requiring meaningless tests to become a licensed radio amateur there will come a time that that nobody will be knocking at the gate.

If you don't like the conversation, you can always join
in and change it...Can't ya?
Contests only run occasionally...If thats all you hear,
you don't listen too often. The WARC bands have no contests
in general...What would tel and biz want with HF? Useless
for their purposes...Who are you to say what they use the
bands for, if you aren't even a ham? You really don't even
have a clue...Seriously...It's like a circus weight guesser
trying to tell the acrobats how and where they should do
their tricks, even though you have never done acrobatics...
Ham radio is not going anywhere, anytime soon. It does compete
with puters, internet, etc though...No biggie... I can, and do,
talk about anything I want to. Using that as an excuse, is no
excuse. Even the oft blasted code is little excuse these days,
being even the extra class only requires a measly 5 wpm. I hardly
even consider 5 wpm a usable speed as far as CW goes it's so slow
...
They will probably drop that before too long..Ham radio is what
you make it. If *you* ain't a ham, you can't really complain
much. Also, investing in a radio/s can be cheap, or expensive.
Both will work just fine. I'd hardly call myself loaded with cash,
and I've got three whole stations just sitting on this table I'm
at...
More radios on the floors...My first xmtr cost me nothing...Was
built with junk parts..You can get a decent HF rig for 200-300
bucks, or even less if you know where to look. I bought an older
yeasu 50w 2 meter rig for 40 bucks a while back...It's all up
to how much, or how little you wanna spend.. MK

The issue isn't whether I'm trying to enter the hobby or not or whether I like taking meaningless tests. The issue is whether or not the hobby is interesting enough to attract new blood. From what I have seen at hamventions and heard on the bands there are few if any young people attracted to the hobby. It is certainly easier to ignore an obvious shift in ham radio demographics than to do something about it. But the decision to do nothing will mean the hobby will continue to grey and lose active members.

I'm not surprised to hear the FCC talk about taking spectrum dedicated to amateur radio or that they are approving schemes that will surely cause interference on the ham bands...are you? Maybe the FCC recognizes that the ham community is not the force it once was.

Hard to say. There is a significant difference between
a radio amateur and a radio user. A radio amateur
implies a degree of sophistication that you don't get
from a regular old radio user. Remember CB?? The
people who would have found CB trendy would find
cellphones trendy. Simply turning on a 2M handheld
and talking into it doesn't make one a radio amateur;
you need to understand what it is you're doing. I, for
example, don't qualify as a radio amateur because I
know how to use a cell or the internet. I'd need to study
radio theory and understand what it is that I'm doing.
Does that mean I'm for code?? No, I really don't care
about that very much, because there are enough friends
that I have who are content to be Techs without code.

Do the Feds have the right to take away the spectrum?
Sure; but the spectrum that's getting the most noise
(outside of BPL, of course) is the real high end stuff
in the GHz range, far beyond 2M and the other bands
most of us think of as the Ham bands.

Could hams become irrelevant in the future?? Sure
they could if everyone uses cells, but in the end
things like music and movie industry reps wanting
payment for their copyrighted material will probably
influence the direction that satellite, internet radio
and regular radio will go more than the hams. A local
radio station ended up having to sell it's regular
broadcast station because they got way into debt
providing money to the recording industry for their
internet broadcasts, which the recording industry
wanted top dollar for, not the discount that they give
the broadcast radio stations. If the recording industry
does that to satellite and internet streamers, it'll kill
off most of them pretty darn quick, and the "need"
to take the hams' frequencies will evaporate.

The cell may cost less initially, but to use it you keep
pumping money to the provider company. Get a
secondhand 2M, and the cell company's fees will
eclipse it in a year or two. Of course, if you want to
do other things with your cell phone, like do pictures,
that'll cost you extra.

Last time I looked the numbers were actually up.

This is the same refrain I've heard for the past 35+ years. (I was licensed in 1970).

Same as shortwave radio dying, which I've heard for almost 40 years.

Same old story. Heard it before.

I was just now thinking.I think my Tiny-Tenna would make a good Fishing Lure.All I would have to do is tag a Fishing Hook on there,it already has a line on it about seven and a half feet long.BassPro is building a new BassPro store just across the Pearl River from Jackson by a Lake over there in Pearl,Mississippi and folks driving along I-20 over there will be able to see the BassPro store and that will help drag in more customers for BassPro and about a year or so ago I read in the Clarion Ledger www.clarionledger.com the Atlanta A's are going to move to Pearl.There is a new Baseball Stadium being built in Pearl or so I heard.Yeah,I can get over there and show them folks how good my Tiny-Tenna Fishing Lure works.It would make a neat unique and ufonious Christmas Tree Ornament too.Heck,I might as well get some kind of use from my Tiny-Tenna,after all,I paid about $10.00 plus shipping and handling charges for it about seven something years ago.Come on folks,1001 uses for Tiny-Tennas? I am fixin to go over to the Goodwill thrift store in about an hour to see what kind of junk is over there I don't need,there might be Tiny-Tenna over there too.Drinking? I buy a sixpack of Bud Light when I go to the food store once a week.Last Wednesday about a week ago was the last time I went to the food store so as soon as I check out the Goodwill thrift store this afternoon,I will go on over to the food store too.I haven't had a drink since Tuesday night,so I know I am sober.I never drink and drive.Nawwwwww dude,I am not going to be on any of your radio shows for love or money.

So what is an Antenna? It can be nothing more than a little piece of wire that cost nothing or something very complex and composed of many kinds of different parts and costing many millions of dollars that our American tax money pays for.Some Antennas are underground,above ground,laying on the ground,on rooftops,out in the Oceans,out in deep Space,out toward the edge of the known Universe.Some Antennas you wouldn't reconize,metal folding chairs,that metal louver on your house,bed springs,all kinds of things.

Yankee Can Do

Read the Greatest Generation By Tom Brokaw
Talk to the troops in Iraq and Afghanistan
Talk to the New York Police and Fire Dept about 9/11
Read about Steve Fossett' Round The World
That is Yankee Can Do
These folks didn't let the challenges fake em out

College is full of meaningless tests and courses, yet folks take it all in stride.
With your attitude you probably don't have a driver's license

Morse thruput can be 40WPM
PSK31 is about 30 to 50WPM
RTTY is about 80WPM
Many folks here probably can't type at these speeds
So much for slow thruput
It is about communicating not speed.

Whatta ya doing in this slow communication mode ??? How fast can you type ???

All the below is BS.

Morse code is only being used by a few hams to talk to a few other hams. Just cruise the bands and you will find that out. It has been abandoned by the military and commercial services. The ham community is testing for a skill with no use in the real world. And a skill with no value in the much hyped emergency communications world that hams are supposed to be ready to assist in. That is not to say that the hams that do master morse code are not skillful people, indeed they are. But like those who persist in learing Esperanto, they are learning a language with few speakers. Why not test prospective hams for their proficiency at carrying on skilled and courteous communications in something more widely used, like the human voice or digital modes.

You say college is "full of meaningless tests and courses." With such apparent knowlege of the subject why don't you share with us the degrees you have attained that were based on meaningless courses and tests. Given that most college courses are preparatory for a career of one kind or another I am truly surprised that this country has moved much beyond the early industrial age if your statement is true.

I'm still waiting for a coherent explanation of what Yankee Can Do" is and how it applies to attracting of new hams to the hobby and designing meaningful tests.

You and dxace are quite adept at one liners when you can't otherwise carry on an intelligent discussion.

YUP,
I got me one of those "Tiny Tenna" thingys and had a lot of trouble with it. I went down to the Radio shack and got me some plugs and it works a little better.

I got me an adaptor so my headset would plug into the little plug that came with it then I hung the long thingy to the top of my drape in the front window of my trailer where I can watch the neighbors come and go and so they could see my new "Shortwave RADIO".
I took an alligator clamp and a few feet of wire and hooked one end to the trailer hatch and then moved the clip up and down the long wire thingy until I got a station.
The reception ain't to good here in the park but the neighbors think it works great, I just smile and adjust the wires a little. I hope Bill is going to put a volume control on his new version.

Burr

I asked you if you were currently licensed, 'tard boy. If not, then I suggest
you get your fat, stinking, ain't been wiped in weeks ass out there and get
licensed lest the hobby die, 'tard boy.

That was two lines, 'tard boy. Besides not being able to learn the code, and
otherwise rant, what are your other failings in life, 'tard.

Bring it on, piece of shit, bring it on!

You've proven my point perfectly. You really can't carry on an
intelligent discussion - only one liners that you might hear on a
playgound.

Aside from chasing people from this forum who might actually have
something to contribute and otherwise just being an annoying troll,
just what do you bring to this forum anymore. I suppose one recent
claim to fame would be the engineer/designer from Degen who was hounded
from this forum.

The issue is not whether one could "suck it up" and take the meaningless test if they want a license. No doubt, if someone wanted to become an licensed amateur they could learn the minimum speed for code and then never use it again.

The issue is how such requirements are are perceived by and whether they motivate prospective hams to study for one or more licenses. Like it or not licensed amateur radio communication and it's sister hobby SWLing face a lot of competition from other modes of communication and gathering information about the world that were not there 20 years ago. And none of those modes require testing and licensing. That competition is real and the amateur radio hobby needs to recognize that it no longer has the appeal of being the premier method of long distance communication. If the hobby doesn't, it will gradually fade away.

OK, I realize I'm new to this newsgroup, so I probably don't have the
FAQ that may or may not exist, but, Mr. Patrick, can you tell me what
this has to do with shortwave, or even radio in general?

This kind of crime and reporting are in everyone's morning paper every
day, so, now speaking personally of course, this seems to be a waste
in the group.

You post a lot of this sort of thing, as well as some loggings. I,
for one, would sure like to see you post more loggings than news
clippings, especially if they're not radio-related.

Thanks!

Al

Heard 3/2 at 19.25 in the CNMI with booming signalson 6055 kHz in FR
and local vernaculars, with chanting vocals. Should be a nice card!

Radio Tanzania, Dar es Salaam was also there on 3/2 at 19.02 on 5050
kHz with Swahili talk and drum/flute music and station IDs.

Good day for African stations!

Al

You know, I've been licensed for a little over twenty years, not
always active. I hold an advanced class license, not extra. I just
haven't had the time or opportunity to go for the exam, and I really
can do all I want with the advanced class.

Now, this is a general reply to all the mess that's been posted here
in the last few days. The hobby will not die out, simply for the fact
that there will always be those individuals who rise to a challenge
and will study to pass an exam (whether people think it's meaningless
or not) to attain the goal that they want. In this case, the ham
ticket.

It has been my experience that people who have no hope of passing a
technical examination are the ones who bitch and moan the most about
why they shouldn't have to take such a "meaningless exam." True, in
the US we have done away with the high-speed code requirements (except
for the General RadioTelegraph License), but that is because it is a
somewhat outmoded means of communication. Even for seafarers, GMDSS
is taking over and code is used less and less. The fact that one
needs to understand the RF medium one is working in and fully
understand the technical requirements and aspects of it will never
change. Dangerous voltages and currents exist here as well as the
potential to cause harmful interference, so this will "never" be a
plug-and-play hobby. If you think that you can do it like that, you
are a danger to yourself and others and probably bordering on a public
menace.

Even SWLs who tinker with building their own equipment need to know electronics or they have no hope of success. Although there is no license requirements or testing for SWLs (at least no license here in the US), most take it as a matter of personal pride to learn all they can.

As for "meaningless college courses," well, I can think of a few: Psych didn't aid me in my goals one bit, nor did the mechanical engineering courses such as thermals and fluids. But I took them and gave it every effort BECAUSE IT WAS A REQUIREMENT and I wanted my BSEE.

So here I now sit, with a BSEE (B.Sc. EE) that has gotten me good employment, as well as a Microsoft MCSE which has also helped and I am also certified by the Society of Broadcast Engineers as a CBRE AM/FM. All of this paid off, and like so many before me, I rose to the challenge instead of whining and bitching and moaning.

As for contests and people talking about thei radios, well, if you don't like that, then go out and find someone who wants to talk about the things you wish to discuss. It's as simple as that! You certainly are not going to change the meat and potatoes of the ham community, so you will spare yourself an aneurism and have much more success by initiating conversations with like-minded individuals who are willing to talk about other issues. There are so many licensed amateurs in the world that surely you will find someone who wants to talk with you.

Just my two cents, and thanks for listening.

Al

One finger hunt n peck typing system dude here.About two or three words per minute,all depends on how long the words are and how often I scratch me arse and pick my nose,,, hold out your coffee cup and catch this booger,KLINK!!! Go bragg (Fort Bragg is Bragging every day) on your typing skills.Show us how fast you can type,BUT,that doesn't prove anything.

I like MASH and watch it as often as possible. As for the draft, I can't think of a person who deserves drafting more than you. A nice stint in greenland comes to mind, peeling potatoes for four years. I did my service.

That old IBM computer that dates to back around 1990 is still sitting over there at the Goodwill thrift store since a week ago.I know a guy who has worked with computers for 47 years and he knows every computer operating system there is.He told me that old IBM computer works on the old DOS (Disk Operating System) operating system and only old timers know how to program and work that computer.I believe him too.This afternoon,I offered the lady at the checkout counter $5.00 for that computer.I really don't need or want that old computer,but I want it any damn way!

> Any help appreciated.

A Satellit 800 will be a step up from a 7600GR, but will it be worth
$300? I sure don't think so. Why not spend that money on a used
tabletop? You'll get way more bang for the buck that way. Several Lowe
HF-150s have gone for around that on Ebay recently.

Mind you, it's a little weird to call the 150 a tabletop in contrast to
the 800 when the 800 is about 15 times the size of the 150. :)

Best,

Steve

Hello Ducky!

Both radios are superb within their categories. When considering absolute reception, the Satellit 800 is a superior radio to the ICF-SW7600GR.

HOWEVER --- have you tried using a really good antenna with your '7600? Please remember (and note well) that the ANTENNA is far more important to good reception than is the radio.

A good DXer can achieve far more with a '7600 and a good antenna than someone else with a Satellit 800 and a mediocre antenna.

Though it would be overkill to buy a Wellbrook ALA 330S antenna for a Sony portable, just for the "heck" of it I attached my Wellbrook to the Sony. You should have heard the signals "pouring" in! (Of course the Satellit 800 is better yet.)

That said, if you are truly interested in good short wave reception and are willing to erect a proper antenna, then "yes" the Satellit 800 is EASILY worth the $300.

Best,

Joe

414. Do You Want To Know For Sure That You Are Going To Heaven?))))))))))))))))))))

Newsgroup: rec.radio.shortwave
Date: 2005-03-04 00:36:17 UTC
From: Mr_Grossi_2005@yahoo.com
Message-ID: <1109896577.056418.56390@f14g2000cwb.googlegroups.com>
Source record: 9947

http://counter.digits.com/wc/-d/4/ViewerCounterAD

Do you want to know for sure that you are going to Heaven?

The reason some people don't know for sure if they are going to Heaven when they die is because they just don't know.

The good news is that you can know for sure that you are going to Heaven which is described in the Holy Bible as a beautiful place with no death, sorrow, sickness or pain.

God tells us in the Holy Bible how simple it is to be saved so that we can live forever with Him in Heaven.

"For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

Over 2000 years ago God came from Heaven to earth in the person of Jesus Christ to die on a cross and shed His blood to pay our sin debt in full.

Jesus Christ was born in Israel supernaturally to a virgin Jewish woman named Mary and lived a sinless life for thirty-three years before He was crucified.

Three days after Jesus Christ died on a cross and was placed in a grave He rose from the dead as He said would happen before He died.

If someone tells you that they are going to die and in three days come back to life again and it happens then this person must be the real deal.

Jesus Christ is the only person that ever lived a perfect sinless life.

This is why Jesus is able to cover our sins(misdeeds) with His own blood because He is sinless.

The Holy Bible says, "In Him(Jesus) we have redemption
through His blood, the forgiveness of sins..."
(Ephesians 1:7)

If you would like God to forgive you of your past, present
and future sins just ask Jesus Christ to be your Lord and
Saviour.

It doesn't matter how old you are or how many bad things
that you have done in your life including lying, stealing
all the way up to murder.

Just pray the prayer below with your mouth and mean it
from your heart and God will hear you and save you.

Dear Jesus Christ, I want to be saved so that I can have a
home in Heaven with you when I die. I agree with you that
I am a sinner. I believe that you love me and want to save
me. I believe that you bled and died on the cross to pay
the penalty for my sins and that you rose from the dead.
Please forgive my sins and come into my heart and be my
Lord and Saviour. Thanks Lord Jesus Christ for forgiving
me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed
God to save you. Welcome to the family of God.

If you did not say the prayer then you may never get a
chance to be saved again because none of us knows exactly
when we will die.

This means that if you die without trusting in Jesus Christ
as your Lord and Saviour you will be forever separated from
the love of God in a place called Hell.

The Holy Bible descibes Hell as a place of eternal torment,
suffering, pain and agony for all those who have rejected
Jesus Christ.

The good news is that you can avoid Hell by allowing
Jesus Christ to save you today. Only then will you have true
peace in your life knowing that no matter what happens you
are on your way to Heaven.

Servant of the Lord Jesus Christ,
Internet Evangelist R.L. Grossi

One last shot and I'm dropping out of this thread. I have enjoyed both hobbies for many years, and have gotten to know many fine people. Passing a morse test again would be irrelevant. My worry is about the future of both these hobbies.
There must be a reason that many long time amateur radio dealers have folded in the past decade. And it wasn't from being overwhelmed with business. Folks, the signs about lack of interest in the hobbies are there. Whether enough people care to see those signs and change the way the hobby does its business is at least open to question. Here's hoping what I have heard today is a minority view.

Well.......as far as the contesters......they are without question the
best operators in the world. It is really sad to listen to the so called
emergency nets. The Net Control operators have a hard time coping more
than 1 checkin at a time. They really need to listen to some top notch
contesters running a pileup at 250-280 qso's per hour. I am amazed how
these net control type of operators can complain about contesters since
most have no skills for handling a large volume of traffic in a short time.

I personally do not like phone contest's and when I was active I did the
CW contests. It is a real treat to call CQ & have several replies at the
same time. If you stummble you will not get the contacts as most will
only call 3 times before moving on.

If my health/welfare depended on Radio communications I would want all
of the big contest stations & their TOP SHELF operators handling the
traffic.

One other note.....If you like to DX....you can easily hear over 100
countries in 1 weekend of listening to a contest.

73, Ken KG4BIG / KT4ZX in many contests

418. Advanced antenna solution for noisey suburban area ???

Hiya...

Here is one I could use some help with.... As always, I'm always trying to improve my sw listening capabilities. I have an R-75 and two very good antennas on my roof. One is a G5RV and the other is a 200 foot wire that utilizes a coax feed and matching transformer. Both are very good antennas. I've thought about getting a new radio to improve my capabilities and I've tried a few radios on loan from friends. Those radios include the NRD-545, R8-A and R-5000. I've come to the painful conclusion that the performance problem for me isn't my radio or my antennas. Both are good. The problem for me is my area. I live in the northern NJ suburbs and it is a very noisy area. I've read a bunch of web pages on antennas, but I haven't really found any antenna solutions that boast to be ideal solutions for noisy areas. I've got a fairly good understanding about antennas, but I'm not advanced.

Does anyone have ANY ideas as to what would be an ideal antenna solution that would offer me some improvement as far as increasing signal into my radio and limiting noise ???

Money is no object, and neither is effort. I'll spend money on an "out of the box" solution as well as put time into an elaborate home brew project. Performance is key.

If it would help to know more about my current antennas, detailed info about both of them is on my web page. The link is in my signature. Any suggestions would be most welcome.

Michael, you might try the "Wellsbrook Loop" that is so famous in the noisy city-gardens of England. Since the interference you suffer from is not from your own property, the noise-limiting "Hear It", Time-Wave or other processors might also help.

I can vouch for the Wellbrook 330S. It's very quiet and an all-around excellent antenna.

Might also be worth looking at the ClearSpeech DSP unit. I recently added an old one to my setup and...well, I'm hearing very little white noise. I don't even bother to use the squelch anymore.

4 RCMP officers were killed near Mayerthorpe, Alberta, Canada while involved in an operation on a marijuana grow-op. The largest number of RCMP killed at once since the 1885 Northwest Rebellion. This many be small in comparison to other countries, but this is big and terrible for Canada. You can hear regular updates.

Free speech has limits. You cannot incite murder (like occurred before the Rwanda genocide on radio), nor can you deny factual history as a step removed from inciting violence on an ethnic group, but has as its aim violence against the group. Zundel's website is not what sinks him and got him deported and then charged in Germany, it is his continuing advocacy of falsity which has as its aim further violence against Jews. His website obviously does not document all that he has been up to. I have seen news reports from the mid-80's to mid-90's with him saying things like ' the Jews want our pity so they can dominate the world and receive special treatment, we need to take them down a peg and show them who is boss '. If you read what anti-semites said in 1930's Europe, you will understand what the fuss is about. It is an insult to the memory of 5 of the 6 million dead to say it doesn't matter that they died also. Period.

435. Re: OT: Christianity Wedded to Marxism - Democratic Party

Source record: 10119

A consciousness of those in power that their administration of the public affairs has been honest, may, perhaps, produce too great a degree of indignation; and those characters, wherein fear predominates over hope, may apprehend too much from these instances of irregularity. They may conclude too hastily, that nature has formed man insusceptible of any other government than that of force, a conclusion not founded in truth nor experience.

Societies exist under three forms, sufficiently distinguishable. 1. Without government, as among our Indians. 2. Under governments, wherein the will of every one has a just influence; as is the case in England, in a slight degree, and in our States, in a great one. 3. Under governments of force; as is the case in all other monarchies, and in most of the other republics. To have an idea of the curse of existence under these last, they must be seen. It is a government of wolves over sheep.

It is a problem, not clear in my mind, that the first condition is not the best. But I believe it to be inconsistent with any great degree of population. The second state has a great deal of good in it. The mass of mankind under that, enjoys a precious degree of liberty and happiness. It has its evils, too; the principal of which is the turbulence to which it is subject. But weigh this against the oppressions of monarchy, and it becomes nothing.

Even this evil is productive of good. It prevents the degeneracy of government, and nourishes a general attention to the public affairs. I hold it, that a little rebellion, now and then, is a good thing, and as necessary in the political world as storms in the physical. Unsuccessful rebellions, indeed, generally establish the encroachments on the rights of the people, which have produced them. An observation of this truth should render honest republican governors so mild in their punishment of rebellions, as not to discourage them too much. It is a medicine necessary for the sound health of government.

Try to read what you type at least once before you hit send next time.

You're sure "God has a killfile" for those who spread His word.

Qualifies for the all-time dumbest things ever posted, even higher on the
list than most of your commentary. But I'm not condemning you. I'm just
laughing, and you can hope God is too ;-)

Yes, he said that "there is no plan for military action, at the same
time, all options are on the table" or something very close. I don't see
how anybody expects to take him seriously. Will you or won't you invade
Iran, Mr. President? Yes or no? I bet that there's a LOT of debate
internally in the administration as to whether to invade Iran, however I
suspect that Bush has already made up his mind to invade.

For those in North America who can't regularly hear Iran in English,
Radio Havana does a good job of presenting the Iranian view on this
subject. Cuba is on 6000 and 9820 khz between 0100 and 0700, but I find
6000 khz around 0200 to be the best for me.

Thanks. Passport doesn't indicate what language this is in, just
"other". I usually can't tell one Asian language from another. European
languages I'm pretty good at, especially the major ones, but with Asians
I can tell "Chinese" from "non Chinese" and that's it. :) Reception was
fairly good here on West Coast USA. I noticed the absence of jamming,
which I thought odd, but sometimes the Chinese jammer covers up the
signal and sometimes the jammer is weak. Depends on frequency, as far as
I can tell. What does 1200 UTC equate to in local time for Saipan?

I see no reason to become a ham. Never did. Even back when I first
started listening to SW, some 20 years ago, I saw ham conversations as
incredibly dull compared to the programming of the regular broadcasters.
I've NEVER been an avid listener to the ham bands. I'd rather listen to
North Korea. I'm just over 30 years old. Ham radio is increasingly
irrelevant, at a time when China and WWCR are adding transmitters. Hams
no longer provide essential communications in an emergency, not with all
the other methods of communicating. Hams no longer provide worthwhile

experimentation. Hobby broadcasting would reinvigorate the hobby, but
the oldtimers refuse to consider it. They're arrogant and irrelevant,
and rarely communicate anything of importance. Amateur radio's glory
days are long gone, and after the boomer hams die the hobby will die
with them.

/snip

Somewhat outmoded? Used less and less? Here's an update:

Even at sea, where code died a slow death as far back as the 1960's (some hangers-on who liked it persisted through the 80's) there was no need for any radio operator to have memorized more than two letters of code after that point. Except for an outdated concept of licensing. That is also long gone from the maritime world, with no radio officer aboard any longer. Why? Simple economics. In concert with great advances in safety of life at sea, the need for either code or the radioman who knew it faded away completely a long time ago.

I agree with you that anyone who experiments or legitimately repairs or modifies radio transmitting equipment should be licensed, and for the good reasons you explained. But the fact is that neither aircraft nor marine vessels in private or commercial or military use whose lives depend on communication, have any such requirements for the operators. It is in fact quite "plug-n-play" and this is the major reason the MF and HF bands are still in use at all. When that equipment is no longer competitive with modern satellite systems, we will see it disappear entirely from commercial use. By that time new technologies will have other uses for the spectrum, and its hard to imagine how far some of that will go. But it is no longer relevant to continue to drag old habits (CW) along, unless you are forming an "old habit we do for fun" club. If Amateur Radio allows itself to be relegated to that category, as the legal team proposing new BPL rules argued in open court last Fall (which they won by the way, in spite of heroic efforts by the ARRL and others), it has nobody to thank but itself.

The antenna shown uses fiberglass tent poles. They are 2ft each. The larger version uses fiberglass rods from Tap Plastics. They are cut to fit the back of my suv, something like 65 inches. I'd love to use the antenna with the amount of wire indicated on the Wellbrook site.

I suspect someone could roll their own Wellbrook. I believe they use a very wideband transformer and a low noise JFET amplifier. You can find wideband transformers on ebay (North Hills). JFET amps aren't that hard to build. The transformer lets you float the loop and does the double to single ended conversion.

I agree with that. But the FCC has approved low-power FM broadcast licenses, they just haven't got their heads out of someplace to make it easy enough that it takes hold. And there is no conceivable reason that every neighborhood couldn't have a dozen such stations if they wanted them. There are almost as many groups advocating the free right to such low power broadcast (without any kind of license at all) as there are those that espouse income taxes to be unconstitutional. Hopefully the FM broadcast groups actually have a chance of persuading legislators - we know taxes will never go away, lol.

You have very good advice re using a Wellbrook ALA 1530/330 as they are
inherently less noisy than wire antenna's.
If mounted high on a pole with a rotator you will get a vast improvement on
your present setup.
See PASSPORT for good reviews on the Wellbrooks
Also, you can read my own experiences with active antenna's at the link
below

Parents who give their kids names like "Peter Peters" and "William
Williams" may think it's funny, but the kid has to live with it for a
hundred years. I suspect that Peter Peters has some deep seated name
issues that led him to kookiness.

http://www.halturnershow.com/MediaFrenzy.html

As of 9:15 PM Thursday evening,
I HAVE COMPLETED A TAPED INTERVIEW WITH:

CONCERNING MY WEB SITE COVERAGE OF THE KILLING OF THE FAMILY OF A
FEDERAL JUDGE IN CHICAGO EARLIER THIS WEEK

I was interviewed by DATELINE Correspondent John Murphy. The interview
was conducted in the New York Women's Republican Club on West 51st St
near 5th Avenue in midtown Manhattan. Even though I am my own worst
critic, I really think I did all right. Of course, it remains to be
seen what ends up being broadcast.
Tune-in to DATELINE this coming Friday evening on the NBC Television
Network!

Jack and sdaniel13 are giving you good advice. The best shot you have in
a noisy area is a small amplified loop. A shielded loop would be best.

Isn't capitalism wonderful? The ability to take something worth $200 and sell it for $400 is what won the cold war. Even the Chinese have caught on-how much money is spent in southern China to make a radio that can sell for $100 or more in America? Liypn sells the Degen 1102 for $50, while Kaito sells it through "legit" channels for $100 in the USA. Even adding in shipping from Hong Kong, you come out ahead by buying the Degen direct from China. And $50 is probably 10 times what it actually costs to make an 1102 in US dollars. So Kaito is selling the 1102 in America for a 95% profit margin. No wonder every factory in the world is moving to China. Eventually EVERYTHING will be made in China, and tianli will be all the more irrelevant. I'd love to replace every one of tianli's radios with Tecsuns, and then watch the ensuing nervous breakdown. It's off to the funny farm for people stuck in the cold war...

I think it's interesting sometimes to see what various receivers are going for on ebay...if only to see what the 'market' is like. It's also fun to theorize about what's happening in the extreme cases.

Don't worry, God has a permanent kill file called the lake of fire. All
spam'ers are going to end up there and they will have to listen to the
spam they spewed repeated continuously while they cook for eternity.

Let me clear up the confusion for the both of you.

People that that don't take the President seriously loose elections and
at the hands of the US military are either dead or in jail.

Hope that clears things up for the both of you.

What kind of noise?? Like powerline type stuff?

I had a bad transformer about a half mile from here and when it started
up, it was amazingly bad. I had to track it down myself (wasn't hard to
find, just a short walk with the dog and I could hear a nearly identical
sound like the noise I heard on all my radios, BZZZT!!
BZZZZZZZZZZZZZZZZT!, and an occaisonal SNAP! SNAP! When I called the
electric company, I got the, "Oh, that one's on our list!" About six
months later, it wasn't done and was still about 6 months away from
being replaced. A direct hit by lightning moved it all the way to the
top of the list a few days later. It was well worth the 5 hours without
power to finally get it fixed.

Probably for the same reason I keep answering the same antenna
questions over and over again. Sometimes to the same people.

Actively insulting someone is being aggressive not being passive
aggressive.

I read your logs. I noticed you spent time on the 31 meter band.

I don't want to pick apart the logs you post but it is useful to know
what people like you are able to hear.

Tomorrow morning I may try tuning around 19m in hopes of hearing some
Arabic from Middle Eastern stations. I noticed that the Saudis have a
prayer service on 15205 between 1600-1800. I'll have to recheck Radio
Farda freqs for that time too.

For the number of signals transmitted on them I seem to pick up the
fewest stations on the 22 and 19 meter bands and for the power they
transmit the Mideast is usually weak signals. Here in southern
California they don't get much bang for the 500kW buck.

Source record: 10047

Al Patrick <arp@_NOSPAM_inet4u.com> wrote in
news:112b9aia9m9lnc9@corp.supernews.com:

Hi Al and others. I can basically see by the responses to your post which of the posters are Jewish and which aren't. Why don't we all just check in, either by current religious affiliation or by the affiliation that we most associated with as we grew up.

I'm Catholic.

How about the rest of you? It will help us all to see the logic behind your responses.

Regardless of how many Jews died in the Holocaust, forcing people not of Jewish heritage to constantly be reminded of how many Jews died does a major disservice to the victims of other Holocausts before and since.

Examine the word Holocaust: For your edification, it is not a Jewish term nor a term meant to apply exclusively to the debacle of WWII.

Main Entry: ho�lo�caust
Pronunciation: 'hO-l&-"kost, 'h�- also -"k�st or 'ho-l&-kost
Function: noun
Etymology: Middle English, from Old French holocauste, from Late Latin holocaustum, from Greek holokauston, from neuter of holokaustos burnt whole, from hol- + kaustos burnt, from kaiein to burn -- more at CAUSTIC
1 : a sacrifice consumed by fire
2 : a thorough destruction involving extensive loss of life especially through fire <a nuclear holocaust> 3 a often capitalized : the mass slaughter of European civilians and especially Jews by the Nazis during World War II -- usually used with the b : a mass slaughter of people; especially :

Continuing, visit
http://thomas.loc.gov/cgi-bin/cpquery/?&db_id=cp108&r_n=hr130.108&sel=TOC
_5005& (or http://tinyurl.com/4lbwf)

It is estimated that one and a half million Armenians were killed.
(ARE MEAN KNEE INS, not A MARE A CANS)

From 1932 through 1933, this man-made famine lead to the death of 5 million of the politically resistant Ukranian people.

�������..over six million Jews were murdered.

Khmer Rouge forced civilians into labor camps working for minimum rations. In all, over two million civilians were killed.

As a result, approximately two million non-Muslim people have been killed by the Islamic Front.

And it goes on and on and on and on, even in modern times.
http://www.genocidewatch.org/genocidetable.htm

There are ample resources to research this topic online. It is truly tragic that any nation in the world would adopt Holocaust Denial laws. We have very little freedoms left, and those salivating in this thread to see anyone prosecuted for his/her justified/convoluted views on the tragedy affecting others are truly pathetic.

'In Germany,
they first came for the Communists,
and I didn't speak up because I wasn't a Communist.
Then they came for the Jews,
and I didn't speak up because I wasn't a Jew.
Then they came for the Trade Unionists,
and I didn't speak up because I wasn't a
Trade Unionists.
Then they came for the Catholics,
and I didn't speak up because I was a Protestant.
Then they came for me,
and no one was left to speak up.'

(attributed to Pastor Martin Niemoeller, Dachau, Germany, 1941)

Perhaps now it should read,

In America,
they first came for the Jews,
and I had to speak up since I feared prosecution,
then they came for the Catholics,
and I didn't speak up since they were not Jewish,
Then they came for the Protestants,
and I didn't speak up since they were not Jewish,
Then they came for the Trade Unionists,
and I didn't speak up since they were not Jewish,
etc, (fill in your own lines)

Of course, those of you that are Jewish will likely react vehemently, just as so many Jewish people did concerning "The Passion of the Christ", you remember, the movie that was going to destroy Mel Gibson, but that did quite the opposite. I remember the spokespeople from various Jewish groups airing their view on how awful the movie was, though they never saw it. Even when it became evident that they (the spokespeople and the Jewish public at large) were carrying things to a ridiculous extreme they nevertheless continued with their tirades.

G-d bless Israel and the Jewish people, (I believe that he already has), and may G-d bring us understanding in our interrelations with them.

I could never understand that attitude. It is true that the state of the art is such that building something as sophisticated as commercial gear is pretty much out of reach of most amateurs, low tech gear is easier than ever to build. Station accessories, qrp gear, ect are much simplified by ICs. Oscillators, amplifiers, regulators, ect are all available in IC form. Just assemble the blocks. In any case, if one wants to do it completely from scratch, the components are still readily available.

Lloyd,

We'd all better know who you're addressing if you did a *little*
quoting. Some of us get accused of quoting too much so I guess you're
just helping level out the average. ;-)

Anyway, Check out http://scripturesforamerica.org/ You'll find lots of
material, including a link to a FREE Bible Law course (only online I
think) which is the very same that Pastor Peters was/is offering in hard
copy for $10 per lesson to cover the printing, mailing, grading, etc.
That link is http://www.moseshand.com/

Finally, to your question: I'm not too sure about online available
archives as I just did a quick scan and didn't see it. HOWEVER, He does
have thousands (? - well over 1000, anyway) of recorded sermons and
there is no set charge to get on the Tape/CD Ministry whereby you will
get four messages every month for FREE. He would very much appreciate a
contribution to help cover the costs. HE decides what four tapes or CDs
you get each month and they are generally newer messages. He has LOTS
of older messages that can be ordered very reasonably and he will
provide a catalog from which to order. Some of the subjects cover 15 or
more separate messages. (King James ONLY Deception, about 12 or 14; The
Sabbath 4 tapes (BOTH very interesting sets) and LOTS of other subjects
are very well covered - at very reasonable prices.)

He also has a wide selection of books written by himself and others.
I'm sure some of his detractors wish much of this material were no
longer available! ;-)

You can't judge the man or the message by what his detractors accuse him
of. Check it out for yourself.

Al

Nope. It just draws little critters out from under their rocks and
rotting bark. I enjoy seeing the snakes squirm as they attempt to
detract from the message he has to deliver! :-)

You can sometimes tell by the comments that follow just who the sons of
the devil are. You can feel the darkness that pervades their miserable
lives. You can tell who is on the Lord's side and who is aligned with
the forces of this world.

HAVE FUN! It won't last forever! :-)

Al

See what an ANC-4 does for you; if there's a single noise source
that's most important, it will knock it out. Just use any two
of your antennas as inputs.

Even if it doesn't help the noise (say it's coming from all over)
you can amuse yourself listening underneath MW stations for the
what's there.

What he said was not confusing at all. You simply lack comprehension skills.

It would be the same as saying "Invading CanaDuh is not our plan, having said that, all options are on the table".

What would be meant by that is that at present there are no plans to attack Canaduh, but if CanaDuh really screws up bigtime we may have to rethink things, and if an attack on CanaDuh is warranted we will do it.

WNTP 990khz Philadelphia, PA TEST
Date(s): March 4, 2005 (Late Friday night into Saturday morning)
Time: 00:00AM EST until 02:00AM EST (2 Hour Test)
Modes of Operation: 50kw Day Pattern
Programming: 50hz thru 10khz test tones, Phonetic Voice ID's, Dead Air

Notes: CE Rene Tetro will be conducting an audio proof of the xmtr
after making some changes to the system. Mr. Tetro will be measuring
frequency response, THD, and IMD products of WNTP while running full
power on the day time antenna. If time permits, he will repeat these
tests using the standard 10kw night pattern. This is not a DX test.
There will be no Morse Code ID's, and frequently there will be "dead
air". It is hoped that DX'ers will be able to hear some of the tones,
especially those in the 2-4khz range.

Tones will be transmitted at four modulation levels: 95%, 75%, 50%, and
25%. Rene has also agreed to run some limited phonetic voice ID's. These
will be a high pitched female voice, IDing the station in phonetics.

THIS IS WNTP PERFORMING TRANSMITTER TESTING.
WNTP. WHISKEY NORWAY TANGO PAPA TESTING.

Reception reports can be e-mailed to: rtetro AT pobox.com

Snail Mail via: Rene' F. Tetro, Chief Engineer, WNTP-WFIL
117 Ridge Pike, Lafayette Hill PA 19444

> Any help appreciated.

Ducky, do you know anyone who already owns an 800? Is there anyway you could spend some time listening to an 800 before making a decision about what to buy? That would be the ideal scenario.

If you scout around on the web you'll find many reviews of the 800, but it's hard to tell just from reading a review whether the improvement you'll get from an 800 is 'worth' $300. After all, what the step up to the 800 is worth will depend not just on the 800 and the 7600GR but on how big an investment $300 is for you. To me, $300 is a pretty big chunk of change. If I part with it, it will only be after a good bit of research and probably a fair amount of reluctance. On the other hand, some people are willing to spend $300 on a lark.

One thing Joe mentioned that's very relevant here is that the 800 will accept a much larger antenna than the 7600GR. So, if what you really want is a receiver that can tolerate a large, outside antenna, then the 800 might suit your needs. On shortwave, you should never expect the 800 to deliver the performance of a Palstar R30 or a Lowe HF-150. On the other hand, the 800 will offer you FM and airband coverage, which may well interest you. Clearly, a lot is going to hinge on what you want from a receiver.

Good luck with the decision and please let us know how you make out!

Steve

552. DRM Trials in Mexico

Newsgroup: rec.radio.shortwave
Date: 2005-03-04 13:03:00 UTC
From: David <rickets@knac.com>
Message-ID: <b3ng215j6445gqipaakottogpniqegf640@4ax.com>
Source record: 9986

DRM Tests Begin in Mexico
The Mexican government is due to select a digital radio technology this year and has authorized testing to begin for Digital Radio Mondiale for the AM band. The public radio network is carrying out the testing.

Mexico is considering both IBOC and Eureka-147 for its FM digital technology.

"DRM is recognized as the worldwide standard for shortwave," said Jorge Rodriguez Castaneda, the director general of radio and television systems for the Mexican Ministry of Communications and Transportation.

"We will study DRM for application in the AM bands, and maybe the FM bands in the future."

While the DRM system covers the broadcasting bands below 30 MHz, the DRM General Assembly plans to vote on a proposal to extend it to the broadcasting bands up to 120 MHz at its meeting in Paris next month.

During a DRM symposium in Mexico City on Feb. 9, 80 attendees heard a live broadcast of Radio Educacion from analog medium-wave/AM to DRM, as the Mexican testing process began, according to the DRM press office.

For the symposium, Harris Broadcast installed a DRM modulator board within a DX50 transmitter, and RIZ installed a 200-watt SW DRM transmitter system on 25.620 MHz. Symposium attendees heard DRM live on shortwave courtesy of DRM members Christian Vision (from Chile); Deutsche Welle (from French Guyana); HCJB (from Ecuador), RCI (from Canada), Radio Netherlands (from Bonaire); and TDF (from French Guyana).

Last month, DRM members Texas Instruments and RadioScape said they are developing software and hardware to support the design of lower-cost DRM consumer receivers. TI will supply the DSP -based digital radio silicon along with RadioScape's software-defined digital radio technology, enabling consumer receivers to have DRM, Eureka-147, FM, short-wave, medium-wave/AM and long-wave capabilities.

DRM's European commercial launch is to take place later this year.

Well, marajuana might well be a "peacefull drug".
But the crazies who grow it are more into the cold
hard cash then any heallthy effects. I have stumbled across
a few weed patches while hiking in eastern KY. From the
fish hooks on monofiliment at eye level to the bear trap,
which I took with me, it is clear they are anything but "peace
luvin" hippies. It is no surpise to me that the police go in with
full combat gear when tackling a growing operation.
And the thoughts of an illegal, like there any legal ones, meth
lab gives me the willies. About a year ago some idiots had
a leak in their mobile meth lab on I75 south of the Berea exit.
They got 3rd degree chemical burns, the police got to test
their new chemical suits and I75 was closed for over 5 hours.
I just can't wait until some winner has an anhydrous amonia leak
in a residential area.

John 1:5 And the light shineth in darkness; and the darkness comprehended it
not.

John 3:19 And this is the condemnation, that light is come into the world,
and men loved darkness rather than light, because their deeds were evil.

John 12:46 I am come a light into the world, that whosoever believeth on me
should not abide in darkness.

Acts 26:18 To open their eyes, and to turn them from darkness to light, and
from the power of Satan unto God, that they may receive forgiveness of sins,
and inheritance among them which are sanctified by faith that is in me.

2 Corinthians 4:6 For God, who commanded the light to shine out of darkness,
hath shined in our hearts, to give the light of the knowledge of the glory
of God in the face of Jesus Christ.

1 John 1:5 This then is the message which we have heard of him, and declare unto you, that God is light, and in him is no darkness at all.

I don't have access to an SAT 800 to try. I live in an apartment. I clip a reel antenna to my Sony 7600GR and it does ok. I just don't know if the 'upgrade' will be money well spent as I can't erect an outdoor antenna. I would be using the SAT 800 on the whip antenna or a clip on wire. Thanks!

576. Pastor Peters teaching on PRAYER

Newsgroup: rec.radio.shortwave
Date: 2005-03-04 14:22:50 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <112grpkgmg8lke0@corp.supernews.com>
Source record: 10062

Pastor Peter John Peters, Scriptures for America, is on right now - 9:00 am EST / 14:00 UTC on 9985 and he's teaching / preaching on the POWER OF PRAYER.

He'll be back on at 12:00 EST / 17:00 UTC on 12.160 MHz and again on 5.070 MHz at 10:00 PM | 22:00 EST / 03:00 UTC. He usually has a different message at 22:00 EST / 03:00 UTC. Often he is on live at that time. The current msg. will repeat one hour later, same freq. The 10:00 PM | 22:00 EST / 03:00 UTC message will repeat again six hours later on the same frequency, 5.070 MHz. That is 04:00 EST / 09:00 UTC.

This message is a VERY POWERFUL MESSAGE ON PRAYER - AND THE POWER THEREOF! I've heard it before.

Some people don't seem to really know until it is convenient to expose the fact -- or when certain other events happen.

1) Didn't Clinton's "Fulbright" suddenly learn that she was jewish? Oh, the hot air balloon concerning some former Russian satellite country wanting to run her for president was probably just preparing the U.S. people to accept the Cal. governor as a presidential candidate. Some say he and Hillary may go head to head in '08.

2) I heard of another lady who found out when she was attempting to get her name of the Catholic roles, I believe. Seems her parents had become cryptic jews and were posing as Catholics. Don't recall all the details, but expect I'll run across them again.

WWCR, 12.160 is booming in loud and clear with Derry Brownfield and his Common Sense Coalition. He does make a lot of sense. Might want to check it out.

Also, while you're there, you won't even have to change stations to get Pastor Peter John Peters and Scriptures For America Worldwide at 12:00 noon EST / 17:00 UTC. :-)

I am not a member of SFBOT and have no interest / investment in it.
Thus, all standard disclaimers!

However, it is an auction house that trades precious metals, mainly the
American Liberty Dollar, ALD.

This message was just posted in the ALD Yahoo group by the owner of
sfbot. He now will allow one and all to obtain a seat on the floor of
sfbot - FREE - for the purpose of bidding on the purchase of same!

ALL below the double line was clipped from his post this a.m. The
"date" is actually the time on THIS DATE.

Al

Fellow LA,

Greetings from China. The land of no political expression, but
raging capitalism! I am presently involved in a number of projects
and can no longer complete my duties at sfbot (http://sfbot.com)
to my standards. So I've decided to put sfbot administration and
controlling interest up for auction.

http://www.sfbot.com/cgi-bin/Auction?cmd=view&listingID=1544

This is total turn-key. Winning bidder will have controlling
interest, domain name transfer and one (1) year of technical
support. You can register for a FREE sfbot Associate membership to
participate in the auction.
sfbot is my baby and contribution to the FREE MONEY MOVEMENT!
In my eyes it has been quite successful and a worthwhile project. I
feel it is just better to put the exchange in the hands of someone
who has the time to devote to it.
Feel free to ask any questions, as usual I love talking about
and discussing sfbot and its necessary niche in our movement. Happy
trading!

Mark Queen
sfbot Administrator

according to my friend:

800 has 3 useful selectivity choices, the 150 has limited choices
800 has a selectable sideband sync that can be used with a 6KHz
filter, the 150 uses only the 2.5 filter
the 800 has a bass and treble, 150 none
800 has fast and slow AGC, the 150 none
the 800 has a keypad with up and down buttons, the 150 has none
the 800 sounds better
the 800 has more memories
the 800 has better performance
the 800 can be bought for less than $300, he got his for $280 including
shipping, the 150 cost over $400

he sold his 150

Big front-facing speaker. Tone controls. Numeric Keypad included.
More dedicated buttons vs carousel arrangement.

The 150 is nice if you have the Key Pad option, an external speaker
and computer control (which requires another option).

QST de W1AW
Propagation Forecast Bulletin 9 ARLP009
>From Tad Cook, K7RA
Seattle, WA March 4, 2005
To all radio amateurs

SB PROP ARL ARLP009
ARLP009 Propagation de K7RA

This week saw a quiet sun, which will be a frequent observation over the next few years. The average daily sunspot number was down nearly 31 points to 14.9, and average daily solar flux was off 21 points to 76.3. Planetary geomagnetic activity was down just slightly, and mid latitude activity was just about the same as the previous week.

Unsettled to active geomagnetic conditions were expected over last weekend (February 26-27) due to a strong solar wind, but the only day with even slightly unsettled conditions was Monday, the last day of February, and any activity was brief. All week the Interplanetary Magnetic Field (IMF) pointed north, which shielded the earth from any solar wind. The sun was blank most of the week, with only small sunspot 739 transiting across the visible solar disk.

Check http://www.spaceweather.com/glossary/imf.html for a review of the IMF and how it can affect geomagnetic stability. Also check a site I haven't seen before, http://www.windows.ucar.edu/tour/link=/glossary/IMF.html&edu=high. This was submitted by Jon Jones, N0JK.

Over the next week expect a rising sunspot count and solar flux, with flux values peaking above 100 around March 11-14. March 6-9 could see some unsettled to active geomagnetic conditions based on activity during the previous solar rotation.

This weekend is the ARRL International DX SSB Contest. Don't expect great conditions like when the sunspot cycle was higher, but at least we are moving toward the spring equinox and the geomagnetic conditions should be quiet.

Last week's bulletin stimulated a couple of questions about resources for understanding sporadic-E propagation. Go to the URL for the ARRL TIS propagation page mentioned a couple of paragraphs down, and check out the two-part "Sporadic-E - A Mystery Solved?" articles in PDF files. You will need an ARRL membership to log in to the web site to read this. There are other articles on other propagation topics on the same page that are available for anyone to

read.

If you would like to comment or have a tip, email the author at,
k7ra@arrl.net.

For more information concerning propagation and an explanation of
the numbers used in this bulletin see the ARRL Technical Information
Service propagation page at,
http://www.arrl.org/tis/info/propagation.html.

Sunspot numbers for February 24 through March 2 were 17, 15, 27, 12,
11, 11 and 11 with a mean of 14.9. 10.7 cm flux was 80.3, 78.2,
76.6, 75.8, 75, 73.7 and 74.6, with a mean of 76.3. Estimated
planetary A indices were 5, 9, 9, 8, 12, 11 and 12 with a mean of
9.4. Estimated mid-latitude A indices were 4, 9, 9, 6, 8, 10 and 8,
with a mean of 6.6.

I always thought that BCB reception was more limited by interference
from stations on the same frequency rather than any propagation limit,
at least CONUS. You can hear hams coast to coast on 160 meters. Granted
they use sideband and a smaller audio bandwidth, but the hams aren't
pumping out 10kw either.

No! You think we want illegals up here? It would just crowd up our
cities. Much of that empty space isn't really habitable most of the year
anyways. We only take rich Mexicans up here in Canada; I think they have
to invest $20000 per person in the local stock market or banks and leave it
there for 5 years.

Besides, they'd just sneak across the very long border into the USA.
Someone has to pick the strawberry crops.

> Where have you been. The Great Liberty Net got run off of 3950 about 2
> years ago. There's only 2 or 3 of them left anyway.

More like 7 regulars I count. Mostly newbies. Many of the old original
Lib Netters are now either 6-feet under and pushing up the
One Eye's Susan's in front of grey marble markers or are MIA.
Gotta hand it to Vic however. He's been in there rarely missing a
beat for years and he does have a good signal across the Lower 48.

Also curious, it seems like most of the regulars don't check in for the
first
hour-an-a-half of the proceedings. I've heard around a few
places that some think that Vern is over-monopolizing the net for
the first hour or so, and the regulars just sit around and wait for him to
go away and bugger-off to the DX window or 40 before they'll
check in because they alleged can't stand his 20+ minute long
monologues. (This is rather curious, as Harrison k4gar (sk?) from
Florida used to the -very same thing- a decade ago, transmit for
1/2 hour at a time! Only difference was Harrison's "program content"
was -far more wacky- and was chock-full of conspiracy theories than
Vern's more mainstream style, which reminds us more of Jim Leherer on
PBS!

Just the kind of stuff that would bore a chemtrails believing, bible
thumping, flagon-my-VFW-ballcap wearing ham radio fruitcake
to sleep in 30 seconds flat or less.......(hint)

> Maybe the profit can predict a good frequency for them to meet. They
> sure need one.

Please....don't go there. Profit Stair plus the Liberty Net are
like having a chocolate cake with Hebrew National Deli
Mustard icing on the top. Two amusing radio shows which
are mutually incompatible. Like Microsoft as someone else
correctly eluded to.

This is like trying to put four D cells in a C cell radio.

> Never hear Kevin on there any more. I guess he's too big for 'em now
> that he got promoted to head of NatVan.

Another former Lib Net member, now long gone and MIA.

> It was more fun when Kind Jewish Indian and Sir Sidney gave them
> what-for.

KJI Day-veed and BLB Sir Sidney have both been getting
on 14.313 on the weekends of late. Yes folks....that 14.313...
the same one that Herbie used to play on a
Decade ago. It's not quite what it was in the days of
Mikie, Herbie and Porkbutt, but when Doug from Texas
is on, ole KJI and BLB come out of the woodwork like
roaches. Seems the great ham and champion Texas
chili cooker knows just how to push those shiny red
candy colored red Ren and Stimpy type buttons to
get ole David spinning around in a counterclockwise
direction at close to 100 RPM and it is VERY funny
to listen to when the ball gets to rolling. Apart
from this however I very much doubt if you will ever
hear KJI, BLB, ART or any of the other cast
of clowns go head-to-head with the Lib Net ever
again like they used to, as if they did my guess
is RH would be on them like the proverbial white-on-rice.

It is curious to note however that BLB and the guy from
CO and NV have been on 3.947 of late up until
perhaps 15 minutes before the Net is to start, then they
go QRT. Probably best this way. Problem is another
group in the Southeast has been taking over 3.947 right
after they go off or QSY down below 3.820 so the
freq is "kept perpetually busy".

What can I say folks...it's all your typical "ham radio frequency
panty raid" type stuff we've heard on 75 Meters for going on
25 Years. Yawn (waiter...please bring the next appetizer on
the menu please.....? Thank you)

> Wonder what ever happened to W9ART. And doofus jammer.
> And Tarzan.

ART is another is MIA, gone in a cloud of smoke (POOF!)
just like Mandrake the Magician an hasn't been heard since.

The "Doofus Jammer" was allegedly DF'ed to West Central PA
right in RH's backyard (!) and has been MIA ever since.
Our guess he's either now on Internet NG's someplace
or he is currently incarcerated at either the Torrance
or Mayview State Mental Institution(s) near Pittsburgh.

The "Tarzan Yell" was allegedly a creation of Sir Sidney's.
In fact it was heard either last weekend or the one before
it on 14.310! It was indeed refreshing to hear Tarzan
again after so long a respite... :)

THE PRECEEDING MESSAGE WAS

Actually, your friend's remarks don't surprise me too much, now that I think about it. I actually saw someone on usenet once claim that the 800 was better than the R8B. (I wonder if it was friend?). In any case, no one disputes that there are more knobs to twist and buttons to push on the 800. And no one denies that the 800 has some significant advantages over the 150, like FM and airband. However, as far as shortwave performance is concerned, the 800 is not even competitive with the 150. I've owned two 800s, so I'm not just making this up; and I don't think the 800 is a bad receiver by any means. On the contrary, I think it's a good, if overpriced, receiver. But it's absurd to compare it to a Lowe, a Palstar or something of that ilk. I'm surprised that this is even an issue, but don't take my word for it....if you ever have a chance, compare them for yourself. One thing I will say is that the 800 sounds better than the 150 when both are using their stock speakers. However, the tables quickly turn if external speakers are involved. In that instance, the 150's audio is vastly superior to the 800s.

Sometimes I think that people have a weird since of loyalty to the 800 because it's the last of the royal Grundig line. Not that there's anything wrong with that, but it's not so great when someone else's money is at stake.

Steve

Source record: 10094

I have read that in several ham antenna sites, but mine has been
in use and outside for at least 4 years. Last spring a lightning bolt
took out an Chineese Elm tree about 30' from the "long" wire feeding
it. When the tree fell it took the wire antenna, and our fence, with
it. I
was concerend about the transformer and was mildly shocked to find
it unscathed.
Somewhere I have a link for a "multi-set coupler" that disusses the
commercial and roll your owns and mentions the techniques used by
mincircuits give a "flatter wider bandwidth with less loss". The last
line
is a parphrase of their conclusion. It isn't that we can't wind good
low
loss, wide bandwidth transformers, to me being able to buy one for a
few (my 9:1 cast less then $4 US) dollars will help get the project
done
that much faster. And in a situation where a JFET amplifier is under
consideration, I supect that the FETS will get fried many more times
the the tranformer.

Terry

609. Rush and shortwave

Rush just mentioned being on shortwave a few minutes ago. Kind of an offhand reference to WRNO, which did carry him years ago.

He mentioned maybe looking into being on shortwave again.

He may not realise that he is currently on AFN shortwave for the first hour, but it would be great if he could be on shortwave for the entire 3 hours.

The interesting thing with the RCMP bust was that they'd already gone in with the gear, and these guys were just guarding the place after. The grower, who wasn't home when they raided, came back with a sniper rifle and shot them. They ought to do this US style, just call in the tanks and raze the place next time. They did call them in, but it was after the guys were shot.

Well, this just set back the cause of weed legalization in Canada. Any harsh drug laws the (minority) governing liberals want will surely be supported by the Conservative party, ensuring passage.

I think marijuana and other drug trafficking are major problems now for most countries and the organised crime that is involved knows no limits - this my be biker gangs, Asian, S. American or "traditional" organised crime - whatever. These people must be stomped on. Hard.

Addiction is another issue, and I think this is a medical issue, which should be treated. That said, I really wish courts could offer a choice: go to jail or go to a mandatory locked treatment centre. Especially for kids and teens. Follow-up with spot drug testing and failure means back in the treatment centre lock-up. I want to see addicts forced to deal with the issue via treatment and not just put in jail. They just come out and do that same things again.

I've never said marijuana is harmless and never will. Even though there are efforts to legalise small quantity possession or for use a medication, it is not a medicine or a herb, it is a potent psycho-active drug. For pain, for glaucoma, for nausea related to chemotherapy, it is not a good medicine choice IMHO. If there are chemicals in pot (the so called cannibinoids) that treat these problems, put them into a pill or a asthma like inhaler (which I understand is available in Europe) and remove the THC. God knows I'd rather take an aspirin than eat some aspen tree bark.

I have a 150, but neither use nor feel the need for the keypad. I do recommend an external speaker for the 150, and without an external speaker the 800 sounds better. But the 150 sounds better with external speakers, and it will outperform the 800 and all its buttons and knobs on shortwave every time. I guess it ultimately boils down to what you want.

Hi All,

What are your requirements of a good radio?
What features that you would like to be included in a future radio?
Should this radio be a table-top or a portable?

Degen radio is going to design a good radio, the DE1108 is hoped to
be the best radio ever, second to none that would meet your
requirements!!!

You are welcome to join the Degen DE1108:

http://groups.yahoo.com/group/de1108/

All the latest news about the DE1108 will be posted on this group, also
all your comments and suggestions will be reflected to the enginners
of the Degen radio company.

Cheers,
Paul - HongKongRadioer

You really are worried about Hillary, aren't you? Does Arnold frighten you too? I would take either one over our present guy. Not that they would be my first pick by any means. I was for McCain until he went down the tubes. When he campaigned for bush last year, it kinda soured me on him.

Hello Ducky!

Try an AOR WL500 Window Loop Antenna (about $200.00 from Universal, Grove, or AES) with your '7600. In addition to the antenna, you will need to buy from Radio Shack a BNC-RCA adapter and then an RCA-3.5mm adapter; these will allow you to attach the antenna to the '7600.

You should hear a noticeable difference in reception quality. If you do, and I'm sure you will, then, yes, the Satellit 800 will be "better" than the '7600 (with that antenna). If you don't hear much difference, then forget it. (Buy the antenna on a returnable basis.) The Satellit 800 with its whip is pretty good, but not of DX calibre. It really needs a good external (indoor or outdoor) antenna, and without that, it won't outperform your '7600 sufficiently to justify the purchase, in my opionion.

In my experience, clipping a relatively short wire to the Satellit's whip does little good. The AOR WL500 works very well with the Satellit in my experience, affording a 2 or 3 S-unit increase in signal strength over the whip yet with less noise.

Best,

Joe

P.S. No one ever said ANY hobby was "cheap!"

Message-ID: <4228BDAE.99FBA6A1@eclipsed.com>
Source record: 10165

** U S A. Glenn: We are testing 15190
right now (12:30 pm eastern time [1730
UT] March 4, 2005. Could you please
tune it in and send me a reception
report??
We will run it most of the day using a
new Rhombic antenna with various
programming. We are making RF human
exposure measurements, and testing for
any
signs of meltdowns. Thanks!!! (Dave
Frantz, WWRB, via DXLD)

Dave, Checked around 1745 UT. All I can
get is a very weak carrier, and it is
slightly unstable with BFO on. Now
would that be you or Equatorial Guinea?
I
wouldn`t expect to get a usable signal
from you on 15 MHz under prevailing
conditions, as WWCR 15825 is seldom any
good here -- both are at too close a
skip distance unless some sporadic E kicks in (Glenn to Dave, ibid.)
(GH dxldyahoo group)

Something in there here, but I'm probably in the skip zone as well.

If money is really no object, move (of course, if I lived in NJ, I would move regardless of the listening conditions). A few acres out in the middle of nowhere would be good. Since you probably want to stay where you are, first thing I would suggest is to get the antennas off the roof and as far away from the house as possible. Of course, feed them with coax so the noise from the house doesn't come in on the feedline.

I'm sure he is and if he's happy with his 800, I say more power to him.
I hope he continues to enjoy it for many years to come, in spite of its
crappy build quality.

I haven't tuned them in for a while, but I thought I'd post a reminder that the BBC puts out a twice weekly service called Calling the Falklands which airs on Tuesdays and Fridays at 2130-2145 on 11680 via Rapisham.

Fair Slight Slight Severe disturbance Fair

The show is just asking for people to write to familyradio.com followed
by music.

As a side comment, the Alex Jones show on 9.985 today was greatly
disturbed by propagation, weak signal, and adjacent channel interference.
(9985 being interfered with by 9990). 12160 reception is practically non-
existant.

I suspect that propagation is poor today anyway. Looks promising though.

Disagree

There is no issue -- until recently Morse code testing was an international
requirement.
Requirements are just that whether you like them or not.
(hated hygiene in college - useless course, bit the bullet and got thru it
anyway)
Now Morse it is no longer an international requirement (agreement), the US
FCC will undoubtedly drop it. Standby

We are talking about testing not the use of the Morse code.

I have no doubt what so ever that Morse will be used on the Ham bands
indefinitely by new folks, old folks and just plain folks and you can be
sure - contesters.

A charming mode such as this will refuse to die -- requirement for testing
or no.

The difference between the Morse code and PSK31 is nil -- speed is 30 to 50
WPM in either one.
The difference is a skill set that the anti-code bunch here refuse to buckle
down and learn

During the last county fair, I took a code practice oscillator to our Ham
booth and tapped out Morse code, dozens of kids stopped by and were
fascinated with it. Several wanted to know how to learn the code -- we gave
them handout sheets to get them started. We could not only attract youth to
Amateur Radio, we used Morse code to do it!! How do like them dity dots
hjsjms ???

We now have over 30 school kids enrolled in Ham classes.

What have you done to further the cause of Amateur Radio ????

news:1109908925.885621.59680@o13g2000cwo.googlegroups.com:

The frequency isn't trustworthy, as they have a dedicated group of
jammers that the FCC is, ahem, willing to look the other way concerning.
I have heard the jammers conspire on other frequencies to seek out and
jam the Liberty Net, apparently their apprehension (the jammers) is
beyond the technical prowess of the FCC.

Odd how we live in a country of nitwits willing to uphold the
constitution rights of pornographers and other promulgators of
degeneracy, Howard Stern, South Park, Sex in the City series, endless
"reality" shows, etc., (while willing to accede to the court's
suppressing the right of a graduate to even "mention" the word God during
commencement), but so zealously endeavoring to suppress the rights of
people to discuss their dissatisfaction with the government. Oddly
enough, this is the exact opposite of what the founders had in mind.

HAM VS. SPY (RADIO)

...When a pair of New Mexico hams decided to
trace down some
interference on the 75 meter band, they had
no idea that they may
have been entering a world of spy versus spy.
Or should we say hams
versus spy. Here`s more:

On Wednesday, February 16th, Mike Stark,
WA5OIP and Mike Langner
K5MGR set out to locate some annoying
interference on 3.700 MHz, a
signal that had been on the band since last
December.

The interference manifested itself as a
digital data burst followed
by an audio clip from a Yosemite Sam cartoon. Nope. I am not kidding you. Each transmission ended with the famous line where Sam says:

Actual interfereing audio: (data buss followed by) ``Varmint, I`m agonna blow you to smithereenes...``

The interference came on for just a few seconds at intervals of just under 2 minutes. The fact that Yosemite Sam was loud and clear told the Stark and Langer that the interference was intentional and not simply a transmitter gone bizzerk.

Using Stark`s mobile installation the pair quickly found that the signal grew stronger as they headed West. They then shifted to a Potomac Field Intensity Meter with a shielded loop antenna. Using this gear they located the offending transmitter at the MATIC facility on the Laguna Indian Reservation. MATIC is an acronym for the Mobility Assessment Test and Integration Center. This is a military facility used to develop advanced battlefield communications

systems and not generally known to the public.

The two hams dove up to the building. At no time did they leave the public highway. Langer began taking pictures of the towers, antennas,

and building. Immediately a not-very-friendly guy started walking towards their truck. He was yelling and gesturing for the hams to stop taking pictures and go away. Langer and Stark beat a hasty retreat.

Now here`s the real kicker. The ham radio T-hunters found the interfering transmitter at about 2:30 in the afternoon. The signal went off the air around 5:30 that evening and has not been heard since. Langer suggests that the origin was a contractor`s employee having having a little fun on the radio. Obviously his or her superiors got the message that ham radio operators do not consider interference to their spectrum to be something to enjoy.

For the Amateur Radio Newsline, I`m Evi Simons, reporting.

A few other notes. Langer says that about 5 minutes before he and Stark located the exact source of the interference, a pickup truck had passed
them as they were parked and taking a bearing. He thinks that the driver must have told someone at the facility that they were being hunted. He also expresses his belief that the signal was from some kind of automatic link radio. Also that the data burst was information, and that someone had recorded the Yosemite Sam clip where call letters would normally go.

You can take a look at what the two hams saw on the web site for the project. It`s at
http://www.laguna-industries.com/Lines_of_Business/MATIC_Center/matic_center.html
or at http://www.rdecom.army.mil/rdemagazine/200408/itl_mosaic.html

Source record: 10177

Radio Farda (US propaganda service to Iran) heard with S9+10 signal on 15410 at 1650. Sign off at 1659-abrupt cutoff of music, replaced with DW African service from Rwanda. Passport says the Farda signal on 15410 is from the UK, which is probably why it comes in so well in California. This may be the best time for West Coast USA DXers to hear Farda-apparently it's on this freq from 1400 to 1700, or 6-9am Pacific Time. Noted with Iranian pop music-suprisingly European sounding! Radio is FRG-8800 with 50 foot longwire.

Looks like Sam WAS a government operation after all. But I don't know
why the government put it in the middle of a ham band.

As an aside to this there was also another group looking for the transmitter site at the same time.

I believe they came upon the site after these two left, which may have some bearing on the matter.

I think the two different groups have compared notes after the incident was over.

Well maybe not... read it again! It may have indeed come from a government site, however, it may not have been run by the government itself.

Radio Farda (US propaganda service to Iran) heard with S9+10 signal on 15410 at 1650. Sign off at 1659-abrupt cutoff of music, replaced with DW African service from Rwanda. Passport says the Farda signal on 15410 is from the UK, which is probably why it comes in so well in California. This may be the best time for West Coast USA DXers to hear Farda-apparently it's on this freq from 1400 to 1700, or 6-9am Pacific Time. Noted with Iranian pop music-suprisingly European sounding! Radio is FRG-8800 with 50 foot longwire.

655. Newsreader problems...my apologies

Newsgroup: rec.radio.shortwave
Date: 2005-03-04 22:17:37 UTC
From: running dogg <run@ning.dog>
Message-ID: <4228df6b_2@127.0.0.1>
Source record: 10191

I'm having a problem with my newsreader-it keeps timing out on messages and marking them as unsent when in fact they have been sent. I didn't realize this until just now. That's why my post on Radio Farda appears four times, and my response to dxAce's post on YS appears twice. I apologize for cluttering up the newsgroup with unnecessary posts-this is my computer's (or possibly my news server's) fault.

Who needs that stuff? You can use generic DSP boxes to build modulators
and demodulators. In fact, you can build a complete IF strip with a
combination of software and an inexpensive DSP. Combine that with a front
end of your choice and you have a pretty swanky receiver. Use the same DSP
along with an upconverter stage and an RF amp and you now have a transmitter
too.

Old VCRs and cellphones are an absolute goldmine of nifty RF parts!

Hi there all, and '73

I've been working on an on-line forum for people who enjoy short-wave listening, general recieving, scanning, Ham, police/fire etc. etc.

The forum is not completely ready, but fully functional and updated every day. Complete with a couple of nice skins etc. Feel free to drop in and make a post.

Visit the forum at: www.globallistening.tk

Thanks for your time.

Shaggy, forum Admin.

Wrong.

The problem was that the guy was nuts. He was feared by his
neighbours and disowned by his family, including his father, who have
had next to no contact with him despite living only a few miles away.
He had a number of convictions and had already spent some time in
jail.

That is the VERY FIRST THING I thought of, Terry. Here he's a bitchin'
and a moanin' 'bout the TT, now he's goin' after "Mighty Fine Junk"!

(The TT just can't buy this kinda free publicity! Keep it up, CuHu!
We haven't sold this many IN YEARS! To be honest, it was getting a
little boring assembling these dipoles every day for the hammies.
You've given me a very nice change of pace in the work shop.)

I quit rrs shortly before 9-11. It was taking on the appearence of
rec.radio.amateur.misc. Same people, same crap. But I'll admit this,
the TT threads have gotten some of the trollers and jokesters BACK on
topic: SHORTWAVE!

I have never really understood the concept of killfiles. I mean, when it comes to radio....we seem to want to WALK ON TOP of the other fella when he/she makes you mad. We jam the living crap out of the person or subject we don't care to hear.

A Killfile just sounds like the opposite. Instead of jamming, we're just turning our "receiver" off.

So I'm suppose to be upset when you turn your receiver off and type: <PLONK>????? I could care less! Everybody else is participating but the killfilers!

Another thing: Do you REALLY believe these people killfile all of this fine subject matter in here??? Of course not!! They're here because they WANT to be a part of the madness that is rrs! If they were looking for order and civility....they would go to yahoo-groups....or something even more wishy-washy.....

> too.

LOL .... I'm pi$$ing myself over here... "I fuc*ed up and bought one of
those ..." LOL ... Your a poet, man...

I wonder if the Tiny-Tenna would perform any better then the first home brew
antenna I made when I was in grade school. I took a plastic laundry basket
and covered it with aluminum foil so that it looked like a demented
satellite dish. Then I used a wire to go from the foil to the whip antenna
on this old beat up Zenith SW radio that was collecting dust in the
basement. I bet that my laundry basket antenna was better then the
Tiny-Tenna... LOL... Man... I wish I had a photo of that antenna. It was a
thing of beauty...

Hiya... I dont think there is really any way to isolate what the noise source is... I think there are too many of them.. Houses here are close together and there are power lines all over the place. Noise could pop up for any of a hundred sources. I'm going to try a Wellbrook 330S loop on a rotator. I'll put a mast up on the roof and rig it all up in the spring. It probably will help given that the Wellbrook 330S seems to be known as a very good antenna for noisy areas. I think that may be my best option other then moving out of the area... I hear a lot of good things about Arizona :-)

Thanx again !!!

Michael

Just to alert you: Some folks wanted me to start up another contest.
So tomorrow night, we will! Prize will be, a Tri-Di-Pole antenna.
(Sorry, CuHu...no TinyTenna this time around....)

11:30 PM Eastern: DX Radio School. Although we don't always babble
about DX....and we don't always babble about radio. But just like
school USED to be, we all do learn a little something.

It will be an interesting entry; more to do with AM/FM "oldies" music.
But our show discusses all aspects of radio.

Other topics will be the new Sangean PT-80 and the low power FM
"monopoly" corporation here in Michigan that's buying up all of the
available low power FM available frequencies.

We welcome you to tune in to the ENTIRE techno-block of programming on
Saturday nights: WWCR - 5.070 megs....along with Glen Hauser, George
and Adam, Radio Weather, DX Partyline and more!

73, Bill - WA8MEA
Mr. TinyTenna Fitness America - 1980
(No steroids used....)
TinyTenna, Michigan, USA
(Just west of the University of
TinyTenna - Home of the nations
largest football stadium!)

I think they should design a REAL portatop, something along the lines of the Sony 2010, about the 2010's size but packed with tabletop features. Considering what they've done with the 1102, and how far technology has advanced since the heyday of the 2010, they could make a 2010 size portatop but with the features of the best tabletops, including making it DRM ready, AND putting in FM stereo that covers ALL world FM bands, including Eastern Europe, Japan, and US-that would be about 66-108 Mhz. Hell, they could put in TV sound covering all TV channels in the world. Throw in world weather bands too. Make it able to receive ELF radio signals, down to 10 khz or so. Why not dream big?

There are illegal aliens coming across our borders from Mexico to Arizona and California and New Mexico and Texas and they might steal your Wellbrook antenna and anything else that isn't locked up or nailed down.There are drug wars going on along our Southern borders too.There is lots of wide open areas here in Mississippi.And we have very mild winters here too.My front yard needs mowing already.

One that will pick up Monticello,Mississippi real good from
Jackson,Mississippi (I live in Jackson) with no fading in and out.Y'all
build such a radio as that at a resonable price and I will buy it.And
don't stick a Tiny-Tenna on there either,Tiny-Tennas do NOT work!

I own a weird looking old Zenith antique antenna I bought at the Flowers Fleamarket years ago.(Flowers is ten miles East of Vicksburg,twenty seven miles due West of my doggys couch) It is made of cardboard (or something like that) and it has the Zenith name on it in big letters and lots and lots of fine wire on the outside of it.It is rectangular shaped and taller than it is wide.It isn't for sale,I like my old junk.

You won't laugh when the fire comes roaring down the hill and totally destroys your home, all your belongings, your pets, and possibly you. Want to see what it looked like --- URL: http://www.karlgrobl.com/Photojournalism/Fire/page1.htm

http://www.scrippsranch.org/special/fire_gallery.asp

In California more than 743,000 acres burned by Monday 11/03/03, these hellish fires caused 24 deaths & destroyed more than 3,570 homes. Read that again --- 3,570 homes and 24 deaths.

I had friends die in that fire.

Hundreds were evacuated as the smoke was so bad breathing was difficult all over the county.

The hospitals were loaded with COPD patients.
The smoke also carries metallic particles-- many suffered long after the fires.

The football stadium and red cross shelters was filled with fire refugees.
Amateurs brought food and water to those areas.

Livestock was roasted in their tracks some were rescued by Amateurs.

One couple took the wrong turn and died. Amateur Radio could have told them the right escape route.
Their cellphones were out, the telephone lines were toasted.

Amateurs were a valuable asset heralded by civil authorities and the press.

RACES and ARES was out in full force, a Repeater information net served hundreds who needed information on road closures,
evacuations, shelters, health and welfare and much more.

We are proud to have served.
Hope you are as well prepared as you are stupid.

Having a good time in the middle of a ham band is not advised. That
said, we ARE talking about the US government, which can't stand
independent thought of any kind by anybody.

Bullsh*t. Some here would actually like this to be a shortwave group
again, instead of the political wack-job it's become. This place used to be
an extremely vaulable shortwave resource, especially for beginners. Many of
those whose who provided that expertise have left because of the trash
talking. Killfiling is one way to dump the worst offenders. Unfortunately,
most of them just pop back up under a new IP.

Actually a killfile is used by those who dont want to waste thier mouse
clicks to erase the drivel that needs to be erased in the first place.

Including myself but It's been this way for the majority of it's existance.
There are differances in people Brian and not all of us need a killfile.
Getting upset about it is useless. Theres allway people that we don't like
or agree with and those that just like to stir shit. Be thankful we have
many resorces online to choose for info and this still isn't too bad and it
keeps on living.

New film highlights 1st AD's Iraq mission

By Terry Boyd, Stars and Stripes

European edition, Tuesday, December 14, 2004

BAUMHOLDER, Germany ï¿½ Filmmaker Michael Tucker is perplexed.

The Berlin-based documentary maker asks why America doesnï¿½t seem to care about the Iraq war or the American soldiers who are fighting it.

America, he says, has lost interest in the war and turned the channel to ï¿½Survivorï¿½ and ï¿½American Idol.ï¿½

ï¿½My friends say, ï¿½Youï¿½re obsessed with this war,ï¿½ï¿½ Tucker said in a telephone interview from his Berlin office. ï¿½I say, ï¿½How can you not be?ï¿½ The American people have no idea what life is like for these soldiers.ï¿½

Tucker, a Seattle native, has channeled his obsession into ï¿½Gunner Palace,ï¿½ the first feature-length film about the Iraq war; a film that he says is from the perspective of the soldiers themselves.

Itï¿½s a film that may do for the 1st Armored Divisionï¿½s 2nd Battalion, 3rd Field Artillery Regiment ï¿½ nicknamed ï¿½Gunnersï¿½ ï¿½ what HBOï¿½s ï¿½Band of Brothersï¿½ did for Easy Company of the 101st Airborne Division: Make them into American icons.

The movie is set to open Feb. 11 in six U.S. markets, then expand the following week to 15 markets. Tucker said he hopes to have pre-release screenings next month at major U.S. posts, such as Fort Bragg, N.C., and Fort Drum, N.Y., but those plans are not yet complete.

Tucker spent a total of two months between September 2003 and April 2004 living with the unit at what soldiers call ï¿½Odaiï¿½s Love Shack,ï¿½ a partially bombed-out palace on the Euphrates River where Saddam Husseinï¿½s son, Odai, brought paramours for trysts.

The regiment set up headquarters at the palace complex, which they nicknamed ï¿½Gunnerland,ï¿½ while patrolling Al-Adhamiya, one of the most volatile sections of Baghdad. Tucker accompanied soldiers on countless missions and simply hung out with the troops. He said that left him with a sympathetic view of his soldiers that strongly runs counter to an image colored by soldiersï¿½ abuses of Iraqi captives at Abu Ghraib prison.

ï¿½I tended to give soldiers the benefit of the doubt,ï¿½ he said. ï¿½They didnï¿½t ï¿½sandbagï¿½ detainees (place sandbags over their heads). It

shocked me you didnï¿½t see rougher treatment of detaineesï¿½ given the constant threat level.ï¿½

He did see, over time, mounting frustration among troops over the language barrier, and the fatigue of working nearly around the clock.

ï¿½Itï¿½s a bunch of 20-year-old kids who just want to survive,ï¿½ he said.

Gunnerland was a world between the reality of raids and attacks and the ï¿½realiï¿½ world via the Internet, phones and the media, Tucker said. There were the funny moments, when soldiers would pull up to find suspects conveniently waiting to be caught, and darker moments when the U.S. troops rammed Humvees into houses, only to find out they had the wrong targets, he said.

Tucker said his goal is to show Americans ï¿½ without being voyeuristic, political or patronizing ï¿½ a world that he finds inspiring and terrifying.

He quotes one of the men he calls ï¿½soldier/poets:ï¿½

ï¿½Itï¿½s like (Spc.) Richmond Shaw said ï¿½ ï¿½For yï¿½all this is just a show, but we live in this movie.ï¿½ï¿½

Tucker and his partner, Petra Epperlein, have shown ï¿½Gunner Palaceï¿½ at the Telluride Film Festival in Colorado and the Toronto Film Festival in Canada to enthusiastic reviews.

It is, said Tucker, art out of pain.

It was painful getting to know and respect soldiers and officers such as Sgt. Maj. Eric F. Cooke and 1st Lt. Ben Colgan before they died in separate attacks, he said.

After that, he said, he couldnï¿½t make ï¿½something rah-rah.ï¿½ But neither could he make a film disrespectful of soldiers. Tucker said: ï¿½I most like that it shows them being them.ï¿½

Tucker succeeded in keeping the film ï¿½apolitical,ï¿½ said Jon Powers, 26, a former 2-3 Field Artillery captain, now a schoolteacher in Buffalo, N.Y.

ï¿½Itï¿½s a great movie ï¿½ for soldiers to see, and ï¿½ for their families and friends to see if they want to understand what we went through for 14 months,ï¿½ said Powers, who saw ï¿½Gunner Palaceï¿½ at the Toronto Film Festival in September.

The film is, he said, an accurate depiction of daily life made by a filmmaker given extraordinary access by Lt. Col. Bill Rabena, the battalion commander. Attempts by Stars and Stripes to reach Rabena were unsuccessful.

ï¿½People always ask me if there was censorship; if I had trouble getting access and all those issues,ï¿½ Tucker said.

Instead, he said, he had unrestricted access to soldiers in their off hours, to all missions and even to interrogations of suspected Iraqi insurgents. ï¿½They embraced your being there,ï¿½ Tucker said. ï¿½People just want their story told.ï¿½

Whether the regimentï¿½s soldiers will be able to go to the local base theater to watch themselves on the big screen remains unclear. Army and Air Force Exchange Service executives say thatï¿½s unlikely, unless a major distributor with whom AAFES has a contractural relationship picks up the film, and it goes into wide release, said Judd Anstey, media branch manager at AAFES headquarters in Dallas.

Viewers should be prepared for what Powers calls ï¿½some down-and-dirtyï¿½ footage, including a scene where soldiers are ï¿½playing guitars and basically hanging out,ï¿½ a peaceful moment interrupted by a mortar attack. ï¿½But once (the audience) gets over the shock, it will get a conversation started. ï¿½ The guys who went with me to see it said, ï¿½Is that what it was really like?!ï¿½ ï¿½ I said, ï¿½Yeah.ï¿½ï¿½

(OT, BTW)

reviews here..

http://www.rottentomatoes.com/m/gunner_palace/

& SINCE we're off topic,

2 films..

1:) Sideways.. Funny .. really funny...

2:) Million Dollar Baby..

this film just connected.. Gritty atmosphere..Great Fight Scenes...

She apparantly worked out 4 hours a day for weeks to get in shape for
the film..

Great story.. Morgan Freeman can do no wrong..

- But you might want to just get up & leave before the ending...

Nope. I just remember when I left a couple of years ago, announcing a killfile was the big thing. Then, today, I noticed a new rrs subject mentioning a killfile once again. So this practiced hasn't changed in over two years and it made me curious once again.

Maybe I need to elaborate: What is the deal with MENTIONING the <PLONK> in the first place???? To me, it's nothing more than someone announcing on 14.313 that they're now turning his/her radio off...hah hah...nah nah...take that. And the rest of 14.313 is suppose to be all po'ed at the guy who turned his radio off on them. Makes no sense! So what?

Just looking for some elaboration.....
That is all......

I used to post my "speed logs" all the time... For the most part, there was nothing all too interesting about my speed logs because I was just listing the "big boys"... No surprises.... Ya know ??? So... For now, I only post the odd stuff I come across... Problem is, I cant hardly ID all the odd stuff... I'm always picking up stuff from Central and South America that I cant ID using the lists I have... Especially between 7:00 and 10:00 UTC. Great time to hear all sorts of odd stuff here... Problem is....When I ask for help or info ID'ing a questionable signal, I get some arrogant self important DX JACK-ASS telling me to learn how to use my radio....

Actually, if a signal isn't beamed to my area I consider it to be DX.
Even if it is VOA. I hear a lot of Asian domestic SW from here in
California, and rely on the lists to tell me what I'm listening to
because I can't decipher Chinese much less Laotian (the Radio Free Asia
log I had). I AM disappointed that I can't seem to hear anything from
the Middle East here, considering how "hot" that region is in political
terms. I used to be able to hear morning prayers and Quran readings live
from Saudi Arabia on 15170 after 0300, but not now. I've NEVER heard
Iran in English, which I'd like to (my only log of them is in Farsi). If
you look at my log that I recently posted, you'll see VOA and RN and RA
and the big boys, but you'll also see CNR in Uighur (according to
Passport, where DO they speak Uighur anyway?) and RFA in Laotian (only
heard them in Chinese previously). And you'll see Indonesia and other
Asian countries that you just can't hear on the east coast. (Similarly,
I usually can't hear Africa.) I'd love to listen between 0700 and 1000
but I'm asleep then, it's the middle of the night in California. As for
South America, transmitters change hands often down there and the
station names change too, so don't be surprised if you can't ID
something in Spanish. Fortunately, you can learn some Spanish at your
local community college, which will help you ID these stations.

First, for the conspiracists, look, it's actually 6660 upside down. Very ominous.

Anyway, listening to 9.985 today, I experienced quite a bit of interference from 9.990. Has this station been on the air long? From a cursory search on Google, it seems like it was an Egyptian station, but I didn't spend much time researching it. The time was around 1800 UTC.

Later this evening, I again crossed through 9990, and it sounded like Arabic, the singing the prayers stuff where one could picture a man standing in a tower with a loud speaker addressing scads of kneeling men.

Anyway, this time was about 2230 UTC, and the prayers were being sung, with English translation of each segment following. Being that I am Christian, I didn't linger for very long (lack of interest), but when I again came back to the frequency at 2245 UTC, the station was nothing but a hideous heterodyne sounding whine. Of course, I believed that the station was being jammed (I don't know jack about jamming). Anyway, I listened until 2300 UTC, and the carrier and whining sound dropped entirely.

Apparently, this was being broadcast by the station itself, but why? Foul up, (mistake), technical failure, some other abstruse reason?

Any comments on this issue? Any experience with this station concerning interference. Today wasn't exactly a stellar propagation day, so I don't know if I see this problem again or not.

Dr. Artaud

Also, for the news hounds,
http://reuters.myway.com/article/20050304/2005-03-04T223406Z_01_L04539736_RTRIDST_0_NEWS-IRAQ-DC.html

The 57 year old Italian Female Journalist that was captured and tormented by the Iraqis, filmed writhing in agony asking for the Italian army to leave Iraq as a condition for her release, was finally released by her tormentors.

U.S. forces in Iraq mistakenly opened fire on the convoy taking her to safety, wounding her and killing an Italian secret service agent.

How come this is so predictable?

Well people that anounce the so called PLONK are doing so in hopes of offending or getting back at the person that offended them by posting off topic or whatever? It's like the Na! Na! Na! Na! Na! and stick your tongue out thing some kids did in kindergarten.

I used to hear VOIRI in English regularly. I don't remember the time slot, but I think it was either 6:30 PM EST or 7:30 PM EST. I remember that because that was when I got home from work at night and it was always on. It was about three or four years ago. For what ever reason, if I what I heard was what I thought was what I heard, they switched from English to Spanish for that time slot and I gave up on it. From what I remember, It was a heavy duty propaganda rag.... I'm sure there is some one here that knows the exact time slot I'm talking about and whey they Switched to Spanish and why...

(I betcha he didn't! Just watch.....)

Hey!! Denley!!

You are SO stupid, you invested in a solar powered flashlight company!!

In fact, you are SO stupid....you probably didn't even understand the
above joke!!

Denley is SO stupid, he sold his car for gasoline money!

Denley is SO stupid, he tried to put M&M's in alphabetical order!

Denley is SO stupid, he could trip over a cordless phone!

Denley is SO stupid, he took the Pepsi Challenge...and chose Jif!

Denley is SO stupid, that under "Education" on his job apllication, he
put "Hooked on Phonics."

And finally; Denley is SO stupid....that when he wathces "The Three
Stooges"....he takes notes!!!

Like it or not, many talented members of this hobby have left this NG for good and for one reason: The namecalling, political BS that now passes for conversation on this NG. If that's your favorite sport, there must be hundreds of newsgroups where people rant all day long about everything. Why hijack this group for that purpose?

Look I'm not important, and I can go elsewhere.......but there used to be lots of international goodwill and dialogue here and tremedous help for newbies. Now it's anti-canada, anti-this, anti-everything. The conversation now is about as immature as I have ever seen here. KIllfiling cross-posters and those who never post shortwave is a great way to at least make the conversations seem more civil. (Unfortunately the Lauterbachs of this world keep changing their IP and showing up again 5 minutes later).

9990 is indeed Radio Cairo, broadcasting in several different languages
to Europe at that time, according to Passport. I know you're Canadian,
so depending where you are in Canada this could be a very good logging,
especially considering the poor conditions. According to Passport, this
particular broadcast goes off the air at 2245 or so, so you could have
just heard them powering down their transmitter. Considering that Egypt
is infamous for modulation problems, it doesn't surprise me that
powering down their tx involves a massive heterodyning. Somebody else in
the group mentioned that WWCR's 9985 freq was being interfered with.
I'll have to tune in tomorrow and see if I can hear this station.

Any number of other radio services could have "told them the right
escape route". Back when I was a little kid, in the 1970s, every car
carried an emergency CB radio. This was for communicating to others in
the event of an emergency of any kind, or to be used like cell phones

and FRS walkie talkies are used now. They worked pretty well, but by the mid 80s Emergency CB was dead, primarily because lack of interest in CB after 1980 had lured all the weirdos to the medium, and the bands had become useless. If you want to make the case for amateur radio disseminating info to the public in an emergency, support the SW hobby broadcasting movement. Radios could easily be made that cover any "hobby broadcasting bands". Licensed hobbyists would be able to run emergency info stations at a time like you recount, and people could contact them through any way possible, including through traditional amateur radio, to give them emergency info to broadcast. In everyday life, the hobby broadcasters would be an important info source, sort of like an on air blog. This would break the corporate conglomerate grip on the media. What good is amateur radio if the only thing you're allowed to discuss is CQ's and "my radio is better than yours"?

used to hear VOIRI in English regularly. I don't remember the time
slot,
but I think it was either 6:30 PM EST or 7:30 PM EST. I remember that
because that was when I got home from work at night and it was always
on. It
was about three or four years ago. For what ever reason, if I what I
heard
was what I thought was what I heard, they switched from English to
Spanish
for that time slot and I gave up on it. From what I remember, It was a

heavy duty propaganda rag.... I'm sure there is some one here that
knows
the exact time slot I'm talking about and whey they Switched to Spanish
and
why...

Michael

Michael,

Try listening on 6120 khz at 8:30EST. VOIRI comes on then and
broadcasts in English for about an hour. Their start time can be
irregular, though. Over the last couple of weeks, I've heard them start
ten and even fifteen minutes late. Sometimes the broadcast ends
abruptly as well. Still, they occasionally have a very strong signal on
the East Coast and there's a listenable signal for them on most nights.

I have to agree with that post. Not only is it the stupid contsts, people like Glenn Baxter, etc. It is also groups like the ARRL, who hold back things like getting the code dropped.

I always enjoyed listening to the Liberty Net on 3950. It was always good to listen to fine viewpoints on that net.

I also get a kick out of listening to 14.313 at times. I hear things are picking up, I may just have tune, with my Tiny-Tenna of course!

Hello Ma'am.

Unfortunately it is difficult to combine portability in the sense you mean with good performance. Also I have found that short wave radios do not function well in most workplaces with their fluorescent lights, computers, and other sources of interference. Short wave signals are generally exceedingly weak and modern office equipment is especially electrically noisy.

That said, there are two well-made radios that I would recommend. I own several units of both models so I have a great deal of experience with them.

They are both Sonys - the ICF-SW35, which can be purchased for $90.00 or less (often around $75.00) and the ICF-SW7600GR, which costs about $130.00 - $160.00. These radios are both superior performers within their price range and would offer excellent reception in proper listening venues.

Whether your husband's workplace "qualifies" as a good listening venue is something only you and he can judge.

If you choose to buy one of these Sonys, I strongly recommend that you do NOT buy on eBay. Buy from a reputable dealer who will assist you if there are any problems whatsoever. My first recommendation is Universal Radio, an excellent dealer, though their prices on these two radios are at the high end. A less expensive dealer is J&R Music World in New York. There are also a few Yahoo! dealers which sell these radios at fairly low prices.

My radios are between seven and three years old and the ICF-SW35's, for example, are kept in my cars' glove compartments all year 'round. They are robust - they'd need to be to "survive" in such conditions. Yet, whenever I place their batteries in them, they work flawlessly. My ICF-SW7600GR's are also very well constructed; I feel that this model is the best small portable currently being manufactured.

Both are very easy on batteries; no AC-adaptor is necessary (or desirable). I personally use rechargeable NiMH batteries which make the running costs in the long run exceedingly low.

The major difference between the two are the presence of a synchronous selectable sideband circuit on the '7600 (I know you have no idea what that is, but take my word for it: it is good) and that the '7600 has a keypad for directly entering frequencies which the '35 does not. Unlike some other people however, I do not find the lack of a keypad to be a detriment to the operation of the ICF-SW35. Its image-rejection is

superior to that of the '7600 (this is good, also). Both of these models have many "memories" which allows the owner to "store" a great number of "favored" frequencies.

I believe your husband would be pleased with either and who knows - you may find that you enjoy listening as well!

All my best wishes,

Joe

Dear Billy,

You are turning out to be a real moron. The kill file is just a time saver. 132 articles were posted to the news group just today and most were from the same continually off topic posters. Why take the time to go through them just to see the posts you want to read? With the kill file the computer can be programed to display only the posts you are likely to want to read.

Now you for instance have just show up making a bad impression in several posts being mostly off topic. Shape up or end up in most people's kill file.

Got several strikes against you already:
1. Reintroduced by one of the news groups long time Trolls.
2. Then spams the news group.
3. Then shamelessly further self promotes his business.
4. Several posts with content similar to what is quoted above.

It's your choice as to wether you are worth the time to read and my choice wether or not I'm going to read what you post. I can continue read the news group without reading you if I want.

I don't hold out mush hope for you though based on the Troll-ish stupidity by you quoted in this post.

Time for you to get a clue, if its possible.

I'm watchin' you Billy boy.

757. Don Erickson

Newsgroup: rec.radio.shortwave
Date: 2005-03-05 04:55:19 UTC
From: Tim <rdavisson@neo.rr.com>
Message-ID: <XYaWd.7793$3t3.341@fe2.columbus.rr.com>
Source record: 10294

Longtime AM/FM/shortwave radio DXer Don Erickson of Riverside, California died Monday (3/1/05) in a noon-hour fire that engulfed his home. Firefighters had to break through windows that were boarded up, and found Don's body in the back of his home. A fire department official described the home as one of a "pack rat" with stacks of newspapers and magazines from floor to literally the ceiling.

Don had been a radio hobbyist for decades, and had been very active in various radio clubs. So far, officials have yet to determine the cause of the blaze.

Sad news.

FYI.

Judging from what I have read about the Sony SW7600GR radios,I think I should go ahead and buy myself one of those radios.I have read before both universal-radio and J&R are very good stores to do business with.I think I will check out J&R if they sell the same model radio that universal-radio sells.

Dear Ducky,

It is FAR more sensitive. But remember - sensitivity per se is not the most important attribute of a good short wave radio, at least nowadays, when virtually all short wave radios have sufficient sensitivity. A sensitive receiver will pick up local electrical noise even better than an insensitive one! A radio/antenna combination which will minimize that problem is better than one that won't.

Take my advice about buying the AOR WL500 Window Loop Antenna (on a returnable basis) first and try it with your Sony ICF-SW7600GR. If you see an improvement in reception quality, then the Grundig Satellit 800 will certainly outperform (on an absolute basis) the Sony, due to its far superior image rejection, IF filtering, AGC action, etc.

In order to improve your reception quality, first you must increase the signal-to-noise ratio. Only an antenna can do that. If you find one that will work well in your location (and I believe the WL500 is one that will), then you can upgrade your shack to a better receiver with the knowledge that you are getting your money's worth.

If, after following my advice, you ultimately do buy a Satellit 800, well then you can aspire to someday owning a Wellbrook ALA 330S Active Loop Antenna, the finest antenna being made today. But that will be far into the future.

You should find that the Grundig Satellit 800/AOR WL500 combination will afford you excellent reception and many hours of pleasant listening.

Best,

Joe

Mostly true and I agree on the radio comms

But in several instances, we had info that the TV and radio didn't have.

How -- we had Amateurs on the scene in many instances. Many lived right in the path of the fire and relayed what evac orders were in effect from authorities. RACES was at several locations as well as ARES

As for your last statement: "What good is amateur radio if the only thing you're allowed to discuss
> is CQ's and "my radio is better than yours"?

It is raining here and I being under the weather spent the day inside, playing radio.
Here is the topics discussed today on our repeater.

An F-14 pilot gave us a rundown on landing the beast. We discussed the Academy awards and good movies. We discussed Steve Fossett remarkable feat. A homebrewer gave us the rundown on his 160 meter MOBILE antenna. We chattered about genealogy, the Civil War, Sherlock Holmes, So Cal's record rains, Joe Rudi NK7U the baseball player will have a web cam on during the contest. A Marine vet told us about the Chosin reservoir. An informative round table on cross band repeating. Our antique car restorer came in about his 1956 Chevy. PSK31 and PSK63 were discussed as well as the latest Digipan program. Howard Huges XF-11 was looked up on Google for info. The movie Ray was applauded. Our satellite expert gave us the rundown on the active birds. A plea was entered to support the bill to protect the Ham bands. Some of the TV court cases were discussed, love that Nancy Grace. DVD recorders were talked about. Several computer problems were solved on the air. Digital cameras and photo printers were compared. Some grousing about where our tax money goes. And that is just a few topics we discussed.The Hikers net came on at 2100 and I turned off the radio. Previous week night nets, ARES, Microwave, Sailors, NTS traffic, Off road, Ham help, and Ham Trivia.

And do you know -- not one CQ or radio comparison was heard all day.

Are not you stereo typing just a wee bit ???

What did you talk about today ??

HF Utility logs
9 Feb - 3 Mar
All times UTC, all frequencies in KHZ

3390 - NNN0JQC in USB at 0203 w/ MARS net.

4024 - AAA6AR in USB at 0229 w/ MARS net.

4038.5 - NNN0AOC in USB at 0230 conducting MARS net.

4232 - RFLIE in RTTY 75/850 at 0243 w/ RY test tape.

4271 - CFH, Halifax CG Radio in RTTY 75/850 at 0246 passing coded meteo.

4295 - FUE, French Navy, Brest, in RTTY 75/850 w/ RY test tape.

4369 - WLO in USB at 0258 w/ automated YL/EE voice giving WX.

4780 - CGOOPS, unid ALE stn sounding at 0318. T1Z sounding at 0320. Poss FEMA stns.

5097 - CFH, Halifax CG Radio in RTTY 75/850 at 0334 w/ NAWS tape.

5505 - 'Shannon Volmet' in USB at 0340 repeating ID a few times, then into aero WX.

5547 - Shannon, Ireland ACARS stn at 0402 w/ HF ACARS data.

5547 - 'Evergreen 6307' in USB at 0404 wking San Francisco ATC w/ posn rpt.

5574 - 'San Francisco' wking Delta 571 w/ posn report in USB at 0407.

5875 - OTH radar at 0430.

6438 - FUE in RTTY 150/850 at 0435 w/ RY test tape.

6389 - CTP, Oeiras Naval, Portugal in RTTY 75/850 w/ NAWS tape.

6390 - OTH radar at 0441.

6497 - CFH, Halifax CG Radio in RTTY 75/850 at 0443 w/ coded WX.

6501 - NMN, Portsmouth VA in USB at 1735 w/ live OM passing maritime WX forecast, being interfered w/ by Yosemite Sam station on 6500.

6925 - Scrambled speech in USB at 0000.

6930 - YL/EE Mossad stn rpting SYN2Z58 in USB at 0453.

7520 - Cuban YL/SS 5F msg in AM at 0910.

8983 - 'CAMSPAC Point Reyes' Wking CG1701 in USB at 1953.

9251//12603 - Lincolnshire Poacher YL/EE numbers stn w/ 5F msg in USB at 2241.

9330 - Cuban CW cut # stn w/ 5F msg at 0413.

11175 - Unid OM in USB at 2203 saying "Hey Joe, you down there? You downstairs?" Later asked "Am I getting out now?" Aparently grabbed the wrong microphone.

11175 - 'McClelland' at 1807 passing EAM w/ unid OM saying "No way!" and making rude noises on freq during EAM.

11253 - 'RAF Volmet' in USB at 1601 passing aviation WX for British airbases.

11330 - 'New York' ATC wking unid a/c w/ posn report & selcall check in USB at 1607.

11342 - 'AMC 5229' in USB at 1612 Calling San Francisco, SF advised to QSY to 6640.

12133.5 - AFN feeder from Key West in USB at 1953.

12359 - 'Southbound II,' Herb passing WX to sailing vessels at 2009.

12479/12582 - Unid ship in Sitor-A wking WLO on duplex channel 1206 at 1652.

12664.5 - RFFMEA, Papeete Naval, Tahiti, in RTTY 75/850 at 1911 repeating "non-protege" RY test tape.

12701 - CKN, Esquimalt BC CANFORCE stn passing NAWS CARB tape in RTTY 75/850 at 1700.

13031.2 - RFLIE, Fort de France Naval, Martinique, in RTTY 75/850 at 1932 w/ RY test tape.

13089 - NMN in USB at 1737 w/ maritime WX.

13101 - WLO in USB at 2107 w/ automated YL voice passing maritime WX forecast & tfc list.

13927 - 'Pack 11' in USB at 2050 w/ phone patch to 'Pack Control' through MARS stn.

13993 - AFA4C, MARS stn in USB at 1833 calling Ramstein.

15016 - 'Offutt' in USB at 0002 passing several EAMs.

15034 - 'Trenton Miliary' in USB at 1843 passing volmet.

15082 - Unid ALE stn 711 sounding at 1858. Other stations on freq are NOJ, PTH, STP, and J06.

15867 - OTH radar at 2122.

15920 - Halifax CG radio w/ NAWS tape in RTTY 75/850 at 2129.

16554 - Unid multi-channel digital mode at 2136, also on 12924.

16868 - OTH radar at 2151.

16951.5 - 6WW, Dakar Naval, Senegal, in RTTY 75/850 w/ RY & "Voyez le brick" test tape.

16976 - Unid stn idling in RTTY 75/850, then went off air. Came back up & repeated QRU/ZKM several times before going off the air again.

jenny@aol.com@aol.com wrote in
news:u6ai21ljd54channot0ghfg2g0c71edp0s@4ax.com:

For not much more (perhaps $175) you can get the Sony 7600GR, overall the best radio in this price category. It has Synchronous Detection (many people desire this feature), which can improve reception under some circumstances, Upper Sideband and Lower Sideband (USB and LSB), also desired to listen to some military, aircraft, and ships), great battery life, great looking, and it would be new, so it would be under warranty and you wouldn't need to worry about getting an E-Bay lemon.

I like the following retailer:

http://www.aesham.com/

But here is another: Sony has the ludicrous prohibition against listing prices online, so you may need to call or write the retailer to confirm the price.

http://www.universal-radio.com/catalog/portable/0360.html (Sony 7600GR) ($175?)

http://www.universal-radio.com/catalog/portable/0400.html (Grundig Yacht Boy 400 PE) $130

http://www.universal-radio.com/catalog/portable/3505.html (Sangean ATS-505) $120

I would stick with one of the above. As I said, you can get them new and under warranty for the price that you mentioned. They all have the USB and LSB that I mentioned. (Sideband)

The standing and walking around part may be a problem though, since these are not exactly pocket size. You are not going to get a pocket size radio that performs well enough for shortwave. But these radio are easily portable.

If you visit the web sites above, you should not need any accessories to use the radios listed above, with the exception of the Sony. The description seems to state that it does not come with an AC adapter.

I own a little Radio Shack 150 channel hand held scanner radio I bought for $75.00 at the Eazy Pawn shop in Pearl across the Pearl River from Jackson.The radio works just like brand new.Sometimes I turn it on and listen for a while and I can hear a few Hams talking to each other.There is a Krystal restaurant about a block from me on Highway 80 just outside of Metro Center mall www.metromalljackson.com and I used to listen to the folks at the drive up window.It got to where I can't pick them up on my radio anymore and I wonder why? Did they start useing some sort of spread sprectum two way radios in there or what? [May I take your order,sir?] {two Krystals,two fries,and two cokes} [Thank you sir,please pull around to the window,your order is ready} I enjoyed listening to those folks over there.A few years ago,I used to listen to a few folks phone calls on my road and the next road across from me untill they got them digital spread sprectum (or whatever it's called) phones and them cell phones.I used to hear some real good juicy conversation on their phones with my little scanner radio.

Source record: 10316

Running Dawg not many cars are equipped with CB anymore.
And the range of CB can't be compared to Ham repeaters.

Let me give you a little insight to Amateur Radio Emergency Services
In our county, we have 35 repeaters on 2 meters alone.
Between 440 MHz and 220 MHz there are about 50 more repeaters
Most of these are on mountain tops.

There are probably 5,000 Hams in the county, many familiar with emergency nets and proper procedures. And many have HF capability on 10 bands. This gives us communications to all over the world. Don't tell me about the internet - it will fall apart when a national disaster hits. Ask the guys in Florida about that one. Cell phones were kaput also.

In our club alone we have 4 repeaters on a 5600 foot mountain.
They cover 2000 square miles of the county very reliably even to 1 Watt HT's.

During the early part of the Calif fires, the repeaters operated on commercial power. The fire swept up the Mountain and toasted the power lines. The repeaters went on battery power for several hours, then started to die. A crew went up the mountain, put gas generators in place and a mountain resident refueled them periodically as required. All of our repeaters were on the air for the full period of the fires 24 hours a day for about 4 days.

On one repeater alone -- 300 Hams checked in, over 1000 messages were passed.

This is a lot of communication power and has been invaluable during earthquakes, fires, and other disasters. RACES assists civil entities with supplemental communications and ARES works with the Red Cross. They were extensively used during the Calif fires.

Now this is just one county. Extrapolate that to all 50 states with 675,000 licensed Amateur Radio Operators.

If you want to know what Hams did during the hurricanes or 9/11,
use Google.

Walter Cronkite stated "Amateur Radio is probably the only fail-safe communications system in the world"

I agree as I charge my deep cycle batteries.

DX Ace,
.
Rush Limbaugh has a $250M Contract with Clear Channel Premiere through
2009.
(About $30M per year)
http://www.clearchannel.com/radio/
http://www.premiereradio.com/
.
If his Contract does not prevent him from Airing his regular daily
Talk Radio Show on Shortwave Radio; he could easily put a simulcast
or rebroadcast of his daily Talk Radio Show on Shortwave Radio.
.
The key for him would be if he could charge (bill) the existing
Advertisers for the "Additional" Shortwave Radio Air Time and the
'extra' {expanded} World Wide Shortwave Radio Audience.
.
Or - If he could have a 'separate' group of Advertisers Targeted for
the World Wide Shortwave Radio Audience. (It's About The Money)
.
Hey Rush Limbaugh could be a Trend Setter with other current Talk
Radio Personalities following with their own Shortwave Radio Shows.
.
Another thought would be that Clear Channel could get into the
Shortwave Radio Business and put a select number of their current
under-contract Talk Radio Personalities and 'others' on their own
Shortwave Radio Stations and Transmitters.
(From Deep-in-the-Heart of Texas, USA.)
? If Clear Chaneel got into Shortwave Radio would others follow ?
.
Yes - Rush Limbaugh could be on Shortwave Radio
and Heard 24/7 Around the World
.
guess i will just keep on dreaming ~ RHF
.
.

Part of an old commercial I used to hear on the radio many years ago about Tennessee Pride sausage.The name on the package is Tennessee Pride! Well,the name on some radios (Drake,Ten-Tec,Palstar,and there is another one too,but I forget which one it is just now) means something to me and metinks I also like Sony,Sony 7600GR.

That would be the final nail in the HF broadcasting coffin. Look,
unless you're in the middle of nowhere there are much better ways to
get the variety of programming once exclusive to HFBC. It's the 21st
Century people.

Next week's topic on "DX Radio School" will be solely devoted to this fine newsgroup.

We are going to talk about its humble beginnings, some of the fun characters over the years and how the audience can join in on the action of rrs.

Been thinking about introducing a free handout on how the listener can access rrs through Google.

Sounds like fun! We'll get some fresh, new faces in here....and brighten things up in ole' rec.radio.shortwave!

827. Lost Power, Ground Worked

Newsgroup: rec.radio.shortwave
Date: 2005-03-05 15:30:22 UTC
From: Burr <pitz2@verizon.net>
Message-ID: <igkWd.60387$uc.18748@trnddc08>
Source record: 10362

Lighting tore us up yesterday afternoon, most of the south part of town was with out power a few hours and I was out 12 hours.

I took a hit on my transformer on the pole, blew it apart. Nothing happened to my radios or computers. I have my computers on a UPS so I had lots of time to shut down gracefully. My radios run on large 12v batteries so they came out ok, my antennas are grounded and one coil did drop and I had to replace it this morning.

So it worked. Who would have thought that "I" would get hit out of all the houses and antennas around here. I went through the motions of grounding but thinking I would never need it. I use UPS's on my computers, TV and CD players because of "brown outs". I run my radios on 12v batteries to get away from the AC hum and normally recharge when I go to bed.

At the time I got hit I had two PC laptops going and one "Big Mac", the Sat 800 and the BC 895. I ran the radios from 5:30am until I went to bed, I have two of the biggest batteries that Cosco has, I replaced the D50's that I used for years and used the Cosco batteries because of price.

When the power came on about 4am I got up and checked to be sure everything was charging then went back to bed. Something to remember, UPS's are only good for 2 years. I sell a UPS with every system I install and I always push for them to change them out in two years. I have also found it is good to "work" the batteries, I pull the ones down in my motor home every few months, I "recharge" my car batteries every few months to keep them toped off, alternators do not top batteries off, they only replace what is used, """Maybe"""!!!!

OK, here's my report on the power outages. Pick it apart if you want but it works.

Mongolloyd is a welsh jew!
http://www.houseofnames.com/coatofarms_details.asp?sId=&s=Davies

Origin Displayed: Welsh

Origins Available: Welsh, Jewish

Spelling variations include: Davies, Davis, Divis and others.
First found in Flint, where the Davies family was seated from very
ancient times, some say well before the Norman Conquest and the arrival
of Duke William at Hastings in 1066 A.D.

Some of the first settlers of this name or some of its variants were:
Arthur Davies and Dorothy Davies, who both settled in Virginia in 1623;
as did Christopher and Emanuel Davies in 1635; Daniell Davies, who came
to the Barbados in 1635.

Isn't it ironic, given the anti-Jewish things he's posted?

That is just dumb. This has nothing to do with the character or personal characteristics of the soldiers, likely more to do with procedures and compliance with a roadblock. Perhaps also confusion on the part of the driver of the car. Most soldiers are simply trying to do difficult tasks under dangerous circumstances. Let's wait for the investigation to show what happened.

This may also be a problem with the "Noworyta News Reader/2.9" that you are using. It may not interact very well with your ISP's news server. This is not a commonly used application and may have support problems. I certainly understand the wish to not use Micro$oft program though. (Computers really don't need Gates or Window$ IMHO).

Yes, this came out after. Obviously not enough time in jail. They couldn't make charges stick except once on this guy for sexual assault. Many charges though. I heard the interviews with his brother and father, both who used the word "psychopath".

I think the soldiers were just jumpy. The road to Baghdad Airport is
supposed to be the most dangerous road in all of Iraq.

This newsreader is the only online newsreader I could find at the time I
bought my computer (2002) and it was free, so what do you expect. Every
so often I can't access my server AT ALL, one time it wouldn't access it
for three days. Most newsreaders are "offline" which means they download
everything on the group and cache it on your computer, and never purge
the old articles so you end up looking at old articles all the time. I
don't like that. So this newsreader was the only online one I could find
on Tucows.

in a world of greedy companies pawning off cheap trash as a method to extract your hard earned money while giving the very least possible in return..... i HAVE been very happy with my sangean ats606 radio. its small, good on batteries and will take a beating. it also runs circles around all my other radios when using the whip. its not cheap but its within your price range. for a little more money you can get a little more radio with the sony 7600gr. its a little more serious radio with single side band and synch lock. if your husband doesnt know what those things are, then he isnt ready for them yet and probably would be better served with the simpler radio. there are a butt-load of cheap junk radios out there so do your research before you decide. its not that a cheap radio cant be fun, but you dont want to pay too much for it.

A few points to make about Iran/Persia.

Persians (historically correct, "Iranian" is a 20th century phenomenon) are notorious deceivers. The are very good at originating propaganda and conspiracies.

With that said is it any wonder that the monies spent to spread Islamic propaganda has far exceeded all that which was spend by all nations during the cold war!? That is a fact.

Furthermore, with the advent of the internet and reading the titles of these TV clips, it should be no surprise about where these anti-Bush and left-wing socialist conspiracies theories originate from.

Propaganda in this day and age can be far more effective than just a decade or two ago. This the Persians are well aware of but left-wing socuialist have a hard time realizing.

Think about that.

Source record: 10422

"Racist" is one of those made-up smear words designed to stop
debate. See

http://www.nationalvanguard.org/story.php?id=4523

for further information on the origin of the word.

But to address the original question:

If we define the word to mean a person who believes that there are
socially significant and ineradicable differences between the human
races, and that our society ought to take these differences into
account when making public policy, and that our society ought to
have the survival and integrity of its founding race as a primary
and indisputable value, then virtually all of the founding fathers
of the United States of America -- Thomas Jefferson, James Madison,
George Washington, James Monroe, most members of the original
Congress, Francis Scott Key, and hundreds more, even including
Abraham Lincoln -- would have to be included under the term.

Another worthwhile article on the subject is:

http://www.nationalvanguard.org/story.php?id=4524

And there is a shortwave connection: This week I interview the
Director of the Institute for Historical Review on my radio program
on this and other topics, and the main subject is a man known by
many here for his own shortwave radio broadcasts: Ernst Zundel. See

http://nationalvanguard.org/story.php?id=4676

for further details.

With all good wishes,

Really? It _isn't_ free speech?

What other historical opinions should I be locked up for holding?

If I publish a dissident view on WWI, or the Salem witch trials,
should I also be jailed because I am trying to "rewrite history"?

Should historians who rock the boat with new theories or ideas be
locked up, too?

Are we _absolutely sure_ that the court historians of today are
right on everything, and infallibly so? Are their opinions so holy
that they deserve to be "protected" by imprisoning those who differ?

See:

http://www.nationalvanguard.org/story.php?id=4669

and

http://www.nationalvanguard.org/story.php?id=4667

By the way, Mr. Zundel's radio program was not _American Dissident
Voices_. That's my show, which first went on the air in 1991. I

believe Mr. Zundel's show was called _The Voice of Freedom_.

With every good wish,

False. This was never even alleged.

[...]
> In case you were not aware of it, Ernst Zundel
> is a GERMAN CITIZEN. He is not a Canadian
> Citizen. He fled to Canada on a visa about a week
> before he was to be picked up by the German
> Authorities on Political Incitement charges.

Again, completely false. He was kidnapped on false charges by
jackbooted goons in the U.S., and shipped to Canada without trial
and without his consent. His trial in Canada was in secret and he
was not allowed to confront witnesses or even see the secret
evidence against him.

[...]

Also false. The judge in question had actually ruled _in favor_ of
the pro-White church in question. See this piece by prominent
attorney Edgar Steele:

If you don't understand killfiles then you've never been on the receiving end of consistent insults and trolls. There are people who post in this NG who basically ONLY insult others personally or insult their country. They post aggressively whatever the topic may be. They alienate and annoy many of us. These people don't respond to polite suggestions about their manner of posting, and they often continue to post and post again in the same topic threads until they finally generate a response. A killfile in this sort of situation is like telling someone to stop bothering you. Like finding an "off switch". Justified and necessary, unfortunately. There is more than enough data to suggest psychological pathology and plain mean spiritedness for a number of these persons.

To slightly correct you, a killfile is like filtering out static. Makes the reading so much more pleasant

I hope your ready to pay increasing taxes,

Sure you fucks would pay increased taxes to bomb the fuck out of "ragheads" but you wouldn't lift a finger to help your fellow man in this country.

It's easy to say "bomb the ragheads" when you are letting others do it for you, and others are dying for you. Why don't you go on the front lines lazy asses?

I had one of those 'expensive' TenTec receivers for around a month. Sent it packing, back to its birthplace.

Way to much money for very little increase in performance vis a vis the Drakes.

I've done all right with my current line-up.

Then why do the several dozen hams/swls at eham.net give it a 4.1 out of 5???? Are they all doing a Lewinski on Bob Crane??

No! Your beef is that it doesn't work well with the whip. Sangean PURPOSELY did not put a preamp circuit in with the ship as other units, BECAUSE they didn't want overload problems like the other units! I have a Sony 7600. It has overload problems with an external antenna. But....it is the best receiver when running off the whip because of the amplification.

The whip on the 909 is nothing more than a decoration. Put an antenna on the 909 and you've got a GREAT portable DX machine....

No one's calling you stupid ... at least not me ... for I find myself in exactly the same financial situation you are in.
And I have a master's degree in electrical engineering (which drew me to your posting and the replies on the TinyTenna), a 163 I.Q., and a published book ... all of which, as Chuck Harder might say, would together with a dollar would buy you a cup of coffee at McDonalds ... which is just about as good as a $1.62 cup o' joe at Starbucks or Caribou.
Speaking of stupid, though, I really wonder about Chuck Harder. I listen to him talk on the radio about abstract stuff like politics, economics, social issues, history, religion, and related topics, and it just doesn't come out quite right.
For example, take economics - specifically, inflation.
Chuck Harder understands that we've had a lot of inflation since 1964 ... he goes on and on about the wondrous prices we paid for basic necessities back then, then compares these to what we're shelling out today.
But as Chuck tells it, all this inflation happened yesterday, not over the past 40 years. Why, I was just recently paying 29 cents for a loaf of bread, Chuck intones on his show, and yesterday I went to the local Wal-Mart and the exact same loaf was $1.49. How terrible! No wonder our dollar is in the crapper viz. the Euro!
Huh?
When was the last time anyone under 45 could remember paying 29 cents for a loaf of bread?
I'm 46, and I certainly can't.
Chuck seems to have a problem with temporal cognition, a fancy-schamntzy term for difficulty in telling time over very long periods - a characteristic of adolescent brain development. If true, this would imply that Chuck has an adolescent intellect - or in crude, politically-incorrect parlance, is a numbskull, a lamebrain, an imbecile, or a moron.
(You can tell I'm a Three Stooges fan ... I voted for W. too ... oh, how so Red Nation!)

Having been in just exactly that kind of job,
I can tell you without question that this is utter bullshit.
No way a contract employee is going to be doing this for
as long as it went on without oversight, not to mention
making toast of his job and going to *jail* for misappropriation
of government equipment; that just did not happen.
This is a B.S. cover story, regardless of what AceHole thinks.

I've kept my RX340. Sometime it does better then the Drake R8B and
sometimes it doesn't. They are both terrific radios with their own
characteristics. The difference between them performance is not much so
I can understand your assessment.

'tards are people that just don't get with the program, any program,
independent of what radio they happen to own.

955. Lowe HF-150 carrier insertion point

Newsgroup: rec.radio.shortwave
Date: 2005-03-05 20:22:20 UTC
From: Pete KE9OA <p.gianako@worldnet.att.net>
Message-ID: <0yoWd.104695$Th1.19250@bgtnsc04-news.ops.worldnet.att.net>
Source record: 10492

Does anybody know how to adjust the BFO carrier insertion point on this receiver? This one is skewed off to one direction. As an example, LSB comes in fine when the USB mode is selected, but if I select LSB, the BFO carrier is almost out of the I.F. passband. I did readjust the reference oscillator for the microprossor as was suggested, but to no avail.
The schematic shows an adjustment for the HET oscillator, but I don't think this is the one I need to adjust since this oscillator operates at 14.8483MHz.
The tuning appears to be on frequency.....when I inject a .1uV signal at the antenna input with a synthesized signal generator, the carrier centers at the displayed frequency.
Does anybody have any ideas?

Pete

Since Teamon has "PLONKED" me, let me preach to the others in the choir...and point out his warped sense of logic:

>> First off, I didn't start the troll.

>Yeah but you are benefiting from it.

Ooooooooooooooh!!! What a HORRIBLE sin!!! Last I checked, this WAS America! And I think we have some form of capitalist government here.

>> Second, I'm not keeping the subject alive....it's your redneck buddy in Mississippi.

>You are the majority poster to the thread if you haven't noticed.

You are wrong. I'm looking at the thread right now and it's the Mississippi Moron that has the majority. Your killfile is warping your process of reasoning.

>> And thirdly, I am not spamming. I have introduced subjects AWAY from the TT.

>Yes you are Billy. Starting with the TT and then your other products you don't make money on. That's one of your jokes right? Then mention the show you sponsor.

Which ALL pertain to SHORTWAVE. If I were you, I'd change your warped value system and go after the REAL spammers in this group: the political BS. But you are so hateful of this capitalist system we have in the U.S., you will do anything to harm it. I know your kind.

>>Yeah, hell no that's not spamming Ha, Ha, Ha.

No it's not. Here's the CORRECT definition from spam.abuse.com:

**There are two main types of spam, and they have different effects on Internet users. Cancellable Usenet spam is a single message sent to 20 or more Usenet newsgroups. (Through long experience, Usenet users have found that any message posted to so many newsgroups is often not relevant to most or all of them.) Usenet spam is aimed at "lurkers", people who read newsgroups but rarely or never post and give their address away. Usenet spam robs users of the utility of the newsgroups by overwhelming them with a barrage of advertising or other irrelevant posts. Furthermore, Usenet spam subverts the ability of system administrators and owners to manage the topics they accept on their systems.

In a court of law, you know my postings would not be considered spam.

>> (If you have noticed, I have quit using my usual signature line
mentioning my website....WHICH IS PERMISSABLE USENET ETIQUETTE
ANYWAY......in favor of humorous TT liners.)

>Your derogatory sense of humor is not appreciated.

Says who? I'm certainly not going by your screwy opinion of things!

>I didn't complain about your sig. The content of your posts are the
problem.

Which, again, is about K I L L F I L E S. Get a REAL life, you poor,
rejected, useless eater....

>> You can take your clue, and cut and paste it where from your
speaketh:
out of your colon hole......

>There is a good example of something no one wants to read but you
think
it's "humor."

I would MUCH rather see witty remarks such as this, than the F U, S U &
SH--, and other crap I'm seeing in here....and for some odd reason, you
don't object to becuase you have a fetish on me and the TT....

>> Now....go out and enjoy the day.....

I don't need your approval. What I will do is continue to read the
newsgroup without you.

I don't care if founded the news group. He is a trolling, spamming, foul
mouthed idiot. Moron thinks everyone should just accept the way he
thinks or views his activities. Not ... a ... chance of that happening.

He is in the kill file because I'm not wasting my time reading him and
that's it.

You were luck. It's always best to disconnect any long wires from
equipment during electrical storms. I've seen the backs of TV sets
blown off.

Rely on the Varactors and gas dealies as insurance for when a storm
hits and you're not home. Otherwise, unplug and ground.

Source record: 10560

Hasn't been that great for me today. I noticed that the solar wind magnetic field direction is opposing the earths magnetic field. This is never a good thing for propagation.

<http://www.sec.noaa.gov/SWN/index.html>

Radio Netherlands was comparatively weak and noisy today out of the Antilles instead of being very strong and sounding like a local station.

Only 17,725 from the Antilles was strong where 17,810 and 15,315 were weak. 17,875 from the Sackville was very strong as usual.

Australia and NZ have not faired very well so far today with 17,675 for NZ being the best so far today.

In about half hour I'll see how RA does on 21,740 22:00 to 0:00 UTC.

Transcript From RushLimbaugh.com:

http://www.rushlimbaugh.com/home/daily/site_030405/content/eib_love_line.guest.html

CALLER: We do appreciate you and the only thing we regret is it's very hard to pick you up out on the water but as we are members of the 24/7, we will be able to catch up on that when we get back.

RUSH: Well, thanks very much. You know, we used to have a shortwave affiliate out there in New Orleans. There was a shortwave affiliate in New Orleans. You remember that, Brian? That was before you were born. We had a shortwave affiliate out there, and I don't know what happened to these guys, maybe terrorists blew them up or what have you, but that was cool because you could broadcast during the day. You could hear this program on the cruise ship, for instance, if you took a little shortwave radio. We ought to look back into that and try to revive that, so it would help guys like this going out on their anniversaries on cruises and so forth, in remote parts, parts unknown, that don't have EIB affiliates.

news:4229EAB4.8020707@library.flawlesslogic.com:

> http://tinyurl.com/4sw29

Actually: http://nationalvanguard.org/story.php?id=4678

After you people have looked at this page, if you decide to do such, read the following article on Propaganda. Compare the way the images are presented with the images available at:

http://en.wikipedia.org/wiki/Propaganda

It's all propaganda, virtually everything we hear. Though the above page (http://tinyurl.com/4sw29) will no doubt be perceived as propaganda by many (it actually is in the context of the Propaganda article), we miss that fact that most of what we are exposed to in the media is also propaganda.

Actually read the article, (on Propaganda), and see how widespread it is. Advertisers, lobbyists, politicians, the government itself, is constantly engaged in propaganda.

Compare the image in the http://tinyurl.com/4sw29 (I Love my Family, I Love my race), on the left side of the page, with the image on the Propaganda article page "An ADL poster uses a young Chinese boy to argue that anti-Semitism hurts non-Jews." (also on the left side of the page).

Look at the images throughout the page http://tinyurl.com/4sw29 and the images throughout the Propaganda article page. Strikingly similar in appeal.

Concerning everyday propaganda, a while ago I researched the statistics for crime committed against blacks by whites.

Look here for the statistics,
http://www.ojp.usdoj.gov/bjs/homicide/race.htm

The web site is the U.S. Department of Justice, Office of Justice Programs. It can be clearly seen that the black on white crime exceeds the white on black crime:

"Blacks were 7 times more likely than whites to commit homicide in 2002 "

Blacks are more likely to kill whites than whites to kill blacks. But the charts do not go far enough in stressing that blacks represent a substantially smaller section of the overall population, only 15% nationwide. So 15% of the population commits nearly 65% of the violent

crime in this country. A staggering statistic.

YET, from watching TV and listening to focused news stories, one would have the belief that the statistics were the other way around.

"Fifty percent of the murder arrestees during 2002 were black, and 47.7 percent of arrestees were white".
http://www.fbi.gov/ucr/cius_02/html/web/offreported/02-nviolent02.html

The above figure states 50% of the murder arrestees being black is to be contrasted against the fact that they only represent 15% of the population, and concerning violent crime the statistic only relates to murder, not including armed robbery, rape, etc. This takes the total of violent crimes committed by 15% of the population to the 65% level that it is.

Bottom line is propaganda, we are constantly told how evil white people are, and that they commit a great deal of hate crimes against blacks. It couldn't be further from the truth. Case in point:
http://www.newsmax.com/archives/articles/2002/10/14/174304.shtml

""When a white commits a murder against a black, it's national headlines. But when two blacks force their way into an apartment, rape two white women and take them and their three white male friends and murder them in cold blood, it's not even worth a national news story," said he in a recent column."

"Akbar Shabazz of the black conservative group Project 21 is not surprised that the trial is receiving minimal coverage."

"The cases are very rare when you do have black-on-white hate crime prosecutions. But I don't see the hate crimes angle. I feel that these are some brutal guys who definitely deserve the death penalty, but I didn't think that they took them and killed them strictly because they were white," Shabazz said."

They killed 4 white youths, the 5th, a woman, escaped after being raped, shot, and ran over by a pickup truck and left naked in a country field in the middle of winter, and Akbar Shabazz doesn't feel that this was a "Hate" crime. You have got to be fucking kidding me. He feels that this was just part of a routine holdup and the race of the victims played no part. Raping women is part of a routine holdup.

Everyday Propaganda (that blacks are suffering disproportionately from violence committed by whites), simple as that. It's unfortunate that in today's supposedly open society, that one would need to spend hours looking for the statistics, they should be easily available.

Soliloquy

980. Utility Informs Ham Radio Club of Preliminary BPL Plans

Newsgroup: rec.radio.shortwave
Date: 2005-03-05 22:04:08 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <d0dacoick1@sparta.btinternet.com>
Source record: 10568

Staff members of San Diego Gas & Electric Company (SDG&E) in California announced during a February 23 presentation to the San Diego DX Club that the utility plans to deploy multiple broadband over power line (BPL) test sites in San Diego County. Locations for the BPL pilot projects have not yet been specified. Several BPL equipment vendors are expected to be involved in the trials, each with its own test area and frequency plan, and the first system could be in place as early as this June, with others following soon after.

The SDG&E staffers said they were unimpressed by early BPL equipment, but were encouraged by a December visit to the Cinergy BPL system in Cincinnati--said to pass some 50,000 homes reportedly without generating any interference complaints so far. Cinergy has partnered with Current Technologies in its BPL venture.

ARRL Lab Manager Ed Hare, W1RFI, says that while Current Technologies' BPL equipment does reduce emissions in most spectrum used by Amateur Radio, it operates at full strength on other HF spectrum--such as the international shortwave broadcast bands--and it uses low-VHF on medium voltage lines.

"The Current Technologies' BPL HF emissions are from the 120/240 V wiring only, so it is not likely that the signals will propagate along a line as well as systems that put HF signals directly onto overhead medium-voltage distribution lines," Hare said. But he added that even with the best "notching" techniques, interference is still possible from a nearby BPL system.

"ARRL's concern is that if the degree of protection this BPL equipment provides proves inadequate for such circumstances and interference occurs, there are no additional solutions to apply," Hare said.

RA starting out very weak on 21,740 22:00 UTC. Time will tell will if
the signal picks up a bit throughout the broadcast segment.

This is normally a very good signal to southern California.

Who ever said it was 'government equipment'? The place where the transmitter was found was a private company as far as I am aware of, and located on a Native American reservation.

I think he's assuming it's gov't equipment because of this quote:

"Using this gear they located the offending transmitter at the MATIC
facility on the Laguna Indian Reservation. MATIC is an acronym for the
Mobility Assessment Test and Integration Center. This is a military facility
used to develop advanced battlefield communications...."

I assumed it was a government facility as well, until I researched it and
learned that MATIC is owned by the Indians, and not just on land leased by
the gov't, etc.

FlowerinThWater@webtv.net wrote in news:15999-42295EC9-646@storefull-3253.bay.webtv.net:

I read an article the other day of a couple (man/woman thing, you know, a couple), that had been fined and threatened with equipment confiscation since they weren't complying with FCC regulations. The couple's equipment consisted of a battery charger or two for the charging of the couple's electric scooters. You see, the couple did not have an FCC License, they possessed no equipment requiring them to posses a license, yet they have been fined and have been threatened with equipment confiscation since their equipment is causing RFI.

Can you learn to press buttons on Handie Talkies (HT), Walkie Talkies, Base Stations, to turn knobs, enter frequencies with the keypad, etc. Sure. Can you learn to do it legally? Therein lies the rub.

http://www.arrl.org/news/stories/2005/01/06/2/?nc=1

Modern people think that simple operation of equipment is all that is required for them to be a professional. But to be a good HAM, you need to understand much more (I'm not saying that I am a good HAM).

I also have an interest in telescopes. Years ago, anyone with any pride labored to grind and figure the mirror for their telescopes, assembling the entire unit, understanding something about optics in the process. They went outside, learned the sky, found the objects of their desire, and observed them. Today, you open the box, remove the wrapper, put in the batteries, enter the coordinates from a chart, and viola!, the scope slews to the desired star. In return they know little of the optics and even less of the sky. Yet that call themselves amateur astronomers. I realize that the cost is low enough for most people to buy decent telescopes today, something that wasn't the case years ago, therefore they built them, but they still learned about them in the process.

You see, we don't have the time to do the work building them, nor learning the sky, we have such busy lives. But subtract the amount of time that we spend perusing porn on the internet and watching endless hours of televised movies, reality shows, and sports, and I think that you would see that we do indeed have the time, but we waste it on superficial things, things that in the long run produce no edification.

Aye, you can learn the fundamentals, but can you do it legally, effectively, can you diagnose problems when they occur, or will you simply throw out the item and buy another. Will you simply add a bigger AMP (like the CB linear AMPs), or will you cunningly design your antenna system so that you get the performance that you want with less power and

therefore less liklihood that you would produce interference.

Soliloquy.

>
They were, comparable to the norm for me, very weak at S1 levels. Now at
22:49 they are averaging S3 and hitting S4 on the peaks. Listen-able but
somewhat noisy. I can over the bookshelf speaker understand all that is
being said. Often the signal level is over S6 in the bad times and more
like S10 in the good. This is on a horizontal loop, which this time of
day is not optimal. I expect the signal level to continue to improve
over the broadcast because it usually does.

I write about the US because Canada really sucks. I don't like the US
military because they don't let gays enlist. Other than that the US
really rules. I would bend over frontwards and take it up the butt
from an US citizen if I could.

Nothing important ever happens here in Canada. I wrote the following
song though. I hope you like it. It did not take long to pen. It does
not have much substance. It's actually pretty stupid, but I like it
anyway.

O Canada!
Our home and native land!
True patriot love in all thy sons command.

With glowing hearts we see thee rise,
The True North strong and free!

From far and wide,
O Canada, we stand on guard for thee.

God keep our land glorious and free!
O Canada, we stand on guard for thee.

O Canada, we stand on guard for

I'm in California, and I used to be able to pick up several Middle
Eastern stations regularly. But now I can't. Maybe the sun is affecting
the atmosphere so that US west coast IS in the skip zone, and this will
continue for the next couple years or so. I tried listening for the
Radio Cairo broadcast on 9990 that Artaud said was strong enough to
interfere with WWCR on 9985, but heard no sign of it. I heard WWCR, and
WWV, but not Radio Cairo. In another post you noted that propagation was
poor today, so that probably has something to do with it.

Between MW/FM, the internets, Worldspace, Sirius and XM, there aren't that many ''unreachable'' people left. Certainly not enough for most countries to justify the expense of maintaining a fleet of 250 kW transmitters around the world.

1007. OT: Russia Moved Iraqi WMD to Syria and Lebanon - Why Syria Won't Withdraw - Iran Oil Threat

Newsgroup: rec.radio.shortwave
Date: 2005-03-06 00:01:41 UTC
From: Li Changchun <LiChangchun@ccp.gov.cn>
Message-ID: <112ki4iqojpfkf7@corp.supernews.com>
Source record: 10595

According to a former top Bush administration official, Russian special forces teams moved weapons of mass destruction out of Iraq to Syria.

"I am absolutely sure that Russian Spetsnatz units moved WMD out of Iraq before the war," stated John Shaw, the former deputy undersecretary for international technology security.
...
According to Shaw, Russian units hid Saddam's arsenal inside Syria and in Lebanon's Bekka valley.

"While in Iraq I uncovered detailed information that Spetsnatz units shredded records and moved all WMD and specified advanced munitions out of Iraq to Syria and Lebanon," stated Shaw during an exclusive interview.
...
Lebanon and Syria

The arming of Iraq with such weapons has a direct impact on events today in the Middle East. The presence of former Iraqi WMD systems in Lebanon raises serious questions surrounding the Feb. 14 assassination of former Prime Minister Rafik Hariri. Many blame Syria for Hariri's murder.

However, the possibility that Hariri discovered the location of the Iraqi WMD systems inside his country lends some credible backing to a Syrian assassination effort to silence him.
...
http://www.newsmax.com/archives/articles/2005/3/2/230625.shtml

WHICH PROBABLY EXPLAINS THIS...

Syria Ignores Demand for Full Withdrawal

President Bashar Assad on Saturday ignored the Bush administration's demand that he completely withdraw Syria's 15,000 troops from Lebanon by May, announcing a two-step pullback to the Lebanese border and negotiations with Beirut on a full pullout.

Beka Region

"We will withdraw our forces stationed in Lebanon fully to the Bekaa region (in the east) and later to the Lebanese-Syrian border areas."

http://www.newsmax.com/archives/articles/2005/3/5/142810.shtml

NEED TIME TO CLEAN-UP THOSE IRAQI WMD'S?

Assad Secretly Deploys Joint Iranian-Syrian Units in Lebanon

Assad has deployed Iranian military and intelligence units across Lebanon alongside Syrian secret agents and Hizballah. They also man early warning stations on Lebanese-Syrian and Lebanese-Israeli borders and Syrian-Iraqi borders.

http://www.debka.com/article.php?aid=995

REACTIONS

Washington takes steps for Syria's isolation after Assad's rejection of Lebanon pull-out. White House official Hadley notified Europeans that decision covers cutoff of Damascus' international banking ties and the flow of international funds to and from Syria through Lebanese banks.

UN Middle East envoy Terje Roed-Larsen travels Sunday to Europe, Saudi Arabia, Egypt and Gulf emirates to finalize the US-Arab-European consensus on international sanctions against Syria.

March 17 he will give Assad last chance for total pull-out from Lebanon or face up to UN sanctions. Chirac has already ordered French ties with Damascus severed at all government levels.

"We will not stay one day if Lebanese consensus asks us to leave," said Assad in hour-long unscheduled speech full of contradictions to parliament in Damascus Saturday. "But we cannot abdicate our commitment to Lebanese president."

He ceded only eastward redeployment of Syrian troops eastward to Beqaa Valley up to Syrian border - no withdrawal or reference to thousands of secret service agents. "Syria's role in Lebanon will not end with military withdrawal," he said.

Lebanese opposition leaders immediately rejected Assad statement as failing to announce withdrawal and lacking timeframe even for redeployment.

http://www.debka.com/

MEANWHILE, IRAN THREATENS TO OPEN A SECOND FRONT

Iran Hints of Oil Embargo

Iran warns US, European pressure on nuclear could prompt oil crisis

Iran's top nuclear official warned the United States and Europe of the danger of an oil crisis if Tehran is sent before the UN Security Council over its nuclear programme, rejecting outright their demands to halt uranium enrichment.

Mike Terry,
.
Rush Limbaugh has a $250M Contract with Clear Channel Premiere
through 2009. (About $30M per year)
http://www.clearchannel.com/radio/
http://www.premiereradio.com/
.
If his Contract does not prevent him from Airing his regular daily
Talk Radio Show on Shortwave Radio; he could easily put a simulcast
or rebroadcast of his daily Talk Radio Show on Shortwave Radio.
.
The key for him would be if he could charge (bill) the existing
Advertisers for the "Additional" Shortwave Radio Air Time and the
'extra' {expanded} World Wide Shortwave Radio Audience.
.
Or - If he could have a 'separate' group of Advertisers Targeted for
the World Wide Shortwave Radio Audience. (It's About The Money)
.
Hey Rush Limbaugh could be a Trend Setter with other current Talk
Radio Personalities following with their own Shortwave Radio Shows.
.
Another thought would be that Clear Channel could get into the
Shortwave Radio Business and put a select number of their current
under-contract Talk Radio Personalities and 'others' on their own
Shortwave Radio Stations and Transmitters.
(From Deep-in-the-Heart of Texas, USA.)
? If Clear Chaneel got into Shortwave Radio would others follow ?
.
Yes - Rush Limbaugh could be on Shortwave Radio and Heard
24/7 Around the World.
.
.
HELLO EVERYONE - WRITE RUSH LIMBAUGH
AND ASK HIM TO GET BACK ON SHORTWAVE RADIO NOW !

"Tom Sevart" <n2uhc.spam@yahoo.com> wrote in
news:38url5F5r93nbU1@individual.net:

Hey Tom, do you find yourself using such terms as Diversity, Racism, Multicultural, Inclusive, et al. with astonishingly regularity.

You can be indoctrinated with many forms of racism, Jewish against non-Jews, blacks against white, Islamic against Jewish, etc., but for some reason so many people find it necessary to say the same asinine politically correct things in response to specific posts only. A gay Priest molesting children is endlessly newsworthy, but a gay Rabbi molesting children never makes the news.

"I only hope that poor girl isn't indoctrinated with the poison of racism by her parents."

How pathetic. It reeks of political correctness, yes Tom, you have said the politically approved sensitive thing for the day. Now spend a couple of hours reading articles of Christians being persecuted by gays, Jews (the ADL and the preposterous separation of Church and State myth), the Government, etc.

Somehow, I can imagine that this persecution would not bother you in the least.

An article from the ADL about the JDL. READ THE LAST SENTENCE BEFORE THE URL TO THE QUOTE!. Look Tom, they mention, (shudder), Jewish racism. Don't sit so high on your throne professing judgement on the foibles of other people and organizations.

"About the Jewish Defense League:

The Jewish Defense League, also known as JDL, was established in 1968 for the declared purpose of protecting Jews by whatever means necessary in the face of what was seen by the group's principals as their dire peril. The founder, national chairman and leader of the JDL was a then-38-year-old ordained rabbi from Brooklyn, New York, Meir Kahane, who, in 1990, was assassinated in New York by an Arab extremist.

In Rabbi Kahane's gross distortion of the position of Jews in America, American Jews were living in a fiercely hostile society, facing much the same dangers as the Jews in Nazi Germany or those in Israel surrounded by 100-million Arab enemies. Rabbi Kahane believed that the major Jewish organizations in the United States had failed to protect America's Jews from anti-Semitism, which he saw as "exploding" all over the country. "If I have succeeded in instilling fear in you," Rabbi Kahane said in the closing statement of his standard speech, "I consider this evening a

success."

In fact, Kahane consistently preached a radical form of Jewish
nationalism which reflected racism, violence and political extremism."

http://www.adl.org/extremism/jdl_chron.asp

CNN Article on JDL terror:
http://archives.cnn.com/2001/LAW/12/12/jdl.arrests/

"Federal authorities Wednesday charged two leaders of the Jewish Defense
League with conspiring to blow up Arab and Muslim institutions in
southern California, including the offices of Arab-American congressman
Rep. Darrell Issa."

Go Figure. Racists, in the JDL, do you suppose that they indoctrinated
their youth as well?

Just as I thought. You really don't care about shortwave, just about spreading your ideology. Well, go spread it someplace else, like talk.politics.misc, or alt.conspiracy. The same goes for Al Patrick, who is more interested in the narrow ideology of the kooks on shortwave rather than on getting the many varied viewpoints shortwave offers. I suspect that most of the people here aren't really concerned about shortwave as a hobby, just about finding another outlet for getting "news" that agrees with their worldview. Well, there's something on shortwave for everybody, but try stepping outside your closed little world and listening to viewpoints other than yours.

What will you do when XM and Sirius drop the BBC or "censor" it the way the satellite services do with CBC's As It Happens? I figure it will happen about the time that the US government comes for our radios. You seem very concerned about that, but not about the fact that anything that comes over a satellite can be censored or dropped by the well connected corporation that provides the satellite service. Like with TV satellite, just TWO big corporations control satellite radio. THEY control what you hear and don't hear. With shortwave, *I* control what I hear (well, me and the ionosphere, but at least the ionosphere can't be controlled by a big corporation or a government-yet). That alone makes shortwave superior to a corporate controlled, fee for service satellite media source. When the US government censors satellite as heavily as they do broadcast and cable media, deciding what gets to be aired and making sure there's nothing "seditious" there that might give the sheep ideas, shortwave will still be there, still giving UNFILTERED news from a multitude of countries (well, there's still the propaganda factor to consider, but at least shortwave content is not passed through a couple big all powerful entities), and still unblockable, uncensorable, and defying all attempts at jamming. I suspect the day will come when posessing a shortwave radio is a capital offense in the US, like it is in North Korea, and the ultimate in news sources is illegal to listen to precisely because the government cannot control it. Government can control MW/FM/broadcast TV, cable TV, and satellite services, but they can't control shortwave.

It seems so. He knows that he doesn't care about shortwave, just about spreading his ideology. Well, this is not the place for it. To be fair, other posters seem to regard this group as a forum for their mental instability. Al Patrick posts bible quotes all the time and suggests that God agrees with his favorite kook hosts, while dxAce insults everybody with the same insults all the time and listens exclusively to Diego Garcia. But David posts the most off topic posts, and most of the stuff he posts isn't even on shortwave (at least Al's kooks are on SW) but stuff he got off the internet.

It must be nice to be independently wealthy. Able to surf the internet
and listen to Diego Garcia all day without worrying about how to pay the
bills, able to buy THREE Drake tabletops without blinking and then
criticize "tards" who listen on portable radios. dxAce truly lives in a
rarefied world. He's the Paris Hilton of SWL, a legend in his own mind,
somebody who can afford to indulge in SW and the internet and not have
to get up early every day to go to work. Some people have all the luck.
Meanwhile, the rest of us will be slaving away to pay their bills.

I grant you, JD, that people in that position can do stupid crap-
I've seen that myself- even been guilty of it (just a human, not
an angel ;-).
But this went on for a very long time, using a lot of equipment.
That it was done in such a major manner without any oversight
at all is difficult to believe. "The simplest explanation is
usually correct," and the simplest answer is that it was
a government exercise.

> It certainly helps, but it is absolutely no guarantee. I also highly doubt

Sometimes I deeply regret quitting and surrendering my clearance,
which is worth considerably more than its weight in gold.
Anyone who would lose his over such an outrageous fit of
stupidity needs commitment to a nut-doctor hospital.

Sorry, JD; there's just no way I buy this was some contractor
minion having fun- too much time and too many resources
were involved.

The government doesn't censor regular radio. The regular radio
censors itself.

I didn't say I was going to sell all my radios. I'm keeping them
handy. Right now, though, I'm really digging the freedom to tune into
the Beeb or Radio Australia or Koln without any static.

The American people are so freaked-out and scatterbrained already the
government sees no need to be overtly restrictive on the flow of
information. People don't even notice the bad news when it's right in
front of them.

Might as well go down in flames with full-bandwidth audio, don't you
think?

In Sacramento we have an FM station called Howard 93.7. "Howard in the morning...Stern all day". Yes, they play Howard Stern 24/7. Whoever thought this up should be shot. I suspect that Rush 93.7 would be about the same, just the opposite end of the spectrum. Who wants to hear the SAME GUY ranting on and on all the time, except followers of Gene Scott? That said, I suspect that Rush Limbaugh will have very little interest in him outside of the US. His commentary is very America centric, and he represents a political bloc that doesn't exist in other English speaking countries.

cuhulin@webtv.net wrote in news:11746-4229BE25-205@storefull-3251.bay.webtv.net:

How many more years until you turn 16?

Respect is given to those that deserve it. No doubt that the Iraqi conflict is filled with individual men and women that have honored themselves and their fellow soldiers and have honored this country. Unfortunately, just as with police, the situations where individuals go awry are often glossed over by the military hierarchy. i.e. you don't get the true story when they fuck up. You get "their story". (the military leaders).

Saying that you support your troops should not mean that you sanction everything that they do, such as torture, rape, or the careless sacrifice of human lives of the indigenous people of the countries that you are occupying.

Supporting your troops should mean that you will back them in situations where it is reasonable for them to have acted in such a way that unfortunately caused the needless loss of human life. In other words, they weren't intoxicated, or simply having fun shootin groundhawgs (sic), or that they were not delinquent in their duties to the point that they acted in panic in a situation that would have a different outcome had they been performing as expected. People are being killed.

The dead on both sides are not actors, they do not get up when the movie is over, collect their paycheck and go home. Before you make someone dead, you should be justified in doing it. You should not do it capriciously.

More importantly, supporting your troops should mean that you will help to take care of their loved ones, whether they (the individual soldiers), make it home or not. You should make sure that their psychological and physical problems are taken care of, especially if they didn't have them (the problems) before going to war.

Look here: http://www.fallenpatriotfund.org/ there is a picture on this page that shows various people, the first picture down from the top. Look for Marine Staff Sgt. Mark Graunke Jr. He has all his parts (before going to Iraq, no doubt).

Then look here: http://www.t-nation.com/readTopic.do?id=573963 Still the first picture down. What a difference. The following is a description of what changed, body part wise, since the picture above.

(or here, in case the image on the above site was removed or inaccessible, http://www.cadet-world.com/)

"Graunke received $40,000 from the Foundation to assist with living expenses after he lost his left hand, left eye, right leg above the knee, his right thumb and index finger, and hearing in his left ear when a bomblet exploded in his hands during his work as an Explosive Ordnance Disposal (EOD) Technician on July 2, 2003. Graunke has a wife, Florence, 24. "

But you know what, I bet that you don't consider being concerned about his needs "Supporting our Troops".

Let me know when you get your drivers license.

Source record: 10539

I have an ICOM 737 and it has always worked very well. I do mostly CW
and the other day when I turned it on, the keyer would not send dots;
only the dash side works.
I checked out the keyer paddle, cable, 3-conductor plug and everything
seems o.k. (The blue keyer button the back is in the right position.)
I tried removing/repalcing the plug several times to clear any dirt,
but no results.
This leads me to believe something went wrong in the keyer circuit in
the rig.
Anybody have any other ideas?

Italy greets dead agent as hero

By Christiano Corvino

ROME (Reuters) - The body of an Italian secret service agent shot by U.S. forces in Iraq has been flown home to a hero's welcome amid mounting anger in Italy over his killing.

Agent Nicola Calipari died while shielding reporter Giuliana Sgrena, just freed after a month held hostage, from U.S. troops who opened fire on their car near Baghdad airport.

Sgrena was wounded in the attack and flew back to Italy on Saturday for medical care. She rejected a statement by the U.S. military that its forces had fired on the Italians because their car was speeding towards a checkpoint.

Calipari's coffin arrived at Rome's Ciampino airport at midnight on Saturday aboard a C-130 military plane. His wife, mother and daughter broke down in tears as his casket, drapped in an Italian flag, was carried out by a guard of honour.

President Carlo Azeglio Ciampi held both hands up to the coffin, standing motionless in front of the body for almost two minutes before allowing it to be placed in a hearse.

Prime Minister Silvio Berlusconi, government ministers and clergy looked on, while five of Italy's seven national television stations broadcast the return live, underscoring the huge sense of shock and disbelief in Italy over the killing.

Italy has proved one of U.S. President George W. Bush's most fervent allies in Europe, but Calipari's death has put a strain on relations and Rome has demanded a full investigation.

The U.S. military said its forces shot at the car on Friday evening after flashing lights and firing warning shots to try to get it to stop.

Italy's minister for parliamentary relations, Carlo Giovanardi, told state television on Saturday that he did not believe the U.S. version of events.

You're getting as wacky as Al Patrick. Care to give a reason as to why we'd want to kill these people? And why we didn't do a better job of it? If we'd -really- been out to get her/them, a roadside bomb would have been the -perfect- cover for the killing considering the road they were on. And we'd have been out of it clean.

Do you guys ever try to think some of this crazy stuff through -before- your knee jerks? If not then, how about at least before you post it?

1063. My - ICOM 706MKII - For Sale on ebay

Newsgroup: rec.radio.shortwave
Date: 2005-03-06 06:02:36 UTC
From: erfurth@gmail.com
Message-ID: <36ba001b.0503052202.75e256@posting.google.com>
Source record: 10602

Hi,

I have listed my ICOM 706MKII on ebay.

This rig is great for the shortwave listner who is working on getting
a HAM license.

It tunes from 1.8MHz to 199.99MHz. The receiver in this unit is one
of the very best ever made.

The rig is in excellent condition and comes in the original box will
the mic, power cable, mobile bracket, owners manual and quick start
card, etc.

To see pictures click on this link:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&rd=1&item=5755587418&ssPageName=STRK:MESE:IT

If the link does not work for you just go to http://ebay.com and do a
search for: 706MKII

This item ends TODAY Sunday March 6th. It also has a BUY-IT-NOW
price.

Thanks,

Bill

1064. Russian HAM Web Site

Newsgroup: rec.radio.shortwave
Date: 2005-03-06 06:03:05 UTC
From: "Dr. Artaud" <NoSuchThing@Notreal.com>
Message-ID: <112l78pgltdfj92@corp.supernews.com>
Source record: 10601

For your perusal, a Russian HAM Radio site, of little use to me, as I don't speak Russian. But, and I have a big but, for some strange reason, the (I don't know how to put it in computerese), the page that contains all the links to all the pictures and text used by the page is in English.

Perhaps whoever compiled their page spoke English. But, and I have a big but, even stranger, there are numerous PDF files on this page (not extensive, but interesting), some are of manuals, and some are Service Manuals, and they are in English.

There are also executable programs. I viewed the instruction manuals for a couple of radios, they were posted in PDF format, and I saved them to the drive and scanned them for viruses before viewing. No problems though. They are in English.

Let me know what you think, perhaps someone knows some of the .exe by their names.

Go here: http://hamradio.online.ru/ftp2/ this is where the files are.

If you click the link at the top on the above page, described as "Parent Directory", you go here:

http://www.cqham.ru/

AH HA! I found an English entrance into the site, so this explains it somewhat. Anyway, give it a look if you wish.

http://www.cqham.ru/sch_eng.html

Anyway, on this page, some of the links do not seem to be adequately explained. Simply hold the mouse pointer on the various links and the description will be seen in the script on the bottom of the browser.

Some of the Military HAVE been doing a lot better. Murdering just ONE man is underachieving to the extreme. That whole bunch should be demoted.

Have they not learned how to do it RIGHT? These guys know what it's all about. *Wholesale* death inflicted on a population that did NOTHING to the USA.

==========
In an article in the online edition of the British medical journal The Lancet, U.S. and Iraqi researchers calculate that around 100,000 Iraqi civilians have died since the U.S.-led invasion in March of 2003.

Dr. Gilbert Burnham of the Johns Hopkins School of Public Health, a co-author of the study, says most of the casualties were women and children.

http://www.contactomagazine.com/killedcivilians1028.htm

Get used to the fact that in a public forum there are always a few
knuckle heads around that need to go in the kill file. Put the few
"special cases" there and I promise the news group will be readable.

Just before the end of the broadcast at 00:00 the RA signal level was up
to average S6 and sounding fair.

RA is S10 on 13,630 from 07:00 to 07:30 so far.

No sign of NZ on 9885 at this time for me.

RD - Hello it's a Metaphor.
.
To Me the Phase :
"Rush Limbaugh 24/7 on International Shortwave Radio World Wide."
is a METAPHOR for bring some really entertaining Talk Show Hosts
on the Shortwave Bands that would be appealing to the American
(English Speaking) Listener. Plus provide more of America's Voice
of the People to everyone who wants to Listen in the Around-the-World.

Most of the so called Shortwave "Kooks" lack the talent to be on
the Commercial AM/FM Radio Stations that are paid for by Sponsors
that are Real Businesses.
.
Substitute the Name "Rush Limbaugh" for any of the Top 25 AM/FM
Talk Radio Talents. Put each of them on Three Hours a Day which
equals Eight Regular Hosts Around-the-Clock Monday thru Friday
with several other Hosts representing 'different voices' featured
during the Week-End.
.
Going back to my original post : Clear Channel could get into the
Shortwave Radio Business and put a select number of their current
under-contract Talk Radio Personalities and 'others' on their own
Shortwave Radio Stations and Transmitters.
(From Deep-in-the-Heart of Texas, USA.)
? If Clear Channel got into Shortwave Radio - Would Others Follow ?
.
and the world would be a better place ~ RHF

1085. OT: Use an "atomic" clock in Europe?

Newsgroup: rec.radio.shortwave
Date: 2005-03-06 11:17:57 UTC
From: Sanjaya <sanjaya_49@yahooNOSPAM.com>
Message-ID: <FFBWd.3149$CW2.1213@newsread3.news.atl.earthlink.net>
Source record: 10623

My "atomic" clocks (set by radio signals) can give me
the exact time for eastern, central, mountain and pacific zones.

A friend in the UK wants a clock like that, but I don't even know
if there are the same type of signals available in Europe for setting
the exact local time like we have in North America.

Nor do I know if there are similar clocks that can set the time
for European or UK times.

Anyone know if the clocks exist and access a signal like our NIST?

1086. Re: (OT) : Write Rush Limbaugh - Ask Him to Get Back on Shortwave Radio Now !

This is no excuse, but soldiers do make wrong decisions during war with tragic consequences. Pick a war...any war...even the so-called "good war" and you will find plenty of examples. Does anyone know if the soldier(s) were regular or reservists. The car may have been speeding or they may have thought it was speeding.

Being a soldier in an urban warfare situation is stressfull in itself. Add in a role they were never trained to do...that of policeman and peacekeeper and you have to expect mistakes.

The unfortunate part is that the politicians who never served in such a situation but were the ones who started this war are now figuratively calling for some poor soliders head.

Easiest solution is to not listen to him. He was entertaining in the early Clinton days, but imho he's way overboard.

I'm not sure I understand your idea when you say " Substitute the Name "Rush Limbaugh" for any of the Top 25 AM/FM Talk Radio Talents. Put each of them on Three Hours a Day..."

Are you saying put Rush into a bunch of shortwave slots? I don't understand what would be done by subbing his name for established AM/FM talent.

"also have an interest in telescopes. Years ago, anyone with any pride

labored to grind and figure the mirror for their telescopes, assembling

the entire unit, understanding something about optics in the process."

Actually i've read numerous articles in the last 10 years about backyard astonomers who have built their own reflector including the mirror. Several guys have built their own binoculars (parallel telescopes), designed parallelogram mounts for smaller bins, etc. Optical instruments are cheaper now than they have ever been, so it is indeed easy to call Orion and place an order. But DIY is still alive in backyard astronomy.

And the real issue with that couple was not that they caused the interference, but that they ignored several formal complaints from the FCC. And the FCC could have used a little more common sense once they got the attention of that elderly couple. Culpability on both sides.

It is entirely possible that the supervisors were unaware of it. If you put Joe Blow contractor out in the middle of the desert for a few months with a bunch of radio equipment with little or nothing else to do, then you have a recipe for mischief. It's unlikely his supervisors were listening to 3700, 4300, 6500, or 10500.

> "The simplest explanation is

Which doesn't explain why they shut the system down after it was tracked down. Or why the FCC, which refuses to acknowlege the existance of numbers stations, would tell hams where the signal was coming from.

Yes, time signals are available in Europe. I thought that WWVB's signal was
supposed to be heard worldwide? But anyway, a British friend of mine bought
an atomic watch several years ago and it worked fine. I think there are
other VLF time signal stations in Europe, too.

Hmmmmm.... well then, perhaps both I and Ace-hole could be right:
Government facility, government equipment, but doo-fuss operator.
If that's correct, the supervisor shouldn't get away scott-free;
it's his business to know what his people are doing.

Morning Telamon,
Tried to write you direct but you address is bad. Sorry about you and
Bill but that what America is, have your opinion! I don't see it that way
but then that's me.
How's your scanning doing, did you ever get your antenna up over the
ridge?
My DXing from the west coast has been doing well, lots of Asian stations
and I will be in the Philippines in two weeks and I'm looking forward to so
great DXing from there. I'll only have my YB400 and maybe the FR200 as a
backup but I'll use the yo-yo that came with the radio as I have all over
the world plus I'll take Bills double yo-yo and see how that works there.
Glad the storms are gone from here, we had another power outage
yesterday while they repair more lines, about two hours.

One of these days before I move for good we need to do coffee, meet you
halfway or something.

Chao,

Burr

But it HAS! The Brits, Canadians, Iraqis and reporters HAVE been bombed
and shot
by th Americans. Let's not forget the wedding parties. It's time to end
the
invasion.

mike

****

it's real easy to see who has seen combat and who has not. it's easy to
take shots at the boys over there when you have no idea the stress they
are under. i don't support this war; but i support the men over there. i
only wish the Shrub and his veep- ("i don't have time for Viet
Nam"),could
be there, and go through what these men are going through.
i,like a lot of posters here know war, and how it feels. it's nothing i
would wish on you, or anyone. when you and Ace go after each other, it's
kind of fun to follow the posts. friendly fire is no laughing matter. it
happens in all wars. it's a fact of war. how would you feel if you were
the
one to give the order to fire, or pull the trigger on these people? if
you
make it out alive, you'll remember that moment all your life. again, i
wish
that on no one. please think a little more before you post. if you want
to
pick on the Shrub, or his veep, be my guest. please give the man,
putting
his life on the line his due. as of 3.05.05, 1502 young American lives
lost
over there. and God knows how many of Iraq's.
sorry about this; i'm getting a little long winded in my old age...

Drifter...

Hi,
from Frankfurt (Germany) it broadcasts the VLF time-station DCF77. Many
watches/clocks tuned to DCF77 are currently available on market.
DCF signal is "heard" here in South Italy too, so I think that signal is
pretty good almost all over Europe.

Best regards

Paolo

Thanks Tom.
The page Ace sent shows a digital radio controlled clock and
the info on said clock mentions the signal comes from Rugby England.

Radio Australia on 6020, quite excellent this a.m. (1200 or so UTC). Pretty weird program though, about a nun who became a prostitute on "Encounters". BBC last night on 6135 and 6005 quite good also. This would be 0500 or so UTC.

RN from Sackville is always loud. I'm not listening to them as much the past while - much less news and much more opinion or odd feature about something rare with more opinion. I think their programming has changed for the worse - maybe the producers have changed? I don't mind broadening my horizons, but excessive opinion means switch to something else. RA has some unusual stuff, but it is simply presented without all the opinion. All of this is my opinion of course. ;)

Source record: 10657

INTERNATIONAL SPACE STATION LIVE ON ECHOLINK MARCH 8th TUES 1410GMT

The next International Space Station's Expedition 10 ARISS school contact will be with students at Rains High School in Emory, Texas on Tuesday, 8 March 2005. The event is scheduled to begin at approximately 14:10 GMT.

This contact will be a telebridge between stations NA1SS and WH6PN in Honolulu, Hawai'i, so it should be audible to anyone in the areas of the Pacific near the islands listening in on the 145.80 MHz downlink. The participants will conduct the conversation in English.

"Rains High School, a county school located in one of the smallest counties in Texas, is comprised of mostly low-income students who often do not get the opportunity to participate in enriching programs. The opportunity to talk with the astronauts on the International Space Station will expose our students to a world that exists beyond the boundaries of Rains County. The questions asked of the astronauts and the ideas generated by the answers will be used as jumping off points for further discussion and research."

Audio should be available for this contact Via EchoLink in the following conference rooms:
AMSAT node 101377
EDU_NET node 77992
See further notes below
Via IRLP Reflector REF9307 starting at 14:00 UTC
REGISTRATION REQUIRED (see below)
Via the internet:
URL: https://e-meetings.mci.com/
CONFERENCE NUMBER: 6037948
PASSCODE: SPACE STATIO

Students will ask as many of the following questions as time allows:

1. How would a baby's development in the womb differ if the mother were in space?
2. What do you think will be the greatest technological advancement that will come out of the research you all are doing now?
3. How do you monitor your radiation exposure?
4. How did you adjust to Newton's third law of motion while in space?

5. Since you have been in space so long, have you had the
opportunity to notice changes that have occurred on the surface
of the earth from your perspective?
6. You have learned a lot of science, but what was the one thing
you did or experiment you performed, while in space,
that you remembered reading or studying about in school, that made
you say, "Wow, it really does work that way"?
7. Do you think people will be able to spend the rest of their
lives living on the space station?
8. Could a sphere large enough to let a small fish swim in it be
formed in near gravity and could a fish actually swim in
it?
9. What is the material used on the space station and how safe is
it from space debris?
10. Are there any lubricants on the space station and if there are,
how are they affected by weightlessness?
11. Have there been any new discoveries by researchers in space
concerning the Texas state molecule, The Bucky Ball, C-60?
12. Are you allowed to carry person items and if so, is there a rule
on how much you can take?
13. Do you ever get to review the final results of the experiments
you help to conduct on the ISS?
14. What does it feel like when the shuttle takes off?
Does it hurt?
15. If you were to push a hot wheels car on a circular loop in space
in the space station, would it go forever and maintain
the same speed?

Please note, the amateur equipment on the ISS will be turned off
prior to the beginning of the contact. It will be returned
to service as quickly as possible.

ARISS is an international educational outreach program partnering
the participating space agencies, NASA, Russian Space
Agency, ESA, CNES, JAXA, and CSA, with the AMSAT and IARU
organisations from participating countries. ARISS offers an
opportunity for students to experience the excitement of Amateur
Radio by talking directly with crewmembers on-board the
International Space Station.
Teachers, parents and communities see, first hand, how Amateur Radio
and crewmembers on ISS can energize youngsters'
interest in science, technology, and learning.
Further information on the ARISS programme is available on the
website http://www.rac.ca/ariss (graciously hosted by the
Radio Amateurs of Canada). Information about the next scheduled ARISS
contact can be found at
http://www.rac.ca/ariss/upcoming.htm#NextContact.

IRLP Notes
Participation in this contact is limited to 20 connections
and requires pre-registration.

Please contact Wayne, VE1WPH, via e-mail at ve1wph@rac.ca
for pre-registration and connection instructions.

EchoLink Notes
The contact between the ISS and school lasts for about 15
minutes +/-. During this contact, we appreciate everyone's
patience and understanding. We must mute everyone except
Dieter, KX4Y to avoid inadvertent, interfering
transmissions into the conference room. Thanks for your
understanding and co-operation.

Thank you & 73,
Scott H. Stevens / N3ASA
ARISS Team Member

They do exist, but the radio frequencies are different so an American
clock won't work there.

Well, the frequency is the same (60 kHz), at least for MSF in the UK, however, the way the time information is encoded is probably different. I'm not sure that that part of it is standardized.

It's a "typical" catch - it's a 100,000W station (good sized, but
not huge). I use to get it regularly when I was using a Sangean 505
with the reel-up antenna.

Tony

Yes. There are two functioning stations that carry time signals
related to atomic clocks: MSF (Rugby, England) on 60 kHz and DCF 77
(Frankfurt, Germany) on 77.5 kHz. They have a range of 1500km or about
900 miles.

There are many clocks sold in Europe that use one or other of these
standards; some can use either or both. A typical alarm clock might
cost ï¿½10 or ~$20; but more expensive clocks are available.

Be warned, though, some digital clocks helpfully have a 'zone'
setting, to enable the display of time in a different time zone - but
not all of these will display the seconds count when so set. Having
the seconds display is a useful tool for monitoring SW broadcasts.

I have heard that European clocks can sometimes be used in North
America. Providing the local noise level is low, and the clock has its
internal antenna set for maximum signal reception, there is a ~3hr
propagation window at about midnight local time during which these
clocks could update. I have no direct experience of trying this;
others may know more. Digital clocks usually have an icon that
displays when a correct update has been received.

Tell your friend to visit an 'Argos' store and get their free
catalogue, or visit their website at www.argos.co.uk or carry out a
European-based web search. Some Oregon Scientific weather monitors
also feature a radio-controlled clock, but some don't.

Gee, you're probably right. NOT!

One has to figure that that road to the airport is a highly traveled route. Are the US forces opening fire on every single vehicle going through? Obviously not. I repeat, OBVIOUSLY NOT.

However, they WILL open fire on a vehicle that approches them at high speed, refuses to heed warning signs, signals and warning shots.

Don't you 'tards stop and think, even once?

Boggling.

I picked up an older Sony radio at a second hand store. It's a portable, with AM/FM/WB. Looking through search engines, I'm unable to find any information. On ebay, someone was selling a manual for a Sony ICF 7370, and the radio looked similar to this one, but the picture was poor quality. I'm just curious about it, and wondered if anyone could share information. Darren

I don't understand why clear channel would want to broadcast on shortwave. Shortwave is just a medium, and not many people have the equipment to receive on that medium in the US. There is a reason that shortwave is dominated by government and privately owned stations that are subsidized by non-advertising money. The reason is small audience and no advertisers equates to no profit.

Broadcast FM & MW and satellite FM have a much much bigger base of listeners and clear channel will go where the advertising and subscription money is. I have to admit that it would indeed be humurous to have Rush Limbaugh holding forth next to bible pounders, survivalists, denizens of the Montana forest and those who are still sure the commies are still poised to invade the U.S. via Mexico. Rush has a loyal group of followers now so why risk losing some by switching to a relatively unkown medium like shortwave. It would make as much sense to broadcast on LW.

I'm still completely confused by: "Substitute the Name "Rush Limbaugh" for any of the Top 25 AM/FM
Talk Radio Talents. Put each of them on Three Hours a Day which equals Eight Regular Hosts Around-the-Clock Monday thru Friday with several other Hosts representing 'different voices' featured during the Week-End."

Switching? who mentioned switching? Rush was on WRNO years ago because the owner liked his program and decided to air it.

If Rush were to air the ENTIRE program (it is on AFN currently for one hour), it would be in 'conjunction with' his current line-up of over 600 stations and not a 'switch' to shortwave.

Some of you out there need to learn how to think things through.

Yes, I know you're 'confused', but give thinking a tryout, you might like it!

Mega activity as of 1604 on 6230 USB, some US Navy strike group training excercise going on. It's mostly phonetic callsigns and "crypto" language but you can still get a general idea of what is going on.

4 Aircraft "Magnum 451, 440,454,453" went airborne according to the radio ops.

Other callsigns (ships and subs?) Foxtrot Echo Five, Lima, Charlie, Delta, Charlie echo five, november tango romeo, echo fox, Oscar, Foxtrot.. and others.

Coming in good here at 1614, chances are they are operating on other frequencies
as well, as you probably know.

Yup, I heard them talking about other freqs but so far I've only been monitoring the 6230 frequency because of the excellent signals.. signals were booming better in the early morning 1000-1200 UTC>

Maybe some milair monitor can help us figure out the callsigns and what ships, subs, and aircraft they belong too.

Well, I did see something about some sub exercises that supposedly attributed to the beaching of the dolphins.

Dolphins, whales etc., have been beaching themselves for unknown reasons before the advent of sonar, etc.

RHF, you are totally right about the positive impact that someone of Limbaugh's stature would make on SW. I am totally for it and hope to see it happened ASAP!

But I also think we need to change the FCC rules about domestic shortwave. I don't pretend to know the law, but there's some legal reason that American shortwave broadcasters have to target their signal to people outside the US. I don't know what that is, but I strongly feel that shortwave would become infinitely more interesting and popular if this restriction was lifted.

But it probably isn't a lot of equipment.

Back a few years ago, ARRL's QEX newsletter printed some stuff about
government proposals for new radios that were the High Frequency
equivalent of a trunking radio system. These were frequency agile
highly automated radios that figured out for themselves how to
establish a connection on each end, no matter what the conditions.

Sounds like somebody was messing around with a prototype.

This on topic for several reasons. One of which is these clocks can be
set to UTC in the 24 hr format (and also the UTC date if so equipped).
The clock I have has the UTC date which is either the same or a day
ahead of my local date depending on time of day. This clock helps me
keep track of SW radio station schedules.

Just because someone doesn't want to participate in amateur radio doesn't mean they are technically illiterate. I am both a ham and SWL'er and sometimes I get bored with amateur radio even though I'm into digital modes, CW operating, QRP, homebrewing, SSTV, and beaconing. But my first love is and always will be HF listening. Personally I go in turns, listening to utes for a while, then maybe getting on the ham bands and chatting for a while.

But don't insinuate that because someone enjoys SWLing that they don't also enjoy amateur radio. Despite Steve's faults I have seen some good information come from his direction.

That depends. If you double it back next to the length of wire already run then it will not do much of anything. However, you could make a loop out of it. As an example if you already have a 200 foot run to the back of the yard you could then continue it across the back of the yard and then back to the house.

You would have created a triangular loop with three sides of more than 400 feet. That is a good size loop. The ends of the loop would be connected to the inner and outer coax conductors. Which end loop is connect to the inner conductor probably does not matter except for the local noise it will pick up.

Might be the the same bunch that's been operating what sounds like a
surface warfare net on 4741.5 for the past day or two at local night
(East Coast US), as reported on the WUN reflector. From the sound of
things, you may have found the air defense net. There's probably yet
another voice net somewhere coordinating the LINK-11 (TADIL-A)
operation as well.

Nothing as dramatic as that;
My own theory (speculation, more like) is a field
exercise in radio location for small teams.
It would be useful for small operations abroad.
We did a lot of stuff in the 80s and 90s on
HF and in the clear, just because it was handy.

> I also doubt we will ever know what the whole story was either way.
Agreed... Ah, well... It was interesting while it lasted.

What a lying piece of shit. Her story is so full of holes! Read it! It does not hold water in any way, shape, or form.

She states she was against the war, so would she say anything good about the Americans? Of course not. She says they were driving slowly, but they almost lost control of the car avoiding mud puddles! To an Italian, driving slow is anything under 100 mph. She goes on tho say how her mind went to her abducters saying that the Americans did not want her released. In actuality, that is not what they said according to her earlier statements. It what she wished they said. What a boob!

The inner (center) and outer conductor (shield) of the coax. Generally
there will be no preference as to which way the loop is connected.

About two years ago in the Wal Mart stores here,I saw some Oregon
Scientific Atomic clocks for sale for about $11.00 each.I didn't buy one
because the exact time isn't that important to me.I am sure there are
other stores around here that do sell Atomic clocks and wristwatches.I
haven't bothered to look for them though.

I think their last transmitter died a couple years ago. I remember
reading somewhere, maybe Passport, about five years ago that Tahiti's
transmitters were old and worn out and too expensive to maintain because
parts for them are so scarce, so that as they died they wouldn't be
repaired, and Tahiti had no money to buy new transmitters, so they
wouldn't be replaced.

AND,

I run naked wire, copper then splice it to the coax through the wall and
around the wires in the house to keep the EMF off the antenna. The ground
bleeds off any EMF that hits the lead.

It's been a fun weekend here in rrs. But, alas, although you have kept me somewhat occupied as I've been working on my taxes...I must not waste any further time wavering around this fine usenet community.

A few last thoughtful words for some of you:

dxAss: Remember the words of Charlie Brown in "A Charlie Brown Christmas, who asked; "Don't you know sarcasm when you hear it???"

For Telamon: (Who claims he's killfiled me, but is still watching....) Learn what REAL spam is....and FIGHT IT! Don't let your hatred for one man cloud your intellectual judgement.

For Burr: The grizzled, grizzly bear of the old west. Keep fighting the good fight.

For Lloyd, born-again talk show host: Get a date. You'll feel better....

For Denley: (Who also has me killfiled...but is watching anyway) I have a new Native American nickname for you; "Algoniac Saukianuck Potowatta"...which means: "The Quiet Colon Hole"....

And last but not least, for CuHu....
Did you REALLY do Blueberry????

73, take care, God Bless and hasta la vista, baby....

Jack,

Thanks for your input, but I beg to differ with you. A general radiotelephone operator's license IS required to perform *any* work on comms equipment for aircraft or marine use. Further, GMDSS repairer or operator is required for using or repairing that equipment, as is a second or first-class radiotelegraph license for most large vessels. Plug-n-play aside, these licenses are still required, and anyone not havig one and working on such equipment is liable for big trouble if found out. Military is a different matter, as they train and certify their own, but commercial and private aircraft and marine must still abide by the regs (that is, if they are US licensed or serviced in a US facility).

Code is still very useful in an emergency if all other means fail. Indeed, this is why code became a part of ham radio. When it was being demonstrated to one federal regulator in the early days, the modulator section of the demonstrator's equipment failed and he switched to Morse. The federal official was so impressed, that it became a part of licensing regulations. Like it or not, we hams many times find ourselves in emergency situations where we have to relay or report message. How do you propose to do that if you have no spares and your modulator fails?

I don't use code, but I can in an emergency. This gives me a nice comfort zone. Some people prefer to use it exclusively. But I suspect that it will always be a part of the license requirement. Surely if you possess the necessary skils for electronics, you can master 5 WPM code which is now all that is required. It's a rite of passage to join the club.

Let us not forget that the license is a *privilege* and not a right, and can be revoked at whim by the FCC. It's something you have to earn, and the powers that be apparently feel that code is necessary, I suspect, for emergency purposes.

Regards,

Al

Trust you to deflate my cloud of hope! LOL Well, I don't give up
easy.

Found this cool program on one of the P2P nets called Power Translator
and it does English to Spanish/French/Portuguese/German/Japanese. It
does seem to do a pretty good job, so I usually write a chatty little
letter and sometimes have decent results.

I can scan the reply using OCR recognition and translate the response
with it too. Best program I never paid anything for! LOL

I speak fluent German so there's no problem there and the program
rates about a 97% in that language!

regards,

Al

Look, Bunghole, you're in way more threads than I am. You and the
Nazi from Ypsilanti or wherever and the WebTV guy seem to feel the
need to chime in on every single thread.

Shortwave is prevented by law from being part of the mainstream media
in the USA. Limbaugh is a train wreck; bad, but you can't look away.
The worst thing that ever happened to this country is that people
actually started believing his lunatic spew.

1246. IRC radio monitoring

Newsgroup: rec.radio.shortwave
Date: 2005-03-06 23:21:47 UTC
From: Barnard Peters <one@two.com>
Message-ID: <68udnfeXHr4XDbbfRVn-qw@comcast.com>
Source record: 10780
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,alt.pirate.radio,alt.radio.pirate,alt.radio.scanner

Though radio communications monitoring is fun and interesting
all by itself, there is more fun to be had participating in live
interactive radio monitoring with colleagues from around the world who
share the same interest. Having dozens of ears scanning the bands really
adds to the excitement. Having more people on-line means having more
ears on the bands. This posting is an effort to add more people to
zirc.org #monitor

Entry level as well as experienced listeners are welcome to join.

Read more info about this at at: http://s91586483.onlinehome.us/monitor/

To connect to IRC, you will need an IRC client. Mozzila and netscape
have one built in or there are many you can download and install. You
will need to connect to irc.zirc.org or pick a server from the website
at zirc.org. To connect, type "/server irc.zirc.org" and once connected
type "/join #monitor". There is a web based client at
http://www.zirc.org/chat/

Once logged on, simply start posting what you hear or just be a
fly-on-the-wall and watch what other people post and follow along on
your radio!

If I understand you then you have a single wire antenna outside the trailer and you ground the coax shield to the trailer (and other ground wires) at the point where the wire comes through the trailer wall. This sounds like a workable random wire antenna based on the fact that the trailer has metal over most of its surface area.

O Telamon,
I have a house in Ridgecrest, I run a longwire around the eves and into
the house. I have an earth ground where I ground everything. I use battery
power to run all my radios.

Down south where I keep my travel trailer where I say a few days a week
I use a Sony AN-1 and a Dipole on my scanner.

When I take my motor home out I use a Sony-AN1 or a Yo-Yo and sometimes
I use the double I got from Bill years ago. I also use "ears" for my CB so I
can get road reports.

When I camp in my tent I use a Single Yo-Yo or the built in antenna.

Burr

PS: Sorry Bill didn't say good bye to you!!!!

Maybe the news group should take up a collection to buy them a used low
power transmitter. I expect the Dx'ers that read the news group would
love that development.

>

Wrong. The worst is that as Rush ceased to be shocking, the big media
conglomerates started going further and further right (think Michael
Savage) in order to keep their ratings up. As big media rushed rightward
in search of the ratings that Rush once had, more moderate voices were

squeezed out, and soon much of radio became dominated by neofascist shock jocks who told Americans to trust them and not the "liberal media". And since moderate/liberal voices were either a) pushed out/nonexistent b) ignored or c) marginalized, Americans started depending on the right wing shock jocks for their information about the world. This is like having your whole worldview shaped by Radio Havana and Voice of Korea or the konspiracy kooks on WWCR. That dependence on entertainers for news, and Americans not realizing that the shock jocks' "news" was really entertainment and propaganda, was the second worst thing to happen to America.

As soon as CanaDuh shows some 'grown up' behaviour, 'tard boy.

Call your local 'tard boy and girl representatives. Tell them that CanaDuh has to step up to the plate.

Do it, 'tard, or be left behind right where your stinking piece of shit country is today.

Sheeesh... what a bunch of 'tards... get with the program.

Hello Al,

We aren't talking about the licenses required to repair radio transmitters, and I did agree with you in that respect. But those licenses are neither required onboard ship or aircraft nor is there a radio officer aboard who holds them. Except in the case of compulsory GMDSS where there has to be a GMDSS operator OR repairer on board - but he does NOT have to be the one operating the equipment.

There is no code required to OPERATE commercial marine or aircraft radio transmitters, it is a station license not an individual license. For an individual who privately owns a vessel or aircraft, his restricted radio operators license is for life and applies to any mobile maritime station that he operates from. No code.

Redundancy in all compulsory equipped vessels allows the necessary swapping or replacement of the active transmitters for the job. There is no repair capability aboard maritime mobile units. Vessels at sea were the last living reason for any existence of Morse code, and it became history a LONG time ago. That's it, it's the end of the era and should be relegated to the museum. There is no compelling reason for any unit to know it or use it ever again. Hams were required to know code for absolutely ridiculous reasons that had nothing to do with your nice but untrue anecdotal story, mate.

The early federal regulators were all members of that "club" you refer to (originally part of the Department of War), and they imposed that requirement on the hobby to make it difficult for the public to access "their" airwaves. Airwaves which incidentally belong to the public and are NOT a PRIVILEGE granted by the government. The government only has limited powers to regulate areas which so strongly affect the whole public, that without licensing and oversight, could aversely affect the whole public's right to enjoyment of those (highways, airwaves, etc) mediums.

I hate to burst the bubble of those who worked hard to learn code because they think ham radios will someday save the day for emergency communications, but not in the United States they won't. If any of you hams have been following what happened to the SHARES network in the last few years, you're almost out of the picture now. Every US Government agency now participates in SHARES, and amateur members are only allowed to have their net control make a single check-in. Except for SHARES, the nets that these agencies work in never permit amateurs. Reliable telephone systems, reliable cellular networks, reliable satellite systems, and finally, reliable HF-ALE nets operated exclusively by the government provide most of the communications capability that US emergency planners rely on. CW is not part of any of that network training or planning, nor was it ever for the last several decades. I'm sure you once worked hard to learn it, and some may still enjoy it. Fine, but let go of the thought that it could ever again play a useful role in emergency communications. It's an argument using old logic that simply does not apply to our present environment.

Of course if all the lights really go out, you 20+ wpm hams will be able to have your own secret-code that nobody else will understand ;-)

Did you every wonder why it sounds so reasonable for people on this NG to complain that some conservative political post is off topic (even if it concerns a shortwave related show issue), and for them to read you the riot act concerning the purpose of the NG, concerning supposedly equipment related issues, only to have threads of 30 or more postings of one person calling another 'tard. Yet no one complains that they are wasting bandwidth, or that their postings violate the spirit of the shortwave NG.

Kind of makes you wonder. Part of the mystery is that the people that complain of wasted bandwidth are the ones that most waste bandwidth. I especially like the <Plonk> notifications, like anyone really cares that some individual wasted bandwidth to let the world know that he no longer wishes to receive postings from so and so. Asinine.

No one is worried about Bandwidth, they simply don't wish to read posts that offend them, or that cause them to need to think, or they wish to uphold the time honored political correctness so widespread today.

Just an observation. I'll filter this post after I post it, because it will be filled with the same 'tard comments that are running rife on this NG.

Apparently the only witnesses to this event were the soldiers and the people in the car (the journalist and the two agents, one of whom is now dead and can't give an account). The soldiers say one thing, the journalist says another, and it's her word against theirs. I doubt we'll ever know what really happened unless some Iraqis come forward who saw it. The only part of the journalist's account I've heard was on Radio Havana which said the car was not speeding. If that's the best she can come up with then most people will believe the soldiers, case closed.

While any open sourced digital recording ability would be GREAT, I'd prefer mpeg4 or AAC format for its better quality in a smaller file. However, as a beggar, I won't be a chooser!

I'm already putting a few bucks away a week for this radio when it is rolled out. I love my Degen 1102 and would have no qualms about buying another product of theirs.

If they really were intent upon simply killing everyone, who would know?

Fact is, they didn't.

Dumb SOB's didn't have a clue as to what they were doing and they screwed up. When someone says stop, especially in that area, you stop. If that 'tard boy was indeed an Italian Agent, then he should have known better.

You need to wake up to the facts, 'tard, and listening to Radio Havana is not a really good place to get the 'facts'.

This is of course international news. I heard the story on Radio Japan
that gave both sides of the story on 17,875 this morning.

Keep in mind that the female journalist in question writes for a
communist newspaper in Italy when listening to reports on stations like
RHC. She is going to be biased against the USA.

She also either changed her story or was trying to change a
misconception from previous interviews. I am at the point where I
consider her report muddled at best.

In addition don't forget she was part of the action instead of being a
witness to the event. This makes it difficult at best for someone to be
"objective."

Welcome to the 'Net! LOL

I post my logs on occasion too, but really, how many people actually
read them to correct them. I look at others logs to see if 1) they're
anywhere near me, and then 2) if theyhave something rare, whether I
can hear it.

The thing about the 'Net is that everyone can get rude, nasty and
ugly, things that they cannot do in real life for one reason or
another. That's the big attraction. Oh, and don't forget the
supposed "anonymity" factor. Some people delight in tormenting others
because they feel they can not be tracked down. This is true only in
few cases. Most folks aren't thorough enough.

You can be anyone you want on the 'Net, and can stir up a shitstorm
the likes of which the world has never seen. Just witness the posts
here. Some folks think for days on a question to pose that will
generate such a maelstrom of replies. This is their life.

Me? I'll stick to posting and reading logs, Dogg! :-D

WWVB coverage outside North America is very limited, poweroutput is
about 30Kw IIRC.

However there are 3 other VLF time stations, and Seiko builds a travel
alarm clock that can pick up all of them. There is one in Colorado
(WWVB), The ones in the UK, and the one in Germany are both fairly low
power, and the fourth is in Japan. I used all 4 of them.

Thanks Bill! Great reading as usual :)

(hey, wheen are you gonna check
into the Liberty net again some Saturday evening?
ain't herad U in a coon's age!)

and now, a little diddy from Across the Pond. (enjoy!)

+ + + + - - - -

The lady of the manor,
Was dressing for the ball,
When she spied a highland tinker,
Wanking up against the wall.

CHORUS:
With his bloody great kidney wiper
And his balls the size of three
And a yard and a half of foreskin
Hanging down below his knee

The lady wrote a letter,
And in it she did say,
"I'd rather be fucked by you, sir,
Than his Lordship any day."

The tinker got the letter,
And when it he did read,
His balls began to fester,
And his prick began to bleed.

He mounted on his donkey,
And he rode up to the strand,
His balls across his shoulder,
And his penis in his hand.

He fucked the cook in the kitchen,
He fucked the maid in the hall,
And then he fucked the butler,
The dirtiest trick of all.

And then he fucked the mistress,
In ten minutes she was dead,
With half a yard of foreskin,
Hanging round about her head.

The tinker now is dead, sir,
And they say he's gone to Hell,
And there he fucks the Devil,
And I hope he fucks him well.

Hi All,

6085 GERMANY Bayerischer Rundfunk B5 Aktuell heard here in the CNMI at 2033 which a fair signal. News reports and correspondent reports in German. This doesn't regularly make it here, and I remember the old days when they were out of Muehlacker instead of Ismaning. We'll see what the card looks like.

7450 GREECE Radiofonikos Stathmos Makedonias (ERT3) heard at 2139 with telephone calls and Greek music.

6060 ARGENTINA R. Nacional (domestic service of RAE) heard at 1054 with fluttery fades making for poor overall quality with discussion about Argentina's debt, time check and news.

5030 BURKINA FASO Radiodif. N. du Burkina heard with fair but fluttery sigs at 18.41 with African drum mx and announcements in FR. Station ID at 1900 after "balafon" Interval signal.

3315 PAPUA NEW GUINEA R.Manus heard at 10.45 w/song "Paper Roses" and local island music and announcements in Pidgin. Nice level.

4815 BRAZIL R. Difusora heard at 09.11 with PT talk and ID's. Lotsa march music, so may have been some political thing going on. Good quality signal.

11780 BRAZIL R.Nac. Amazonia head with good sigs at 1035 w/Brazilian pop music and IDs.

11925 BRAZIL R.Bandeirantes heard at 0745 with great signal playing US oldies and several IDs' Played almost 45 mins of non-stop music before ID's. Early in the morning their time, so maybe just someone filling a slot. WRTH states that another station leases time from them as well.

13820 CROATIA Glas Hrvatske (V. of Croatia) heard at 0725 with a good signal, with announcers interviewing some sort of female choir. Man, these ladies sounded like they were all lit. Sounded almost truly drunk, and not understanding Croation, dunno what it was all about, but several positive IDs, and lotsa laughs.

Lastly,

9515 BRAZIL R. Novas de Paz heard at 09.24 with PT talk, IDs and EZL music.

That's about it for the weekend from the Marianas!

73s de Al

Source record: 10917

I also have a Lowe HF-150. A good receiver. Connecting an RF generator directly overloads the '150 at 120mV when the preamp is switched off, which is very good when you consider that the Icom R75 overloads at 100mV, also a very good figure. Note that I am talking about the point where the AGC "runs out of steam" and the I.F. strip is driven into clipping.
The minimum discernable signal on the HF-150 is 0.08uV on all ranges when the preamp is switched off, improving to .04uV when the preamp is engaged.
I just got through adding an LED backlight to my '150.....a nice ruby red color. Doing this mod is not for the faint of heart since it involves unplugging the LCD from its socket (a very fragile component) and very carefully peeling the reflective foil from the back of the LCD itself. After this is done, you need to remove the glue from the rear of the display with something such as alcohol. I used a product called Goo-Gone, but I am not sure how this affects the soft front surface of the LCD. I ended up with some micro scratches on the front of my display and ended up polishing it with 0.7 micron polish.
This is just one of those "rites of passage" that I needed to go through. I wouldn't want to do this again but would be willing to offer advice to those would would. There is a place in Youngsville, Ohio called Lumitex that actually makes the panels. I got ahold of a sample for possible use in the MW receiver design and I liked it so much that I threw it into the Lowe receiver.
What it consists of is a woven fiber optic bundle that emits light. This is very similar to the diffusing panel that is used in the Drake SW-8 receiver. You can actually change the color of the backlight by using a different LED at the end of the fiber optic bundle. I have been thinking about changing the LED color in my SW-8.
I hope this helps.

Pete

Tnx for the mod idea, I'm filing it. Now I need to find out which Lowe is best and how they compare to the AOR 7030+ that has been recommended by others on another post as the best. Right now I have a R-390A, Cubic 3030A and Mackay 3010A and might be moving to smaller quarters in about a year.

I like the word "soliloquy". One day, I was lamenting over the demise of my marriage, and I wrote down my thoughts. I emailed my words to myself, and a few friends. Someone wrote back, asking what my note had intended. I told them it was simply a soliloquy. In regards to radio, it is a theater of the mind. Much the same as written words. When you're dismayed by the thought processes of another individual, consider, they may have a mind full of garbage. Darren

Keep in mind, also, that the soldiers are not exactly neutral witnesses either. As has already been noted, they're already on edge from dealing with a situation in which car bombs are standard operating procedure for the enemy. The soldiers are going to view any car with suspicion, especially cars on the most dangerous road in Iraq, and they'll be ready to shoot at a moment's notice. In this sort of situation, "facts" are in the eye of the beholder, spin is everything, and nobody can say objectively what happened. I suppose that the inquiry will not come to a definitive conclusion because of this. As I pointed out, if the accounts come down to the speed of the car, then that's not a very good basis on which to build a case that the soldiers were wrong. Ace seems to have ignored the fact that I said this, and I must not have made clear that I viewed the RHC report with suspicion (most of the "report" was a rant on how US soldiers supposedly routinely shoot innocent Iraqis at checkpoints). I think that her case against the soldiers is weak at best, and since nobody can say objectively what happened, it's her word against the troops.

Left wing loonie just doesn't cut it anymore? Now, if you're anti war, you also have loose morals? That is the most asinine thing you've ever said, worthy of the Ace himself. Using your philosophy, he would claim you have to be a virgin to go kill people half way around the world. People who have never done anything against you.

Looks as though this thing is getting more twisted by the hour.

==========

In Sunday's edition of the newspaper she works for, the Communist daily Il Manifesto, Sgrena said her captors had warned that she might not leave Iraq alive because the Americans "don't want you to return." In a television interview, she speculated that ransom had been paid for her release and that it was possible the United States targeted her because it disapproves of the practice.

"I don't see why I should exclude having been a target of the United States," she said.

" Passport To World Band Radio" has a good section on amplified antennas..

I Swear by the SONY AN-LP1 meself; has a pre selector built in..

True, costs more that $19.95.. . . . .

Tnx for the mod idea, I'm filing it. Now I need to find out which Lowe
is
best and how they compare to the AOR 7030+ that has been recommended by

others on another post as the best. Right now I have a R-390A, Cubic
3030A
and Mackay 3010A and might be moving to smaller quarters in about a
year.

--

73
Hank WD5JFR

As much as I love the HF-150, I don't think it's in the same league as
the 7030+. The 7030+ offers many more features, greater dynamic range,
more filter choices, etc.

On an internet board local to me, there was somebody who came in and
took over the board, posting 30 times a day (out of 40 posts a day) and

insulting everyone, trying to get people banned from the group, etc.
Things have quieted down now, but she's still there, insulting people
and making stupid remarks. I've had a net connection for 10 years, so
I'm used to it, but it's still frustrating.

I think you're right Steve- I have owned both. But I sold the 7030 and still
have the Lowe. As you say, it is wonderfully built, easy to use and highly
portable. I have never overloaded mine.
Once backlit, a fabulous bedside RX.

Frankly, I have the room for a full 80 meter dipole in my back yard, and when I'm listening portable I take some wire with me, so I'm not concerned with small, active antennas.

I may be a purist, but I just don't think that any short, amplified antenna can work as well as a long, passive antenna. The shorter antenna will eventually miss part of the signal.

Use a kill file. A stinking Troll can post 1000 a day and it won't
matter to you. Ignoring Trolls works. We just had one come and go in
record time. He probable would have left even sooner if the one or two
people still responding to him would have stopped. These jerks live to
get a rise out of you and will leave if ignored. ignoring them deprives
them of their "fun."

Firefox has "chatzilla" for IRC. I made it to the chat room with only one hitch. Namely, the chat room doesn't appear in the list of available chat rooms. Otherwise, telling chatzilla to go to #monitor worked just fine.

I haven't use #monitor for at least 7 years. It was on a different server back then. There isn't a whole lot of chat, which is good. Once in a while someone types a frequency for a numbers station, or notes when GHFS is active.

This particular board (the local one) is Web based and doesn't have a killfile. However, you can "flag" individual posts for removal by the admins, and they can ban certain email addresses. On here, I can easily ignore certain posters without a killfile since on usenet each article has to have an "author name" and the vast majority of trolls aren't smart enough to keep changing it. The smarter ones keep changing their email addresses to avoid killfiles, but not their author names. So their posts are easily recognizable and ignorable. I should take my own advice and stop responding to political posts, I tend to be rather passionate about politics but this isn't the place for it.

> > > Me? I'll stick to posting and reading logs, Dogg! :-D

> > I'll post logs whenever I get a chance.
>
> You do that.

I will. Usually I don't wake up early enough to do some DXing, but I will be doing so in the future most likely, so I will be posting more logs. Usually I just focus on one band a day and write down everything I

can hear on that band, which means my logs are a mix of big boys and
small stations.

Multiple personality disorder? This should be interesting. Apparently we have two m II's on this board, one claiming he's gay (there's a gay SW station?) and the other one telling dxAce to stop forging his posts. I personally don't think it's Ace but the "Cupid" guy who was here a few days ago spewing stuff about certain regulars being gay.

Australia used to have a VLF version of VNG, but the transmitter died
and the Australian government decided not to replace it. I understand
that atomic clocks became very popular in Oz over the last few years,
and that closing down VNG made them all useless junk.

WWVB has a coverage area extending over most of North America, so
anybody in southern Canada, the continental US or northern Mexico can
buy a WWVB-set clock and get fairly good reception. I don't know about
VLF-set clocks in the UK, Germany, or Japan, but here in the US such
clocks are very popular and can be bought at most electronics stores and
even some drugstores (I heard that the Walgreens chain was selling

them). Another place to buy WWVB-set clocks is atomictime.com, which is where I bought my dual time flat panel (either wall mount or desktop) atomic clock which shows both my local time and UTC (the only atomic clock I could find that has that capability). I bet Atomic Time also has the Seiko clock.

The Patrolman line was a very good line of VHF receivers, sold by Radio Shack in the 80s. I used to have a 60. Randomly tuning across the VHF bands isn't likely to yield much, unless you know where to look-the band was used by public services such as police and fire departments, but most of those have gone to "trunk" frequencies and abandoned VHF, one of the reasons I got rid of my Patrolman.

I can't even picture it, but given that it's analog, it's not likely
to be very great.

Or rather, it's not so much that it's analog as that the analog tuning dates
it, to a time when such receivers weren't so great.

The average "police band" receiver from the analog era wasn't particularly
great. They'd have a relatively wide IF passband, and many designs were
just reworked from FM broadcast band designs. They likely had more than
ample sensitivity, especially given that VHF is line of sight only. Tuning
was usually full of backlash, and the tuning scale hardly accurate. They
were generally for non-serious listening "Oh look, I can hear an ambulance"
beause the nature of the "police bands" meant that often the frequencies
were not in constant use, at least away from the big cities, and if you wanted
to hear things you need to be constantly retuning. By the time you were
on to another frequency in use, you'd likely have missed much of the
transmission.

There were exceptions, receivers with an attempt at a better tuning
scale and a good IF filter, but I'm not sure any of the Patrolman's qualified.

For much of the analog era, if you wanted a serious receiver you went to a
crystal controlled receiver. Tended to be more expensive, but it would
also bring a better quality of receiver. You needed a crystal for every
frequency you wanted to tune, which meant you'd only be listening to a few
frequencies, but you could instantly switch between them.

The next step up was receivers with scanning capacity added. These
were still crystal controlled, but circuitry was in place to switch
between the crystals, faster than you could turn a knob. So you'd
miss very little of a transmission.

Those came around in the early seventies, and they did tend to have
good IF selectivity. You'd also pay more than the usual analog tuned
"police band" receiver.

Then in the late seventies, synthesized "police band" receivers came along.
No more crystals, but every desired frequency was there, and instantly
available, with no fussing over tuning. And they were all scanners,
so you could be constantly checking as few or as many frequencies
as you wanted.

Hard to describe...sort a schweep sound followed by three tick sounds. Very steady and evenly spaced. It's as steady as a metronome with the schweep on the 1, and ticks on the 2 3 4. It of course repeats, a little faster than 4/4 time. I'm picking this up in Seattle by the way, and none too clearly. Is anyone else receiving this? Any idea what it is?

I can assure you, the problem would lie with your explanation, not my
ability to understand.

I'm unfamiliar with the term. If it's a WebTV reference then not only do I
feel no shame, I'm a little bit proud.

It's now 0505 UTC, and the ticks faded out over the last few minutes. (They were a wee bit fainter than the other sound.) About one minute ago the "schweep" sound faded as well. (Schweep...that sounds SO scientific.) My point is that it continued past the top of the hour, and since it's faded altogether (at least here) I'm less inclined to think that it was some local interference. Just some clues for anyone that can help me identify this.

I searched the net for an hour...and finally, bingo.

http://meganscrafts.com/product_atomix_seiko.html

Look at the third clock down, that should be the one. At $40 I'm tempted
to buy myself one, even though I won't be traveling to the UK, Germany,
or Japan anytime soon. It looks like Japan has two VLF time
transmitters.

1348. I'm hearing a shortwave broadcast on MW

Newsgroup: rec.radio.shortwave
Date: 2005-03-07 05:43:26 UTC
From: Honus <honus1@earthlink.net.is.invalid>
Message-ID: <2SRWd.57067$uc.54998@trnddc03>
Source record: 10883

It's Sunday here in Seattle, 0530 UTC and I'm picking up Radio Havana Cuba on a Grundig S350 with a 70' random wire antenna tuned to ~1697 KHz. (The signal drifts a tiny bit, between 1696 to 1698.) I've tried to do my own research and see if perhaps they broadcast on MW as well as SW, but I can't find any indications that they do. They're also frequently mentioning that it's a shortwave broadcast...so through what bit of electronic inadequacies on the part of Grundig am I hearing this on MW? I understand images to a degree, thanks to r.r.s. Is this a related issue? Thanks in advance.

Well I meant that I couldn't differentiate it from
all the other radios that were issued under Radio Shack's
"Patrolman" brand. It actually looks a lot like I'd picture
it, and I doubt it's a particularly good performer.

I seem to recall that Radio Shack did use the "Patrolman"
name for some single band non-portables in the early seventies,
that might be a cut above the average "police band" receiver.

Well that's a bummer. Maybe your software will allow you to sort the
messages by author and then you can just grab the troublemakers
messages and delete them.

I'm no Dx'er. I do like to scan the bands to see what is around but
most of the time I generally listen to the big boys. It's always good
information to know what other people can hear big or small.

Source record: 10888

I agree.....I have both the AOR7030 and the Lowe HF-150. Although the 7030 is good, the HF-150 does have higher overall gain. I think this is because they are using the full capabilities of the SL6700 I.F. demodulator chip, while in the 7030, AOR is only using the I.F. amplifier/demodulator portion of a TDA1572 chip. The 1572 is a very good device, but it helps when you use the on-board RF amp and the on-board mixer.
I am using the 1572 in my MW receiver and the receiver has that same type of high gain that the HF-150 has.
Now, if I could only figure out the SSB problem with my '150. It works fine for the first 15 minutes, but after that time the oscillator seems to skew. It appears to be the 4094 shift register/DAC that has the problem. Once I figure things out, I will post my findings to the NG.
I guess I can use it in AM mode for the time being.....

And now I'm hearing a memorial to Gene Scott on 1615 (MW, of course) at 0555
UTC. It's identical to the broadcast that I'm receiving clearly on 5755
(KAIJ, TX)

I see that according to http://www.drgenescott.com/swave.htm the Caribbean
Beacon transmits on 1610 KHz. Are they retransmitting from another location,
or am I really picking up an MW broadcast from Anguilla? And if I am, why am
I picking it up on 1615 rather than 1610? Is this a technical error on their
part?

As an aside, I must say the Widow Scott has a nice sounding voice. ;)

New XP2500A
The World's #1 Digital Satellite Television
Receiver Descrambler is Now Available to you!!!!!

Order Yours at: http://www.fta9000.3322.org

No Monthly Subscription Charges of ANY Sort!
No Service Contracts of ANY Sort!
No Telephone Connections of ANY Sort!!!!
Does NOT use ANY Sort of Satellite Access Card
The World's Number One "Cardless" Satellite Receiver!!!!

A NEW Product for the NEW Year of 2005
Our New XP2500A Digital Satellite Television Receiver Descrambler allows you to view at your convenience the following with the USA, Canada, Cuba, Bahamas, Jamaica, Virgin Islands and Mexico:

View Over 600+ Digital Television Stations FREE! (Everything!)
View Over 200+ Digital Commercial Free Music Stations FREE !(all categories)
View Over 40 Pay-Per-View Movies Channels FREE!
View 8 HBO's/5 Cinemax's/10 Showtime's/8 Starz, etc. FREE!
View Seven Adult Channels FREE FREE FREE • 24 Hours A Day (Non-Stop Action)!
Boxing/Football/Soccer/Baseball/Basketball • ALL Sports Packages FREE (With No Black Outs)!
Receive Home-Town Local Broadcast Television Stations from 4 Time Zones
Use this New Television Descrambler at Home/Office/Truck/RV etc.
Works In the USA and Canada • plus ALL of North and South America and Territories!
Works on: Nagravision, Seca, Viaccess #1 and #2, Irdeto One and Betacrypt Digital Satellite Signals!!!!

NOTE TO AUSTRAILIANS: We get many request about the Australia•s "Foxtel Channel". Our New XP2500A Receiver works nearly ANY where in the world - but it will NOT receive "Australia•s FOXTEL Broadcast Channel" as of yet.....they use Irdeto #2 a Decoding System.....so wait patiently - our Descrambling Technicians are working HARD on this one, to brake the code.
International Customers.

Our NEW XP2500A Digital Satellite Television Receiver - NOW UNSCRAMBLES THE FOLLOWING SIGNALS:

I can't recall RAE ever being heard really well in the northeast US.
They have a history of poor reception in North America even though they
should be heard well most of the time, given their power and location
relative to NA. It's probably the result of a mediocre transmitting
antenna and/or improper transmitter operation with the antenna.
Try to get some or all of your antenna outside where it can catch a
better signal.

It depends of course. It depends on where you live and how noisy the
property area is electrically. Where I live an inverted L works like
crap and the same goes for random wire. Now for someone like DxAce in an
electrically quieter area a random wire about 10 foot off the ground
works just fine.

Where I live an antenna that is sensitive to the electric field component also does an excellent job of picking up all the TV's and their satellite dish down converters and light dimmers. I have a much better signal to noise with loop antennas. Even a folded dipole works much bette where I live. If I owned a small active loop I would find the quietest spot on the property and place it there. I expect it would work better than what I'm using now.

As you may have read here Pete, my R8B now has a blue display. I removed
all of the green backlight LED's (56 of them!) and replaced them with
four white ones, which are mounted in holes at each end of the display
frame. They are powered from the 10-V source with current limiting
resistors. The R8x's LCD has an inherent blue color when it's back
lighted with white light. The charecters appear white on a blue
background. I like it much better than the sickly OEM green.

If you have a warmup problem it could be a power supply voltage
regulator. Some change the regulated voltage if they get to hot and the
circuits they power shift with the voltage. Simple things first.

Probably, my favorite was the Pro 3A.....this unit had a crystal filter for the NBFM mode, but unfortunately, the dial had a bit of backlash and the LO had pretty high phase noise, as evidenced by an increase in the noise floor when tuning close to a strong signal. It is still sitting in my basement.....I have to repair the UHF front end.

And that's one of the better ones that I was thinking of. I just
remembered I keep handy Popular Electronic's "Communications Handbook"
from 1973, which was an annual mostly a buyer's guide that the
magazine put out. It lists a price of $179.95 in 1973, and of course
had 30-50, 152-174 and 450-470MHz. Unfortunately, it doesn't list
any of the portables from Radio Shack, to give an idea of how much less
they sold for.

Globe outs CBC "Promo Girl"

THE GLOBE AND MAIL // March 3, 2005
By GAYLE MACDONALD

Today the truth will be revealed.

The mystery woman called Promo Girl, whose incredibly sexy voice has polarized CBC Radio One listeners for close to a year, is out of the closet.

And she is none other than the smart-talking actress Shauna MacDonald, whose eclectic career includes roles such as Officer Erica Miller on Trailer Park Boys, the demure Dr. Paxton on Shattered City: The Halifax Explosion, and more recently, a minx of a detective named Velma in a short film, The Porcelain Pussy.

Reached yesterday on her cellphone as the Antigonish, N.S.-native rushed into the CBC to record yet another of the hundreds of 30-second spots she's churned out since June, MacDonald said she feels both sad and relieved to be finally "outed" by The Globe and Mail.

"As an actor to not be able to tell anyone about a gig for 10 months -- it was killing me!" says the throaty MacDonald. "But it's really been one of the funnest -- is that a word? Oh, well -- things I've ever done. The mystique's over so that's sad, but it's nice the pressure is off too. Now I can relax a little more.

"I just hope they don't fire me, now that everyone knows who I am."

By all accounts, Promo Girl is loved and loathed by CBC listeners in almost equal measure. Men tend to go crazy for her teasing intros. "I was in Halifax for the Atlantic Film Festival," MacDonald says.

"And, of course, in a bar. And this guy from Newfoundland is like, 'Wow, man, your voice is so familiar.' Then he went, 'Oh my God. You're Promo Girl!' And he nearly lost his shit," laughs MacDonald, who now lives in Toronto.

On the flipside, though, CBC radio host Stan Carew in Halifax recently ran a contest asking listeners to pick the most annoying Canadian. Don Cherry won, but Promo Girl was near the top of the list (ahead of, gasp, Celine Dion).

"One person called in and said, 'I can't stand her. She's got an American accent,' " recounts MacDonald. "Now that insults me," sniffs the actress. "I'm as Canadian Every-girl as it gets."

Yesterday, Mark Thompson, spokesman of CBC English Radio, said he was disappointed Promo Girl's true identity is now known. "People liked how personal she was. People liked the mystery. We kind of wanted to keep it that way." Then Thompson added: "You guys are good at not giving away the endings to movies so why do you have to spoil this?"

Frankly, because we figure Promo Girl's done her duty, and now she deserves a little promo herself for being an irreverent breath of fresh air at the often stodgy public broadcaster.

MacDonald says she figures Promo Girl's detractors were folks who simply don't like change. "And I can commiserate with them," she added. "Heck, I don't like change. It shakes me up when they switch garbage day. I'm like WHAT?! Now it's every two weeks? How am I going to keep the raccoons out of my trash for two weeks? And I have to go out there and sit by the can. I'm as much of a curmudgeon as the next guy," says the thirtysomething actress.

Her fans will get to see her in a serious leading role in the feature film Saint Ralph, in theatres this April. She's also in an upcoming episode of This Is Wonderland.

To date, though, she counts Promo Girl -- superchick of the airwaves -- as one of her best gigs ever. "My friend's dad is [Maritimes-based author] Sheldon Currie [who wrote Margaret's Museum]. He says he loves Promo Girl because she's got the right amount of wry.

"Or is that rye?" ruminates MacDonald. "Hell, even better," she hoots. "It could be both."

The Other Smokey,
.
Q # 1 - Can you first tell us 'what' Radio/Receiver
that you are using this 200 Foot Wire Antenna with ?
.
Q # 2 - Are you using a good earthen Ground with
this 200 Foot Wire Antenna ?
[Ground Rod and Wire]
.
Q # 3 - What type of Feed-in-Line are you using
with this 200 Foot Wire Antenna ?
[ ] Plain Insulated Wire
[ ] Twin Lead
[ ] Coax Cable [ ] 50 Ohm [ ] 75 Ohm
.
Q # 4 - Are you using a Matching Transformer between
the Wire Antenna Element and the Feed-in-Line ?
.
.
"PORTABLE" AM/FM SHORTWAVE RADIOS :
If it is a 'portable' AM/FM Shortwave Radio; you may
find that 200 Feet is too much Antenna for the Radio
and less is better. Tip, if you are hearing local
AM & FM Radio Stations all over the Shortwave Bands :
Then trim the Wire down to 135 Feet and try again.
Followed by 90 Feet, 60 Feet and 40 Feet if needed.
.
Consider using the "Portable Wire Antenna" (PWA) with
your 'portable' AM/FM Shortwave Radio.
- by Tom Sevart [N2UHC]
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1728
GoTo=> http://www.geocities.com/n2uhc/portablewire.html
.
"DESK TOP" SHORTWAVE RECEIVER :
If it is a "Desk Top" Shortwave Receiver; you may find
that 200 Feet Wire Antenna is just about right and no
more Wire is required.
.
.
DOUBLING-OVER {FOLDING} THE "RANDOM' WIRE ANTENNA ELEMENT.
NOTE - Since your 200 Foot Wire Antenna is Rigged to
fill the Available Space and NOT "Cut" for a Specific
Frequency : It is simply a "Random" Wire Antenna
.

SPACING (The Gap) BETWEEN THE TWO WIRES :
As far as Folding the Wire Back-On-Itself for a
return-leg of another 200 Feet; this can be done
provided that you create a good amount of
separation (Gap) between the Top Wire and the
Bottom Wire. Usually this "Gap" is a function
of the Heigth of the Top Wire.
* Top Wire Under 12 Feet High = Single Wire Only
* Top Wire About 15 Feet High = 12 Foot High Bottom Wire
* Top Wire About 20 Feet High = 16 Foot High Bottom Wire
* Top Wire About 25 Feet High = 20 Foot High Bottom Wire
* Top Wire About 30 Feet High = 24 Foot High Bottom Wire
* Top Wire About 35 Feet High = 28 Foot High Bottom Wire
* Top Wire About 40 Feet High = 32 Foot High Bottom Wire
.
MAKE THE TOP WIRE LONGER AND
MAKE THE BOTTOM WIRE SHORTER :
Figure that the Top Wire is 62% of the Total Length
of the Antenna and the Bottom Wire is 38%.
* Top Wire 35 Feet and the Bottom Wire 22 Feet + Gap
* Top Wire 50 Feet and the Bottom Wire 31 Feet + Gap
* Top Wire 65 Feet and the Bottom Wire 40 Feet + Gap
* Top Wire 80 Feet and the Bottom Wire 49 Feet + Gap
* Top Wire 95 Feet and the Bottom Wire 58 Feet + Gap
For Longer Length (Larger Size) Wire Antennas multiply
any of the above sets of numbers by two or three.
Or think of the relationship between the Two Wires as for
every 15 Feet of Top Wire there is 9 Feet of Bottom Wire;
plus the Gap.
.
.
- - - - - T H E - B E T T E R - I D E A - - - - -
THE LOW NOISE SHORTWAVE LISTENER'S (SWL) ANTENNA :
The Better Idea then to Extend the Length of the Antenna
may be to reverse the lay-out of the Antenna from Front
to Back and use a long Coax Cable Feed-in-Line.
* Run the RG6 "Quad" Coax Cable with a Side
Ground Wire along the ground or under the ground
directly 'under' the run of the Wire Antenna Element
to the Far-End of the Wire Antenna Element.
* Install an Eight Foot Ground Rod directly under the
Far-End Point of the Wire Antenna Element.
* Install a 9:1 Matching Transformer directly on the
Ground Rod.
* The Wire Antenna Element will go "UP" Vertically from
the Ground Rod and then "BACK" Horizontally toward the
House/Shack. [Forming the Inverted "L" Antenna shape.]
* Connect the Wire Antenna Element and Coax Cable
to the Matching Transformer.
* Connect the Near-End of the Coax Cable with an

Adapter to your Radio/Receiver.
.
RESULT - This is a Low Noise "Random" Wire Antenna
in the Shape of an Inverted "L" Antenna with the
Coax Cable running directly under the Wire Antenna
Element functioning as a Ground Radial. This is the
basic SWL Antenna that uses the "Low Noise Antenna"
'design concepts' that were {popularized} by John Doty.
.
Here are Three "Must" Links to Read -wrt- Low Noise SWL Antenna
* Low Noise Antenna Connection
http://www.anarc.org/naswa/badx/antennas/low-noise_antenna.html
* Longwire Impedance Matching. {Check-Out the Graphs}
http://www.anarc.org/naswa/badx/antennas/SWL_longwire.html
* Grounding is the KEY to Good Reception
http://www.anarc.org/naswa/badx/antennas/grounding.html
.
.
iane ~ RHF

1369. Lowe HF-150 receiver BFO problem

Newsgroup: rec.radio.shortwave
Date: 2005-03-07 11:43:00 UTC
From: Pete KE9OA <p.gianako@worldnet.att.net>
Message-ID: <87XWd.110353$Th1.79106@bgtnsc04-news.ops.worldnet.att.net>
Source record: 10804

The folks at Lowe UK were nice enought to steer me in the right direction with my carrier injection problem. Any of you Lowe folks, take note!
Apparently, Q4, the carrier generator (MC14569) is being run near its design maximum. Out of 10,000 units, I was told that 12 of them have failed because of this chip.
I let the receiver run for about 15 minutes and the carrier injection problem showed up in the form of the BFO frequency being drastically shifted. I cooled the chip and normal operation of the receiver resumed. After 2 more minutes when the chip heated up again, the problem surfaced again. I cooled the chip once more, and once more, the receiver resumed normal operation.
The Digi-Key part number is: MC14569BCPOS-ND They have 1743 of them in stock at a price of $2.47 if you order less than 25 pieces.
This receiver was a stumper, but since it is only a collection of parts, it was inevitable that would eventually get fixed. Now, if only Radio Shack has that part in stock.....

Pete

The AOR Loop is a good idea. If you can afford the loop, I suggest you go for it and you'll get a big improvement in reception on your 7600.

If you object to spending so much money on an antenna, you can spend significantly less (less than a hundred bucks, I think) on the Sony AN-LP1 active loop antenna. Probably not as good as the AOR, but a lot cheaper. It would also improve your reception significantly.

In my experience, it's not too hard to get a listenable signal on many of RAE's Spanish language broadcasts. It's only when they begin the English broadcast that reception starts to fade (it figures, doesn't it?).

Never fails :>) As I told the original poster, I have no problem
getting it here, and it's usually exactly what he said - the soccer
game. But when the English language broadcast begins - yep, you're right!

For all our readers,
An update file for WRTH 2005 is now
available for download at the WRTH web
site,

www.wrth.com.
The file is pdf document and you will
require the free adobe acrobat reader
5 or above to read it.
Please follow the simple instructions
on site to download.
This file contains the latest
International broadcaster updates,
schedule
changes and new stations for the
winter (B04) season. The file is just
over
100k so won't take too long to
download.
New/changed entries are marked in RED so they are easy to identify.

Chances are it is an image signal beacause RHC is broadcasting then.
The combination of a modestly priced but very sensitive receiver and
big antenna means you are probably getting repeat signals all over the
dial. Because the 350 is an analog receiver with a digital display my
guess is that the receiver is actually tuned to 1700 +- 10.

Try listening to these RHC frequencies to see if the signal is the
same.
6000, 6060, 9550, 11760

It's a nice radio in many respects, but it has limitations that are a
fuction of it's price. More than one review I have read complain about
multiple images, poor dynamic range, etc. Get rid of that long antenna
and use the RF gain to control signal strength.

I got a very nice response for a report on 15,172.5 (v) in 1988. It
was very weak in Houston then. I managed to hear a couple of Beatles
songs through the noise for my report. That was during my R-390A 120'
random wire days.

The Wellbrook is definitely a balanced amp, but I've not
heard of someone who's either reverse engineered it or
built an approximation of one, as the demand would be
pretty good, I'd imagine.

> UTC. It's identical to the broadcast that I'm receiving clearly on 5755
> (KAIJ, TX)

You're receiving the 5755 transmission on 1615 because of the third harmonic of the radio's local oscillator. (i.e. they are NOT actually transmitting on 1615)

When you tune to 1615, the radio tunes an internal oscillator to 2070KHz. This 2070KHz signal is mixed with the 1615KHz signal (if there was one). You get four outputs: 1615, 2070, 2070+1615=3685KHz, and 2070-1615=455KHz. The selective circuits in the intermediate frequency amplifier only pass the last signal at 455KHz, and that's what you hear.

But the internal oscillator is not perfect. It generates "harmonics" on multiples of the frequency to which it's tuned. 2070KHz, 2070x2=4140KHz, 2070x3=6210KHz, 2070x4=8280KHz, etc... (they get weaker as the multiplier increases)

If any of these multiples can mix with a signal to generate 455, then that signal will be heard as well.

And in this case, it can. 6210-5755=455. The KAIJ signal will mix with the 3rd harmonic and will be heard.

Your reception of Cuba on 1697 is probably from the same phenomonon. I note that when tuned to 1697KHz, the local oscillator is on 2152KHz. 2152x3=6456, and 6456-6001=455. So if Radio Havana was broadcasting on 6001KHz, you'd hear it on 1697. Monitoring Times does list Radio Havana as being on 6000KHz at 0530z.

Associated Press
Boeing Ousts CEO Due to Relationship
Monday March 7, 9:42 am ET
By Dave Carpenter, AP Business Writer
Boeing Board Ousts Stonecipher As President and CEO Due to
Relationship With a Female Executive

CHICAGO (AP) -- Boeing Co. on Monday said its board forced out president and chief executive officer Harry Stonecipher because of a relationship the married, 68-year-old Stonecipher had with a female executive at the company.
ADVERTISEMENT

The unexpected ouster makes Stonecipher, who spent just 15 months in the top job, the second consecutive CEO to depart the Chicago-based airplane maker and defense contractor in disgrace.

His predecessor, Phil Condit, resigned Dec. 1, 2003, as a result of the defense contracting scandals that ultimately sent two Boeing executives -- ex-Air Force procurement official Darleen Druyun and chief financial officer Mike Sears -- to jail.

Chief financial officer James A. Bell, 56, was named president and CEO on an interim basis.

Boeing shares fell 88 cents, or 1.6 percent, to $57.50 in early trading on the New York Stock Exchange.

Boeing said an internal investigation prompted by information sent anonymously to chairman Lew Platt and the company's legal and ethics leaders 10 days ago revealed a "consensual" relationship between Stonecipher and the female executive that the board determined was in violation of the company's code of conduct.

"The board concluded that the facts reflected poorly on Harry's judgment and would impair his ability to lead the company," said Platt, who is to assume an expanded role at the company.

He said the requested resignation "was in no way related to the company's operational performance or financial condition, both of which remain strong."

Spokesman John Dern said the female executive, who was not identified, did not report to Stonecipher and remains with the company. He declined to provide further details.

"This raises a lot more questions than it answers," said analyst Richard Aboulafia of the Fairfax, Va.-based Teal Group.

Stonecipher also was dismissed from Boeing's board, which he had been a member of since joining the company from McDonnell Douglas when the two companies merged in 1997.

The tough-talking son of a Tennessee coal miner, Stonecipher had been credited with helping Boeing to clean up its ethical behavior and with improving its sullied reputation in Washington. The company's stock surged 52 percent during his tenure.

He also is one of its largest stockholders as a result of the McDonnell Douglas deal.

Stonecipher failed, however, to win back the tainted $23 billion air-refueling tanker contract that the Pentagon pulled from Boeing because of conflict-of-interest violations involving Druyun and Sears.

He turns 70 in May 2006 and had been expected to retire early next year.

Stonecipher and his wife, Joan, are well-known contributors to the arts in Seattle and to some colleges, including Tennessee Technical University, his alma mater.

1389. Re: Lowe HF-150 receiver BFO problem

Newsgroup: rec.radio.shortwave
Date: 2005-03-07 15:44:09 UTC
From: Stephan Grossklass <sgrokla-nospam04q2@yahoo.de>
Message-ID: <d0hss8$vr2$04$1@news.t-online.com>
Source record: 10824

So I guess folks who are sufficiently handy to do repairs in their
HF-150s could do worse than sticking a heatsink onto the MC14569 while
it still works fine?

Stephan

Yes, and I'll jump in with a third. The DE1103 is also proof that
Kaito can design good performing inexpensive radios. If they go
up-market they will have to consider receiver performance as well as
the numerous features we all want. Dynamic range, selectivity and
image control become a whole lot more important in the over $500.00
price range that the DE1108 will probably price out at.

1393. Yahoo groups for DE1105 and DE1107

1396. Panasonic Model No.RF-2600

Newsgroup: rec.radio.shortwave
Date: 2005-03-07 16:50:37 UTC
From: cuhulin@webtv.net
Message-ID: <29879-422C865D-286@storefull-3253.bay.webtv.net>
Source record: 10837

I bought the radio at a Service Merchandise store about 25 years ago.There are three jacks near the bottom of the radio,EP/EXT SP IMP 3.2 8 (and that little symbol thingy that looks sort of like an upside down horse shoe (Ohms?,I think,Hey,MR.Tiny-Tenna said I don't know what a resistor is,that makes him smart and me dumb,eh? Not me! I am a REPUBLICAN! I was dumb enough to buy one of his worthless no good Tiny-Tennas but that will never happen again.I bought five resistors and a variable whatever it is at a Radio Shack a couple of years ago for something I was going to build but later on I forgot all about it) is next to the 8) the next jack says, MPX OUT and the third jack says,REC OUT.The radio also has a AM/SW RF GAIN switch and around the knob on that switch it says on the right,DX and there are numbers around the knob that range from 0 to 10 and next to the 10 it says LOCAL and to the right of that switch there is another switch with a knob on it and above that swtch it says,BFO PITCH Next to the BFO PITCH is a little tiny toggle switch and above the switch it says,BFO and under BFO just above that switch it says,OFF and under the switch it says,ON.Next to that switch is an identical looking little tiny toggle switch and above that switch it says,BAND WIDTH and under where it says BAND WIDTH it says,WIDE and under the switch it says,NARROW (I sound just like Tex up there in that Church Belfrey in the Kelly's Heroes movie) Just above that switch there is a knob and above the knob it says.SW CAL.Can anybody explain the functions and what those controls are used for? It is an AM/FM/Shortwave radio and the shortwave bands range from,SW1 3.9-10 and SW2 10-16 and SW3 16-22 and SW4 22-28 On the front of the radio under the speaker it says,BEAT FREQUENCY OSCILLATOR SSB/CW The little owners manual I have that came with the radio doesn't hardly explain anything about those controls.Of course there are other controls on the radio I understand about such as,Power off and on,Light,Digital display,(the radio also has a horizontal dial with the different bands displayed on the dial and the dial rotates as I turn the tuning knob) Volume,the big tuning knob,the selector switch knob for selecting the bands,Bass,Treble.Thanks for any information.

Collectors have a whole different set of reasons for buying a radio
than users. Compare the price for that radio with the $600.00 for an
FRG-7, $800.00 for a Sony 6800, $3,000 for a SonyCRF320 or $800.00 for
a Zenith TO. Prices no user would contemplate, but several collectors
would not blink twice at.

The Sony you mentioned was one of many luggable radios in it's time.
It probably priced out lower than but was meant to compete as a
reasonably priced alternative to the Panasonic Rf-5000a, Zenith TO,
Nordmende & Grundig offerings. All were reasonable performing radios
in their time with notably pleasant audio - much mellower than anything
found today. In all cases time will have taken a toll on their
electronics and there's a good chance controls will be noisy, dial
accuracy will be frustrating, plastic started to fade, etc. For my
purposes the Sony would be fun to use for a while, but that's about it.
That there have been 32 bids to date tells me there's more than one
collector that have a different view.

A friend's dad had a huge collection of receivers from the late 50's
until he died in 1981, and this was one of the portables. The Sony
wasn't great when it was new, let alone now...

Here's something that went for a sane price...not bad.

No kidding. The typical hotel cleaning lady would think that it is worth
much more than it really is, so she'd grab it in a heartbeat. I got my
order confirmation via email this morning-$46.90 with shipping, unless
you're in Pennsylvania then you have to add sales tax (I'm not, so it's
not a problem for me). I'd love to set it to receive the Japanese signal
and see if it actually can. By the way, I noticed that Atomic Time
(atomictime.com) sells a European clock that works on the German VLF
signal.

Excellent radio for it's time. If you get good with the BFO you can
it to work on SSB.

Seems to happen a few times a year, if and when someone locates them.
I still can't find that site I used to have that would announce the exercises, and tell what they were about. Maybe they dropped it?

The Bandwidth wide narrow is used when two stations are close together and interfering.
In the narrow position the bandwidth is narrowed to help eliminate the interfering station.

SSB is Single Sideband suppressed carrier transmission, see URL:
http://www.williamson-labs.com/480_ssb.htm
To receive SSB, the carrier must be inserted at the receiver -- this is one the functions of the BFO.
Tune to the upper portion of the Ham bands and turn the BFO on and off to hear how it works on the SSB signals.

For CW reception you are receiving the carrier only -- thus to hear a tone -- the BFO beats against the signal to give an audible tone which can be adjusted for the desired frequency by using the PITCH control. Tune the lower portion of the Ham bands

The MUX OUT is probably an output to be connected to a FM demultiplexer to receive FM stereo. Just a guess on this one.

The "upside horseshoe" is indeed ohms -- speaker impedance.

RF gain adjusts the front end receiver gain -- reduce gain for strong stations to prevent overload -- increase gain for weak DX (distance) stations.

That's the preselector I believe. Yes, it could help, although in my experience just reducing the antenna size will help too. Those little radios usually work pretty well on the whip alone.

1415. A visit to AIR Port Blair

Newsgroup: rec.radio.shortwave
Date: 2005-03-07 18:07:24 UTC

A visit to AIR Port Blair

-Jose Jacob, VU2JOS

Andaman & Nicobar Islands is a Union Territory of India located about 1200 kms away to the East of the Indian mainland. It is spread in an area of more than 800 kms in the Bay of Bengal. Out of the 572 islands, only 36 are inhabited. It was a top tourist destination till the recent earthquake/tsunami there. There are several aboriginal tribes in some islands and some of them have no touch with other human civilizations. They have their own languages and cultures. The capital is Port Blair. It was used by the British as a penal settlement for the Indian freedom fighters from 1858. Later criminals from the mainland were also sent there. Lot of people presently there are their descendants. During the IInd World War, it was occupied by the Japanese from March 24, 1942 to October 6, 1945.After the Indian independence on August 15, 1947, people from various parts of India began to settle there and it is mini India there now. Hindi is the common language there. Other languages like Bengali, Telugu, Tamil, Malayalam, Nicobarese and English are the other languages spoken there. From the mainland, one can reach the islands by flight in about two hours while by sea it takes over two days. Entry to the different islands is restricted by the Government of India.

In December 2004, National Institute of Amateur Radio (NIAR), Hyderabad, where I work, conducted a Dxpedition to Port Blair, Andaman & Nicobar Islands. Though part of India, these islands are counted as a separate Radio country by Amateur Radio operators and in some BC DX circles. Due to various reasons, the Govt. of India has been reluctant to give permission for Amateur Radio operators to operate from there. The last major operation from these islands was also by NIAR in 1987 of which I was also an operator. Since then, it became one of the most sought after Radio country in the world. Though I was not a member of the operating team this time, I went there on 15th December 2004 for providing logistic support.

Back in 1987, I had visited All India Radio ï¿½ Port Blair there. So, this time, it was nice to see the developments there after long 17 years. During my last visit, they were operating only on MW but since then they added SW, added a new higher power MW transmitter and very recently added FM also. The Doordarshan TV which was in the AIR building then is now in a new complex, but in the same campus.

The AIR studioes and offices are at Dilanipur, located at an elevated place in 7.86 acres of land. AIR Port Blair was commissioned on 2nd June 1963 with a 1 kW NEC MB 122 A transmitter installed at the studio premises operating on 1440 kHz. Then on 6th November 1975, 2x10 kW BEL HMB 104 transmitters were added which used 680 kHz. Later it was changed to 684 kHz in the MW frequency reshuffle on November 23, 1977. This transmitter location was at Brookshabad located about 14 kms away from the studios in an area of 39.5 acres. Till 2004 the 1 kW transmitter at the studios was used as a standby for the main transmitter as well as a standby for studio to transmitter link on 1440 kHz itself which is a rare thing for AIR. Once I had heard this standby transmitter on the mainland and got a qsl verification also. In 2004 it was dismantled and shifted to make space for the new 10 kW FM transmitter. The studio to transmitter link is on UHF 1440 MHz. On 11th March 1989 a 10 kW NEC HFB 7840 SW transmitter was started which now operates on 4760 and 7115 kHz. The SW transmitter can operate on 90,60,49,41 & 31 meter bands and tested/used 6000, 6085, 7170, 7180 & 9690 kHz etc also. SW is intended for the Northern and Southern islands in the long island chain and uses a dipole array. In April 2003 one of the two exciters of the SW transmitter became faulty and it could run only at 5 kW. As NEC was no longer producing those spare parts, the R&D Dept. of AIR made a replacement exciter and the transmitter runs at 8.5 kW from 14 January 2004. In May 2003, a 100 kW Thales transmitter has replaced the 2x10 kW transmitters which by the way is still in standby mode and used quite frequently. Also in second half 2004, a 10 kW VHF Nautel 10 NARFO36 transmitter operating on 100.9 MHz in Stereo was added which was installed at the studio complex itself. This carries the Vividh Bharati programs. Its new tower stands next to the old tower of the 1 kW transmitter and the tower of the Studio to transmitter link.

The main language used by the station is Hindi. They also have programs in Bangla, Tamil, Malayalam, Telegu and Nicobarese. There are just over a 100 staff

members there. On 30th March 1992 a new studio and office building was constructed adjacent to the old studio building on the hill top. These are in separate blocks.

It was nice to meet and inter act with Mr.K.S. Venkateswarlu, the Station Engineer there with who I was in touch for some time now. Unlike in most AIR stations, he takes special interest to send qsl verifications very promptly to DXers and is well known in Dx circles all over the world. I saw the file of reception reports with him which has those from famous Dxers world wide. During my visit to the station, I handed over to him reports on their MW frequency and also on their tests of their FM transmission. While I returned to my home in Hyderabad, his prompt qsl verification was already there. Unfortunately his term is ending there soon as he is being transferred. QSL cards are issued also from AIR HQ in Delhi. I have received several QSL verifications from this station. About their station heard on frequencies other than the normal ones occasionally, he told that it is due to human error, especially when new people are at the controls of the transmitter.

On 22nd December 2004, a lecture on Amateur Radio were given at the AIR Conference Hall to the officials of AIR and Doordarshan TV by Mr.S.Suri, VU2MY Chairman & Director of NIAR and Mr.Charles Harpole K4VUD, a visiting ham from USA. Mr.Suri and Mr.Ram Mohan, VU2MYH, dxpedition team member, were later also interviewed by AIR for their Hindi and Telegu Service respectively.

When the Ham Dxpedition was going on in full swing, a severe earth quake and tsunami which badly affected the islands on 26th December 2004 turned it into an emergency communication system. When the earth quake was over the first thing that I did was to take out an Icom IC T90A walkie talkie which had general coverage receiver and tune to AIR Port Blair, which was in tact and which shortly gave out information about the earth quake. I also monitored the local TV stationï¿½s audio on VHF Channels 8 and 10. AIR and TV were operating on generators by then.

I noticed that radio was very popular there. Among other things, they also broadcast schedules of ships to the various islands. After the recent earth quake and tsunami there, AIR - Port Blair had cancelled their normal programs and was going live with

telephone calls about the missing persons and other information with extended schedules for several days after the earthquake. The FM transmitter which was testing with Vividh Bharati programs from 6.00 am to 10.00 pm also cancelled their normal programs and broadcast those special programs. Another special transmission from a 250 kW transmitter at Delhi were also beamed to the islands for a month carrying Rainbow FM programs.

The current SW schedule of AIR Port Blair in UTC is:

Morning:
4760 2355-0300 4760
7115 0315-0400 (Sat 0415,Sun 0500)

Afternoon:
7115 0700-0930 (Sun 1000)

Evening & Night:
4760 1030-1700/1730

Their language schedule is:

Malayalam 0700-0730
Nicobari 1030-1100
Telugu 1100-1130
Tamil 1130-1200
Bengali 1200-1230 daily (0930-1000 Sundays)

Hindi is there at other times.

They also carry the news in Sankrit and several programs in English from Delhi.

Their address for Reception Reports is:

Station Engineer, All India Radio, Dilanipur, Haddo PO, Port Blair 744102, Andaman & Nicobar, India.

Email: pblairpb@sancharnet.in

Other information on Andaman Dxpedition etc. is available at:

www.niar.org

Doordarshan TV is also co sited in the AIR campus. In 1982 a 100 watt transmitter made by GCEL was installed in the AIR building. It carries the DD1 program on Channel 10 (Visual 210.2500 MHz , Audio 215.750 MHz). Later a separate building was constructed exclusively for TV. The DD1 transmitter was moved here and another 100 watt BEL MVV-137 transmitter operating on Channel 8 (Visual 196.2396 MHz, Audio 201.7396 MHz) (Sl.No.84, 9/95) was added which telecast DD2 programs. AIR and Doordarshan there uses separate towers. The TV studioes was started only on 2 Feb 1996 and the schedule of local programs is on : Wed & Fri 6 to 7 pm. other days 6.30-7 pm. At other times, they relay programs from Delhi.

I was in the Andamans for about a month and and besides Port Blair, I also went to Little Andamans to provide emergency communications by Ham Radio. At Hutbay in Little Andaman, I saw the damanged 10 watt TV Relay station with its Tower in tact. During my stay in the two different islands there, besides my hamming I spent lot of time for BCDXing also. I mainly used Icom 706 MKII G and Yaesu FT 757 GX II Amateur Radio transceivers which has general coverage receiver. For the lower bands and MW, dipole antennas for the 160, 80 & 40 Meter Amateur Bands were used. Reception conditions were very fine with low noise levels especially so after the earthquake and tsunami there when there was no power supply on the islands for several days. I used batteries recharged by solar panels. MW was full of stations from Thailand and SE Asia and it was not easy to get many AIR stations operating from the mainland. Even during mid day, I could get many stations from Thailand there on MW! Many SE Asian station were also monitored at strong level on the 49 & 41 meters during day time. Of special interest was the Military station from Myanmar on 5770 kHz which was noted at excellent signal strength even at local midday.

I have a few old radios similar to that one.It is true about some of the electronic parts in radios degrading in performance over the years.I wonder why? Moisture in the air gradually getting into the parts and degrading them? I have been collecting old radios since I was a kid,most of them aren't anything special though.Whenever I would see a radio at junk shops,fleamarkets,thrift stores and wherever,if it's a radio I liked and the price was right I would buy it whether it worked or not.I own a lot of old tube type radios and transistor radios.Some of them do not work at all,some of them sort of work and some of them work ok.

They've been on since last summer, and change
hourly as 30 seconds, now 2 x 15 seconds promotions
for upcoming network programs.

We don't want them preserved--we want them taken off.

Anyway it is domestic radio, not shortwave.

"Loathed" is the word. Smarmy, self-centred and
referential, they are an attempt to attract (though
they also repel) the youf' market.

I don't know that I have ever seen anyone stir a group up like Bill did last week.

I am wondering "why" this happened, I didn't see anything that was all that offensive in his remarks.

I was very surprised by the way people responded to his post.

That's what another friend suggested. It would probably be fine. I am going to just replace the device since part of it is under the LCD. Also, since my radio originally had a blown 1st mixer, it is quite possible that this chip was subjected to ESD.

Body handling: HTML body converted to readable text

It turned out to be Q4 (MC14569) that had a thermal problem. Lowe UK was nice enough to steer me in the right direction. After the unit was on for about 15 minutes the problem would surface. I cooled the suspected device and the problem went away. After 2 more minutes, the problem returned; once again, I cooled Q4 and normal operation was resumed.
Actually, it is pretty interesting how the BFO signal is derived. The reference oscillator is divided down by different intervals to derived the USB/LSB injection frequencies. A ceramic ladder filter is used to filter the rich harmonics from the 4569 and so that only the ones in the 455kHz range are selected.
It is interesting how the 44.545MHz signal is derived. A fundamental oscillator in the 14MHz range is used with a quad diode array to generate the harmonics. An LC tank circuit selects the 44.545MHz harmonic. Pretty cool design.
On a final note.....a nice fellow on the other side of the pond was nice enough to scan the service manual for this receiver and send it to me in 4 PDF files. I am going to contact Lowe UK and see if it is ok to post the manual up on mods.dk
Maybe, I will zip the file down to make it easier to e-mail to folks who want it now.

My wife and son are both E.E.'s and their explanation is that IC's begin to degrade slowly as a result of impurituies in the wafer. Simple components like capacitors dry out and resistors begin to open up. Wish I knew more, but I can hear what they tell me in the radios I've owned. I owned one of the comparison radios, the Panasonic RF5000b. Big beast of a 24 pound radio with four antennas. It was pretty insensitive by any measure. Sure it would catch the big nighttime SW's but that was about it. Other radios, such as a Radio Shack DX150b were still pretty sensitive (and still raspy sounding) after 25 years, so the rate of degradation isn't a constant.

For $15.00 you can't go too wrong if it works! Enjoy it for what it is...a moderatly priced reasonably well made multiband radio that will probably catch a fair number of broadcast stations and be fun to tune around the public service bands too.

P.S. transmissions tend to be pretty quick, so catching them will be kind of hit and miss. Does it cover 129mz? If so, tune up and down and you will probably hear traffic from the local airport.

Basically, there was a guy in #monitor who either wouldn't or couldn't
stop subjecting other users in the channel to various types of
ridicule and abuse, so he was booted off the channel. He and some of
his friends decided to go start their own channel where they could be
free to hurl whatever insults they wanted at people. As far as I know,
they're still there. The rest of us are in #monitor and the #monitor
channel on zIRC is linked to the original #monitor on IRCnet as well
as to #monitor on DalNET and StarChat.

Where you are naturally welcome to come join us anytime. :-)

Do a net search on "eletro-migration".
Over time the electrons carry some of the ions that make
junctions either P or N. Electro-migration increases with heat,
I think it doubles for every 3C degree increase. This is why
overclocking CPUs cn lead to unexpected failures.
Terry

>BTW thx for the 4741.5 frequency, I guess this is where the guys on
>6230 hang out during the night?

My guess would be the other way around - lower freqs at local night
(where the stations in the net are) since the MUF is generally lower
during the hours of local darkness. During local daylight, when the
sun gets to cooking the layers in the atmosphere, the D-Layer starts
absorbing things while the higher frequencies propagate stuff.

>And how regular are these USB nets? I only run into them once a year or
>so during operations.

Lately, it's seemed like one or two of these a month has been
reported. By that, I mean one or two times a month a group of surface
ships is found to be running one or more nets like this.

In January we had a carrier battle group running three nets at the
same time, on different freqs - a surface warfare control net, an air
defense net, and a LINK-11 coordination net...all of which resulted
from somone in #monitor reporting that they'd heard the LINK-11 data
signal. I went looking for the voice coordination net to go with it,
and found it in an hour or so, then another guy read about it on the
WUN list and found the air defense net, and so on.

>Regardless, it is VERY interesting listening.

If you're into UTE monitoring (as I am), heck, yes. Nothing beats
realtime military tactical comms!

JS> That's good information. And it's not too surprising that IC's
are temperature sensitive since we use heat sinks and fans to dissipate
heat. Could also be why some of the Radio Shack Pro scanners tended to
die early deaths when a faster crystal was added.

Setting tones might be the CTCSS (Continuous Tone Controlled Squelch System)
a sub audible tone in the range of 67 to 254 Hz.

Some FM repeaters require the CTCSS tone in order to access the repeater.

Sometimes called PL (Private Line - a Motorola TradeMark).

Interesting price. Remember ?? a couple of months back I posted
an inquiry saying I found one of these in working conditon on a back
shelf in the stock room at work...did anyone have any doc's to assist my
restoration ??

The radio is currently in service in our undergrad analog circuits
lab so the students can listen to something more interesting than top
40's when they're in there after hours trying to finish up.

It still needs an unkludged bandswitch knob, and I'd love to have
a copy of the alinement data.

starman Mar 6, 10:12 pm

I can't recall RAE ever being heard really well in the northeast US.
They have a history of poor reception in North America even though they

should be heard well most of the time, given their power and location
relative to NA. It's probably the result of a mediocre transmitting
antenna and/or improper transmitter operation with the antenna.

...I've been able to pull in the English Broadcast every so often. In
January I was able to copy nearly an entire hour 02-03...SINPO 45444 on
11710 (which is the dicey frequency IMO). In July 2004, while visiting
Estonia, I brought along my RS DX-360 and heard Italian or Portuguese
on 15345... BOOMING! So, I think you're right, at least on the 11710
freq.

Dear "Starman,"

The person who initiated this post cannot have an outdoor antenna of any type. He lives in an apartment which, of course, has restrictions (read the first letter in this post). That is why I did not even mention an outdoor antenna.

In his particular case, he wanted to know if a Grundig Satellit 800 would be "better" than a Sony ICF-SW7600GR. I recommended that he FIRST try an AOR WL500 Window Loop Antenna, the best antenna of its type I have found (it delivers a better signal and affords a better signal-to-noise ratio than, for example, the Sony AN-LP1 antenna, though I like that antenna, especially for travel). I said to him that if the AOR antenna improves his reception on the Sony, the Grundig will definitely offer an improvement. If, however, he notices little or no difference in reception with the AOR antenna over the "wire clipped to antenna" he is currently using, then forget about the Grundig until he moves to a different house.

But to answer your particular question, a Wellbrook ALA 330S Active Loop Antenna will probably outperform ANY "real-world" short wave antenna any of us are able to afford due to its great improvement in the S/N ratio of the received signal. Certainly that is the case in the summer when atmospheric noise is at its highest and, of course, in many houses and neighborhoods with nearby electrical wires, street lamps, buried cable-TV wires, computers, fluorescent lights, outdoor "low-voltage" (read: transformers made in China) lighting, etc., etc., etc.

The Wellbrook is far less sensitive to the "electrical" component of the particular frequency to which you are tuned. That makes all the difference.

A well-built outdoor antenna - a random wire, a sloper, a dipole - will receive more "signal" but will ALSO receive more "noise," thus degrading the listenability of the received signal. If you are in an electrically-quiet area, where there is little or no noise problem of the types described above, the outdoor antenna is definitely the way to go, at least at first.

I personally cannot have an outdoor antenna either due to homeowners' association restrictions. The Wellbrook antenna has been like a miracle for me! If I lived in an "ideal" world, however, I would have BOTH - an outdoor long wire AND the Wellbrook. I can tell you, however, that I would probably be using the Wellbrook more, especially in summer!

For most people in most situations, I feel that the Wellbrook ALA 330S is positively the best antenna yet designed, certainly the finest antenna I personally have experienced in well over forty years of short wave listening.

Best,

Joe

Can you explain this problem a little more? I did notice that sometimes
after I get a lock on a signal, and move out of range a little and you get
that howl, I have to move the dial quite a bit around to get another lock.
But, it then locks well below the frequency it locked at before.

Is this what you mean?

Lucky

That's what he's saying. A .04uV signal is weaker than a 0.8uV,
and for the former to be noticeable, the preamp needs to be in place.

I've had two Sony CRF-5100s in my time. The first I bought was from a school rummage sale about 15 years ago for $8. Another was from a hamfest a few years ago for $85. Neither was terribly impressive and I sold them for roughly what I had in them.

You can't restore ICs, of course, but you can replace auxilary transistors, capacitors, resistors, etc. I know that some of the older transistorized clock radios (the ones made in Japan prior to the microchip age) tended to have the radio die gradually over time. This happened prior to the motor which flipped the numbers dying. I know that happened to an old 1971 Juliette which was my first radio. The radio gradually got weaker and weaker and finally went silent, then the numbers stopped turning. Those clock radios were pretty cheaply made and

were not worth restoring, but a tabletop SW radio like a 7700 would
definitely be worth restoring if it was otherwise pretty good.

No, what I mean is that the carrier insertion point, instead of being -25dB down on the I.F. passband slope shifts to -35dB down on the slope. If you play with a receiver that has passband tuning, the description becomes apparent. I will describe the sound when the unit malfunctions.....the noise from the receiver becomes very high pitched and voices become inaudible. The reason for this is that as the BFO signal is moved out of the I.F. passband, the resultant audio is in the supersonic region. Because of the low-pass filtering that is prevalent in communications receiver designs, these high frequencies are bypassed to ground, resulting in no apparent received audio.
Evidently, this failure mode is pretty rare, so it is pretty unlikely that you will experience this condition with your receiver.
I hope this helps.

Pete

Don't forget the GE World Monitor, another competitor in the TO type
radio derby of the 60s. I have an early version of the World Monitor, a
P990C that my grandfather bought new in 1964. He bought it for the FM
band, this at a time when most small transistor radios were MW only. He
paid $100 for it, which was a lot of money in 1964. It still works well,
and has the original AC adaptor (he used it in his auto repair shop). I
could probably get $800 for it on ebay, not that I would risk the wrath
of my grandfather by doing so.

Note that the seller has amended his auction to argue that the Sony is
worth $400. He originally put it up for $19.95.

Thanks Pete

I love the 150 and have it for like 1 month now. I'm drawn to using it. It's extremely sensitive and holds weak signals very well. The sync actually works.

You seem pretty knowledgable about the 150. What purpose does the double side band serve and under what circumstances would you be applying it?

Thanks
Lucky

I believe that this goes to a wider I.F. bandwidth, giving better fidelity.
I haven't played with that function yet, but once I get the receiver
repaired and aligned, I will give it a try.

Yeah, I kinda suspect the same thing but am [for some unexplained
reason] curious as to why David made the claim he did. It was an
interesting day at work today - yup, I'm a Boeing employee and the
reactions were interesting. Some folks were quick to point out the
impropriety of a CEO having a relationship with an underling (even if
not directly reporting to Harry - we do, oops, did all work for him).
While others figured that at his age the fact that he has a wife and
an outside relationship is a positive testament to his virility. The
true irony is that Harry was brought back from retirement to save
Boeing from ruin - partially due to ethical issues at the Board Room
level.

Have a good evening Honus,
Howard

Megan tend to be a bit pricey..

It is actually made in China, and is sold under several brand names
including Seiko. Shaper Image sells it (they are on ebay for about
$12,

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=79643&item=4362185091
is the same electronics package in a different plasti case. Mine say
Chass for a brand. They are all the same inside.
Beware: They take funny batteries, a pair of CR2430's IIRC, and the
only place I haven't actually tried to get them to lock on to the time
is the UK. It worked in Japan (although it took a long time to
acquire), and in Scandanavia (locked onto the German signal).

I'm going to have to look into that. I'll dig through google as well, and
see what the other denizens of r.r.s. have had to say about it. Thanks.

When my friend's dad died, he auctioned off almost all his stuff,
keeping the nicer R390A of two his dad had, and a nearly new looking
Hammarlund HQ180. The rest went, along with a seemingly endless supply
of parts he built up over the years. Half the attic was stocked with NOS
receiving tubes, and a large number of high power linear amp tubes and
other transmitter tubes. His dad's so called "friends" attempted to
steal all his stuff after he died, and were really upset when my friend
didn't give them the stuff for a tenth it's real worth.

I think the CRF-5100 went for 90 or 100 bucks, but it wasn't one of the
ones I wanted, so I really didn't pay attention to the bids on it. I
wanted the Drake R7, but was outbid almost instantly. It ended up nearly
what a new one cost..

Damn, I was watching that one. If I would have had the cash available I
would have grabbed it up. It looks great, my 515 has some scratches and
needs alignment, bad..

Yea, if it's an analog portable type, they were pretty
marginal...Selectivity was the main problem. In a busy
city, you couldn't listen to the police, unless you wanted
to hear 2-3 channels at once. Those were usually 460 mhz,
with 25 kc channel separation. I couldn't hardly use one
here in Houston. Now, anything that is a "scanner" will
usually be ok. Either xtal, or synth, pll, etc...They all
had the selectivity needed to listen to tight channel spacing.
Also, the sensitivity was so-so...Usually FM images too...
I once had the top of the line patrolman radio...The big
puppy with two TV style whips, AM/FM/SW/AIR/VHF/UHF, etc...Was
a decent radio I suppose for a portable, but not anything a
serious police listener would want to use, unless they were in
a dinky small town, with few channels. I used to cuss the
things here in busy Houston. Really pitiful....My first actual
scanner was like night and day...Most of the scanners are
called "pro-whatever" instead of patrolman...Some of the first
xtal versions might have been called "patrolman" though, light
years ago...MK

I suspected as much, but the coincidence of the harmonic coming in so close to one of their other broadcast freq's made me wonder a bit. That and the fact that I've never picked up harmonics from SW in the MW end of my dial. I usually come across them 910 KHz away from the true frequency. Thanks for all of your help explaining this to me. I snipped it in this reply, but I've saved in my mailbox and I'll be sure to study it in more depth.

Havana says that she's saying that the US doesn't agree with freeing
hostages through negotiation, and since she was freed through
negotiation (apparently she's no longer mentioning payment of ransom)
the US wanted to kill her. Makes sense to me, Beavis, huh huh, huh huh.
Furthermore, since the Italians had notified the Americans of their
operation, and since the Americans had allowed an Italian plane to land
at Baghdad to pick her up that the goverments were working "in harmony"
and the Americans knew exactly where she would be and what car she would
be in. According to her, there was no checkpoint, there was no warning
of any kind before the soldiers opened fire. Sure, and she's got a canal
in Venice for sale cheap. I sometimes wonder what planet dumped this
"people's vanguard" on us.

1498. FS: Like new Sony ICF-SW100S Mini Portable SW Receiver and Sony AN-LP1

Newsgroup: rec.radio.shortwave
Date: 2005-03-08 04:52:01 UTC
From: roadwarrior <dcisive@hotmail.com>
Message-ID: <RbaXd.26$jH2.8015@news.uswest.net>
Source record: 11036

I have both items a Sony ICF-SW100S mini portable shortwave receiver and the AN-LP1 amplified screen antenna for sale. They are very lightly used and present as "like new in box" with all original packaging etc. The box looks untouched and the manual and printed materials were never even opened. This radio is of course remarkable in that it has synchronous upper and lower sideband for superior fade free reception and is barely the size of a cigarette pack, yet offers similar performance to their much larger radios without the bulk. Complete with a amplified antenna system/preselector. All original accessories are of course included. AC adapter, ear buds soft case etc. For the serious hobbiest that likes portability AND performance this is a great setup. _*Will ship anywhere in the Continental U.S. for $300 including shipping*_. Contact me either at _*dcisive@hotmail.com *_or _*dcisive@qwest.net*_. I'm in the State of Utah, USA.

For a well designed integrated circuit, the most likely thing to fail is the package, which in turn leads to failure in the bonding. Consumer grade electronics use porous plastic packages, while the military forks out for ceramic.

It is possible to get ion contaminator from how the wafers were handled (such as a moron touching the edge), but the associated threshold shifts show up very soon. I'm not sure if you can find this on the net, but all the IC companies do some sort of die seal to reduce this problem.

I'd blame the capacitors, especially tantalum. Resistors should be stable.

Regarding electromigration, this is also well understood and compensated for in the design process.

I can tell you that most chips coming to a failure analysis lab are damaged by electrical overstress. Often a power surge will shoot right through the power supply and zap some chip. [Some radios are "always on" if hooked up to the AC mains, so a radio that is off can get zapped.] Second comes latch-up related problems, not exactly the fault of the chip, i.e. all chips using reverse biased diode isolation will latch under some external conditions.

The Wellbrook is great, but not a big seller, especially the ALA 100, which is just the amp. Based on serial numbers, they sold 3 in 9 months in the US market. Other than size, the wellbrook beats out any of those loops like the Kiwa or Quantum. The Kiwa might be of some advantage if you don't have narrow band filters in you radio, but anyone forking out the $400 for a Kiwa probably has a decent rig.

I suspect the US market doesn't like the hoops you need to go through to buy the Wellbrook. No secure internet website for instance. No toll free numbers.

It is very stale and old-fashioned sounding. They've been using Ratt
for the News Sounder for what, five years now? There news sucks; all
Michale Jackson and Robert Blake. Their Drive Time is wall to wall
commercials, except for the ranting about the Mexicans. It's awful.

I think the best technical air sound is on 1260.

Hey Jack,

I agree with you, but an operator may not even swap "plug-and-play" modules, unless s/he is just flipping a switch. They may disconnect and remove the radio and replace it, but they may not open it or perform any mods or adjustments. That is still the exclusive domain of the repairer, according to FCC rules. You might check some of the US Mariner organization web sites for more info about requirements for Radio Officers as well. They still need the second class radiotelegraph license to be on the ships which is still 20 WPM.

As far as the code required to operate the stations, I agree with you about aircraft, however, see the above for maritime stations. A 2nd class radiotelegraph is still needed for the operator, despite the station itself being licensed, at least for US flagged vessels. There is still a very large proliferation of CW coast stations worldwide as well, so something is still going on, right?

As far as my anecdotal story goes, that was what the ARRLs story was way back when, when I got my license. I believe that to be more palatable than your anectode at any rate. True or not, that's what was in the books and that's what we all believed. The War Dept. (now the Dept. of the Army) didn't cause cessation of ham radio until everything hit the fan in WWII. Hams were even regarded as national resources and helped win the war.

Unfortunately, We the People gave Big Brother the rights to our airwaves many, many years ago. Now they are regulated by the government and just you try to do something saying they belong to the people. See what happens, LOL. The only time they belong to the people is when the government is prosecuting someone in the name of the people. It's easier to get convictions that way. LOL

I know a lot of your own personal feelings are put into your posts, but unfortunately, what you believe, and what laws and rules actually exist, conflict in so many areas, Jack. Code is still required for a reason, whatever that may be, and while I agree it may not be necessary in the vast majority of cases, there will always be that one exception to the rule emergency-wise, that I believe completely justifies at least keeping the 5 WPM.

I forgot to mention that the S-meter scale now has a white background
with black letters and a red tipped needle. I copied the original on the
scanner and made the changes with Adobe Photo Shop before printing it to
glossy paper. I may get around to making a new case cover from heavier
sheet metal, just for fun.

Could anyone let me know the best way to make an aerial, if I'm travelling with my Roberts SW radio abroad, usually in a hotel room.

Sometimes I just use a piece of wire, but I'm not sure the best way to do this. Last time attaching it to the door knob seemed to help.

My Roberts is about 12 years old and is still going strong.

Thanks

Source record: 11159

A new covenant does not mean the law is done away with. Christ said He CAME NOT to destroy the law, but to fulfill it.

If He had, why not do away with the law of gravity, etc. also?

A quick cut and paste from elsewhere....

The question remains: Why did Christians decide
to disregard these ancient food laws?
The answer lies in "Acts".

The first hint of a rejection of the food laws is found in Acts 10v9-16, where it is recorded that Peter visited Cornelius. When Peter went to prey he became hungry, then fell into a trance. He saw heaven open and a great vessel descend holding all manner of beasts. A voice bid Peter to eat but he refused on the grounds that he had never eaten anything common or unclean. The voice replied: ï¿½What God hath cleansed, that call not thou uncommon.ï¿½

The final rejection of the food laws (and indeed of most of the Jewish Law) is found in Acts 15v24-29, where the meeting of the Council at Jerusalem is recorded. The rejection comes in response to the Jewish element directing that the Gentile Christians should be circumcised and keep the Law. However the leaders of the fledgling Church claimed that they had given no such commandment, considering that keeping to the Jewish Law was a subversion of the soul. Instead it was decided:

ï¿½ï¿½ to lay upon you no greater burden than these necessary things; that ye abstain from meats offered to idols, and from blood, and from things strangled, and from fornication ï¿½ï¿½ Acts 15v29,29.

The death knell would have sounded for the early Christian Church had its leaders insisted that their new Gentile members be circumcised and keep the Jewish Law. They would have left in droves! Thus it was good strategy on the part of the Council at Jerusalem to rescind the Jewish Law.

The way was open for Christians to eat Pork!

The Side Effects of Eating Pork

The side effects of eating Pork are well documented and attested. Perhaps the most famous example is that of the Buddha who died from food poisoning after eating a pork dinner. Other side effects of eating Pork include: inflammation, itchiness, swelling, obesity, meningo-encephalitis, arthritis, focal granulomas or abscesses, body odour, bad breath, hot or cold flushes, headache, dizziness, heartburn,

seizures, stroke, epilepsy, ocular cysts and myelopathy.

The parasitic Trichinae Worm, which is also referred to as the Pork Worm, is responsible for some horrific deaths among humans who eat Pork. From the stomach the worm gradually invades the muscular system, but the side effects are often attributed to other causes. Eventually the lava mature into worms, die and calcify, forming cysts. At this stage the disease is called ï¿½Cysticercosisï¿½. However when the encysted worms are found on any of: the brain, spinal cord, the membranes enclosing the brain and spinal cord (meninges) or the eyes, then the disease is called ï¿½Neurocysticercosisï¿½.

In an article ï¿½Pig Factsï¿½ the process of development of the Trichinae Worm is explained.

ï¿½The Trichinae is enclosed in a little cyst or sac, which, when taken into the stomach, is dissolved by the gastric juice ï¿½and ï¿½ gradually works its way throughout the whole muscular system.
In five to seven days the larvae mature in the muscles of the human body. When they finish their life cycle they become encysted into the internal organs of the host.
The pork worm is unable to be detected with the human eye and most pathologists have reported that there is a possibility for nearly half a million of trichinae to be found in each pound of muscle tissue of the host.ï¿½

And back in the days when those dietary laws were instituted no one had the scientific evidence we had today, therefore they made sense.

Don't make the mistake that the Muslims make these days and try to stay rooted in 1000 year old beliefs.

It ain't workin.

Most likely so, with the Degen having better strong signal handling and lower oscillator phase noise (the ATS-803A was a Typical '80s Noize Box in that regard). It apparently also shines on FM, with very good overload rejection.

> or possibly somewhat better in the
> Degen? The DX-440 seems to suffer somewhat from spurious signals on

The '1103 is not free of images either, though its image rejection is a bit better than that on the venerable Sony ICF-SW7600G(R) (which you may want to pick instead if you value SSB more and can make use of a sideband selectable sync detector).

There is a group on yahoo: http://groups.yahoo.com/group/icf2010/

If you join this group, you'll see there is a serial number database for the Sony ICF-2010 / ICF-2001D (Identical radios, 2010 for the USA, 2001D for rest of the world. There were also some model variations where frequency coverage was limited (for example, no Air band) for certain parts of the world.)

Mike, the 2010/2001D was around before 1987. I bought my 2001D in Chile,
early in 1986.

I think the radio was introduced in late 1984.

I turned on 9330 kHz @ 5 P.M. EST in the hope that they might have a Jean Shepherd Program. (which was pre-empted on WBAI at 5:15 A.M. Tuesday by Womens' Day programming)

Instead I heard deuling audio feeds between some nice bluesy music and some version or other of the TRUTH that THEY don't want you to know.

Leave it to Icom....they'll sell you a $1000 receiver for $549 then charge you 100-200 per filter.....that's just the way the game is played these days.

I purchased a like-new Drake R-8 with VHF and accessory speaker for under $600 on ebay. No extra filters to buy here. Just enjoying great reception.

the petty little squabbles around here are so hilarious and entertaining that they rival shortwave itself as a hobby. one aspect that i enjoy of sw is hearing certain loony people (you know who they are) say completely outrageous things in public. this ng also has a certain amount of that content. often a completely legitimate thread will erupt into chaos before your very eyes. when it becomes tedious and boring i quit that thread and look for another interesting post to click on, perhaps even one that is ON TOPIC! (as rare as that is) some of the worst flamers here are also some of the most prolific posters of knowledgable sw content also. as an example a certain guy with his hot-rod radio who thinks he is better than everyone else is also posting logs of rare and unusual contacts. if we "plonk" that guy then we will miss the opportunity to hear a catch that we might never find without his direction. its your choice to read or not, so choose.

I've been using my R-75 with the stock filters for two years. I also have experience with the Drake R8 series and the Kenwood R-5000 to compare the stock R-75 performance to. IMO, you really dont need any additional filters in the R-75. It does just fine with what it comes with. In the situations where you would need a different filter, there are tricks you can do with the radio to make up for it. You would get some use out of an optional filter, but it wont be worth the money. The beauty of the R-75 is that it is a very low priced receiver that has performance specs well above its cost. It is a SUPREME radio in ssb, for DX'ing and utility. It is an "adequate" radio for broadcast listening. The best use of extra money on the R-75 is to buy a nice external speaker. The next step would be the Kiwa sync and audio mod. Other then that, it is what it is.... It will never be a top flight radio for broadcast listening like the R8b. Spending money on optional filters defeats the purpose of getting an R-75. That being, value for dollar.

Just my 2 cents.

I bought the 2.8 9m filter for ECSS and Hams and I love it. Perfect for those pesky AM stations and fantastic for Hams. I paid a whole $60 shipped off Ebay. My $50 rebate will pay for it.

The twin PBT on the R-75 can't be beat for DX'ing. The receiver is extremely sensitive. There is no better rig for SSB for the money.

So for $485 {$425 for the receiver plus $60} I have a brand *new radio with a warranty, a bunch of filters I can MIX and match plus *DSP. Throw those twin PBT into the picture...and well you get the picture!

I paid $450.00 for mine brand new and it came with the free UT-106 DSP untit. I did not buy any additional filters, but I did have the Kiwa mods done. The sync mod was $45.00 and the audio upgrade was $35.00. Both mods were worth the price. One interesting thing I noticed with the sync mod. Asside from improving the over all performance of the stock sync, it also improved the performance of the NR function of the DSP module. Before the Kiwa mods, the best you could do was set the DSP NR to a setting of about 6 before you got all sorts of wobble. After the Kiwa sync mod, I can use NR settings all the way up to 15 without the distortion I got before the mod. There was no mention that the Kiwa sync mod would improve the function of the DSP NR, but it did. Using ECSS with the DSP module and the twin BPT, I find I can clean up just about any weak and messy signal. Given the possible combinations that those features and be tweaked in, I never saw need for an extra filter. For only $ 60.00 though, I'd add filters. I'd want a 2.8 kHz filter in the 9 MHz IF and a 3.3 kHz filter in the 455 kHz IF. That would be kewl !!!! If you could point me to where I could get them for $ 60.00, I'd buy them tonight !!!!

Awww... Man... I listen to his show from time to time for a laugh. He is so sincere and earnest, you cant help but want to listen to his kookology. It has been the same story from him now for years. "The sky is falling, the ground is quaking, every country on Earth is gearing up to attack us, the dollar is about to collapse... You will need portable wealth to survive all of what is coming... Oh... By the way did I tell you that I sell gold coins for a substantial mark-up ???"

That is about it in a nut shell from him.

Please Al, get some help somewhere. I wouldn't want to eat a Catfish
caught wild in the nearby river, but farm raised catfish is about the
best fish there is, safety wise. Most Shrimp these days are also farm
raised. You are reading a book filled, and apparently basing your diet
on nonsense, superstitions and actually some common sense for conditions
2000 years ago. But things have changed now Al.

I had to snip your drivel, it was nonsense anyway. Corrupted too, BTW.

I bought it off this Chinese dude. He's on Ebay but I dealt with him off
Ebay.

Is that your e-mail addy? I'll send you his e-mail. Oh shit here it is. I don't think he'll mind if it means bread for him.
He's in Taiwan but I got the filter in 8 days.

He wants much more for the 257, not $60. More like $155 for the 257 shipped.

No, but when the "wood-pecker" was around, it would make me drowsey
listening to it. Almost hypnotic. Either that, or it would make me want to
smash the radio. Depended on my mood, I guess. I can just hear it now....

BaSically, I agree. I pondered the idea of getting the extra
filters, but given my listening preferences, there is no way I'd get my
money's worth out of them. The most useful thing you can get for the
Icom is the DSP filter, which it invariably comes with today, anyhow.
And with the exellent ECSS capability, I don't even miss the Kiwa mod.

Tony

$ 155 is too much !!!! It isnt over priced, but I wouldent spend that much
for a filter for an R-75. Id save up a few more bucks and get another radio
:-) Thanx for the tip, though !!!

Al Patrick <arp@_NOSPAM_inet4u.com> wrote in
news:112v3uo49rm9r16@corp.supernews.com:

Hi Al, I too listen to Steve, but I don't really take him too seriously.

There are indeed a plethora of earthquakes affecting Alaska and
California, somewhat more, I would imagine, than usual. I usually visit
this page when Steve et al. speak about earthquakes. There seems to be a
lot of activity within the day. Within the week, up State New York
appears to have had a 3rd magnitude earthquake, with the tip of Maine
listed as having a 5th magnitude earthquake.

Interesting, but California and Alaska always have significant
earthquake activity, so it's not necessarily portentous.

Regards.

Dr. Artaud

Just get the 2.8

I hear the 3.3 is too wide. Let's the carrier and other garbage in.
Price/performance wise all you need is the 2.8

Lucky

Well I found this on Radio Magazine
http://beradio.com/searchresults/?terms=KFI&ord=d

KFI Tower Felled by Plane Crash
La Mirada, CA - Dec 19, 2004 - The Associated Press reports that a
private plane crashed into the tower of KFI-AM at 9:45 a.m. on Dec. 19.
The single-engine Cessna 182 brought the 760' tower down. The two people
on the plane were killed. Their identities have not yet been released.

The plane was en route to Fullerton Airport from El Monte when it
crashed. Fullerton airport is about one mile from the tower site. The
FAA reports that the pilot did not issue any distress reports.

KFI's tower has resisted earthquakes and a brush with a private plane
once before. The tower survived the previous air incident. The tower's
guy wires were replaced in March 2004 after 47 years of use.

KFI reports that the station was off the air for about an hour before
switching to an auxiliary tower at the same site at about 5kW. The
station is licensed for 50kW into the main antenna.

I have heard them claim 50kW in the past and I thought 640 was one of
the old "clear channels."

Did they reduce power after putting up a new antenna?

It's wall to wall misdirection. Michael Jackson and Robert Blake are
not news. I am not a fan of explosions and heavy metal stingers.
It's all sizzle and no steak.

When did they reduce power? Everything I check still shows them at 50 kW,
including the FCC data.

David,

What Roger may not want to say, I will: GWB, while Roger was there, was one of the absolute finest radio companies in America if not the entire world. Service, responsibility, strong, live personalities, localism, high technical standards, decent treatment of the staff and general responsible business practices while making a profit.

Those of us still in radio would be honored to be considered to be in the same league as Roger.

Because of this, if roger says it, it is likely 99.9% correct. And that goes for his latest post.

1567. Found my first radio again!

Newsgroup: rec.radio.shortwave
Date: 2005-03-10 02:01:16 UTC
From: r2000swler@hotmail.com
Message-ID: <1110419696.127010.272930@o13g2000cwo.googlegroups.com>
Source record: 11054

My dad called tonight and told me they found another box
in the endless cavern that is their basement. It is my first
SW radio. A old Zenith AM/SW. I can't wait to pick it up
Thursday and start the rebuilding project. I suspect that all
the caps have eiother dried out and open, or are leaky.
Dad said that I packed it real good wraped in newspapers with
a photcopy of the Rider (Ryder) service data. I had forgoten
that I had scrounged up several spare tubes so this baby should
last a while. The original plastic (bakelight?) case was cracked
so I made a case for it in 7th grade shop class. Every since
they found my GR64 several years ago I had wondered what had
happened to the old gall. If I remember correctly the radio
covered from about 5 through or just beyond 15MHz.
Dad says that it has some of my early attempts at antenna design.
These I can't wait to see. I do remember planning (dreaming)
to put a wire from the hill behind my grandmother's house to the
hill top on the other side of the valley. Only about 1500'. Dad
tried to explain wire sag but heck, what does a 7th grade know
about that!
I got that radio while cleaning out a widows attic. Got paid $5 whole
dollars. That was the early summer of 1963. I knew enough not to plug
it in until my dad got home. He called a friend who brought over a
magic capacitor checker and they checked and replaced all the caps.
The friend was a TV/Repair man and even aligned it for me. We laid
about 50' of wire out and sure enough it worked. It was late so
dad said we would put up a "real" antenna the next morning. I was
flabergasted. My dad NEVER took off work unless someone was sick or
dead. True to his word we went to the local radio store, Radio
Electronics is still in business but a ghost of their past, and
bought 125' of antenna wire with two ceramic insulators and a 8'
ground rod. Must have cost all of $5. His treat. We spent the rest
of that morning putting up a 98' "long wire" that I used until I
married and left my parents home. His friend insisted that I use
an "isolation" transfomer that he gave me. I still use the ceramic
insultors, but the antenna wire got tangled in fallen trees in the
ice storm of 1991 and I couldn't salvage much of it, or at least
not in one piece. But at least the radio will have a nice home, out
of a cramped box.
I will post a review of this radio after I "restore" her.
I am much more excited about this radio then the "new" PCR1000
that I just got in a complicated trade. I am blessed with a wife
who shares my love of radios and loves "old things". Might be
why she keeps me. The old things part.

25 khz or 25 Mhz? I doubt there's anything except a few data signals
around 25 khz, I know WWVB operates at 60 khz. 25 Mhz, on the other
hand, is on the upper end of the HF spectrum, around the CB band. I
believe some CB freebanders may hang out in that area.

"Anomalies"? What exactly is an "anomaly"? Is it like the Mystery Spot?

As for Michael's post, it seems to me that a lot of SW kooks are using advanced kookology in the service of selling gold (or occasionally diamonds). They use kook theories to "prove" that civilization is about to collapse, and once they've whipped their listeners into a panic, they offer to sell them gold coins as a means of surviving said collapse. If the shit really DOES hit the fan someday, I'd like to see the kooks eat their gold coins, while I grow vegetables and roots (I need to plant some fruit trees too, mine all died) on a one acre plot of land. While the kooks and their followers desperately try to trade their gold for food, I will trade food for gold (if I feel so inclined) and amass a nice collection of Kook Gold in my attic and still have seeds to plant next year, while the kooks will eventually run out of gold to trade for food and will starve. Since I will have a nice collection of gold, I will offer to let them eat my gold, and have fun watching them trying to chew their coins. Life is good. :)

Note: I use ATS-803a and DX-440 here interchangeably since they are
practically the same radio.

I have the ATS-803a and the DE1103 so I can speak to this somewhat. For
shortwave listening, they are comparable. If I can receive something on
one, I can receive it on the other. Sound quality is similar, the bass
is slightly deeper on the ATS-803a. The speaker on the DE-1103 is quite
powerful for its size. I should note that my antenna is a single 20
foot horizontal wire in a detached garage away from my house, fed
through a transformer on an FT-43 torroid. Thus, I have no idea if
either would overload or not with a "real" antenna.

On MW, they both are comparable as well, but the small size of the DE-
1103 allows for easier rotation (on my desk, anyways) for optimal
reception. The ATS-803a/DX-440 has the benefit of turning off the MW
ferrite antenna when you plug in an antenna wire--on my desk, next to my
noisy computer, this allows me to silence the high RF interference
inside the house, and receive the signal from my (coax fed) wire antenna
instead.

The ATS-803a has a quirk where the tuning knob behaves strangly--at
least mine does--jumping 100 khz at a time sometimes, so the DE-1103 is
easier for me to use for manual bandscanning. I found some stations in
the day (22,19,16 m etc) that I missed before with autoscan. However,
it does get stuck in band segments (by design) and you have to hit the
band + button to jump to the next. To scan between "bands", you must
enter a frequency in the segment, and then use the knob to scan.

I don't know about the BFO's, they both seem to fine-tune as easily and
zero beat as easily, but except for a few HAMS, most SSB signals here

are so weak that I can't tell if either is any good. AFRTS, for example, is tunable but too weak to hear.

As to FM, I have no idea, except that they both "work." They both receive weak FM stations equally as far as I can tell.

Overall, the main advantage of the DE-1103 over the ATS-803a is its size and portability. Also, the faux-analog display can help people like me who don't have the bands memorized. The main advantage of the ATS-803a is that a full service manual is available with full schematics, and with the exception of a few components, if it breaks, you can probably fix it, or someone else can. Also, the ATS-803a has massive batteries that last for ages.

One final note, the Degen 1103 behaved very strangely when I received it--it would only receive on even frequencies (i.e. 5000 not 5001), and would lock-up a lot. I was almost ready to send it back when I tried different batteries, in this case Energizer 2100 mAh NiCad's. Now, everything works fine. I compared the batteries that came with it with others, even with the AA's that came with my Degen 1102, and the 1103's batteries they are about 0.6 mm shorter each. I suspect a weak battery compartment spring and the shorter length was causing poor contact.

Oh, the Degen batteries? They are happily in my digital camera and working fine.

Hope this helps.

> It ain't workin.

I don't eat pork because it is very fatty meat. Ever cooked pork chops
in a convection oven? It leaves behind gobs of disgusting fat. It only
took me about a dozen times of cleaning that out before I swore off
pork. Even though I don't have the convection oven anymore, I still
won't eat pork. I don't eat shellfish because they secrete a toxin that
can be deadly. The CIA used to give spies shellfish toxin to take to
kill themselves if they were ever captured. If you don't cook the
shellfish right, you too will become paralyzed and die rather quickly.

In my Latin American History class (college diversity requirement) my
Mexican professor told us how his mother used to ask pork vendors to cut

off a thin slice from their pork chops so she could see how many trich cysts there were, if there were too many she wouldn't buy it. And I once had an old man tell me how his father ate some shellfish that didn't taste right on a train. Later, his bunkmate noticed that his lips were green. He tried to get up and couldn't move. Fortunately the train was passing through a small town with a small hospital, and the man survived, but five minutes later and he would have been dead.

Sorta, it was called just plain Hughes at that time though in full it
was General Motors Hughes Electronics, we seldom called ourselve GM.
GM bought Hughes Aircraft then it was split up for sale to Raytheon
(most of the military business) and one of the remaining divisions,
HSC - Hughes Space and Communications, was sold to Boeing. DirecTV
was a subsidiary of HSC in it's early days, a creation of the folks in
Hughes who operated the satellite fleet mostly known as 'Galaxy.' I
know the history as I've been there 25 years, since it was Hughes
Aircraft Company - under the umbrella of the Hughes Medical

Foundation. In fact David, I am a Project Manager on the XM Satellite program.

The Romans ate mice. Stuffed mice were considered a delicacy for much of
Rome's grandeur. That's probably where this prohibition comes from. The
Bible also forbids eating grapes because the Romans loved grapes.

DX ..... I've given him a quick history, just posted a few moments ago. As mentioned, I'm a 25 year veteran of Hughes Aircraft/General Motors Hughes Electronics/Boeing Satellite Systems. And guess what - we've just changed our name again! We are now SDC - Satellite Design Center of Space and Information Systems, Integrated Defense Systems, Boeing. I'm sure you understand, just a division buried in a larger company - not sure if some other(s) will catch on though.

Does it bother you that the signals your satellites send out kill
people? Or am I interpreting David's rants wrong? ;)

Source record: 11071

The Kaito KA1103 (also sold as the Degen DE1103) is probably the best performing radio in the world for less than $100.

I have the Degen DE1103 version and I absolutely love it!

http://groups.yahoo.com/group/kaito-de1103/
http://www.radiointel.com/review-degende1103.htm
http://www.eham.net/reviews/detail/4288

You also asked about the 1102. I also have a Degen DE1102. When the 1102 first hit the market, it made a lot of people take notice about Degen radios. By the time they released the 1103, then Degen became a major player. I like my 1102. It's small yet powerful, and it has a pretty blue light that glows from every single button. But I can only use one radio at once, and my 1103 is my every day radio. That means that my 1102 only gets used on the day that my 1103 is hooked to the battery charger.

Honestly, you can't go wrong with either radio.

Our satellite signals kill people? Damn, we'll have to advertise that
as a new feature and charge our customers more 8-}

All righty then...

I took a short walk to the beach and took a gander at it. Sky is blue
with white puffy clouds. The ocean waves breaking just before they
reach the beach. Seagulls flying around and the temperature is in the
70's. Then I looked up and down the coast, everything looks normal. The
fog rolled in late afternoon so it was a gray sunset.

Anything else I can do for you just let me know OK.

Go to rec.antiques.radio+phono with the model number and the guys there should be able to tell you how old it is. I always loved old tube radios. My first SW receiver was a Hallicrafters S-40, made in 1946-48. I loved the eerie glow of the tubes and the green glow of the plastic dial and the smell of cooking dust while listening to "Radio Moscow World Service" (an attempt to compete with the BBC World Service) and the various stations I could pick up, mostly in the 31m band. That radio died a slow death until I sold it to a retired TV tech for $20, and he promised to restore it. I now have a Yaesu FRG-8800 as my main rig, but I'll never forget that Hallicrafters. I bet it would go for a pretty penny on ebay-it was in pretty good shape.

I have, at various times, been lulled to sleep by...

- numbers stations
- VOLMET and HF Aero comms
- HF Marine
- R. Australia and R. New Zealand
- L.Am. tropical banders
- CFRB (well, CFRX actually)
- Radio Mil, when they used to be heard fairly easily on 6010

Is Radio Mil still there on 6010? I haven't listened in a couple years.

There's a nice one on there already. Didn't really check close enough to
see if it's the same one.

What a fun post to read. I love old radios, too. I have an old Philco model 84 that was built sometime in the 1930's... the caps, tubes and the power cord were replaced, as well as the speaker cloth... so it looks like old, but works like new. No SW band though, just AM, and I'm less than 3 miles away from a flamethrower AM station, so I can't pick up much more than that one station... but it looks cool and is a great conversation piece.

It's funny how old radios, more than any other piece of electronic equipment, seem to conjure up folks' memories of their dad's/grandad's/great-grandad's radio from way back in the early part of the last century. Whenever people see mine, they usually say something like, "Hey, I remember my granddad had one of those old tube radios, too", then they will try and describe what it looked like. Great fun!

Have them both, use them both, LOVE them both. They represent some of the greatest values available today for radios in their class (smaller portables, under $100). I would not hesitate to recommend either-- or both-- of them.

Heard in California with S8 signal level from 0350 to 0356 sign off.
African music and a monologue by a man with an African accent, the
content of which I couldn't make out. Passport says that this signal is
meant for East Africa from Meyerton, South Africa, in English.

You have time interval signals and other strange things down in the VLF range. I am not sure what this one is. Sometimes, there are narrow shift data transmissions down there.

I knew John P. Boatwright. You could take all of the most irritating and crazy people posting to r.r.s, stuff them into one person, and not even approach the lunacy that was him. Fortunately, he's been off of Usenet for several years. People used to be afraid of using his name in a post for fear of summoning him. IIRC he'd scan dejanews for instances of his name such as this one, and lo and behold...he'd appear. NOT good.

His webpage is still online:

http://home.teleport.com/~salad/4god/index.html

The bit about nuclear bombs in the Bible can be found here:

His Royal Highness the Prince of Wales has just visited New Zealand for two days. Yesterday, did some royal monitoring and heard the RNZAF flight carrying Prince Charles into Whenuapai Airbase, Auckland.

Today, more royal listening with lots of police escort traffic on the scanner etc.

And monitored his royal flight from the apron at Auckland International to Nadi, Fiji. Interestingly, as the flight progressed north, the pilot was asked to maintain a listening watch on 121.5 MHz. Rescue Coordination Centre in Wellington were receiving an ELT about 280 nm North of New Zealand's North Cape.

On HF, here's my Royal Log:

08867 kHz "Royal One": Flight carrying Prince Charles from Auckland (01:41 09Mar2005 UTC) USB Selcal was BGCK Secondary freq 13261. (MM)

Yours Royally,

Mark.

Auckland

New Zealand.

Thats' very low for good reception on a typical shortwave antenna. What kind of antenna were you using? What receiver? I would suspect some kind of local signal (noise?) getting into the radio on such a low frequency before assuming it is coming from long distance propagation but maybe you are close to the transmitter.

It does make me wonder how the Icom filters could be worth what they get
for them. You can buy the legendary Collins mechanical filters for those
prices. Drake made a good decision by using a low second IF (50-Khz)
which permits the use of much less costly LC filters that perform well.

> What about a number like 366000 something like that. Could someone
> shed some light on this and explain why it's so important. What do you
> recommend?
>

Hi,

AFAIU, the serial number thing was/is mostly a concern as to whether the unit has diode protection when using an external ariel. The front end of this unit is quite sensitive and has been known to blow the first fet, Q303, from static discharges. The (very)early units did not have these diodes installed from the factory, while later ones did....

The fet is getting a bit tough to source easily...but they are still around... and there are other fets that can be used.

Additionally, it is said that later models use more smt than the earlier ones. I cannot confirm/refute this....

I also do not know whether there is a direct connection between sn and the model type. Some 2001d's either came w/o air band, 26Mhz max, and a gap in the bands somewhere...But this is easy to determine...

As someone else said, there's a yahoo group on this radio...

hope this helps...

regards,
nikos

It's on a Wellbrook ala 100. The signal is real. If you listen to the signal, it sounds like FSK, but a software decoder (skysweep) I tried won't lock on it. The radio is a AR7030, so the low frequency reception is pretty good. I have no trouble getting the 100khz loran, and 60khz time signal.I've even demoded DGPS.

1623. Re: signal around 25khz

I get those clamp on ferrites for a dollar or two at the electronics fleamarket.

Has anyone ever figured out if it is kosher to put a ferrite on an ethernet cable. Those cables are real noise sources. I guess they don't shield them to be cheap or to keep the capacitance low.

And by the look of the base and the way that the nomenclature is on the tag it looks as though it was built for some type of military application.

Good hunting for some info on it.

Well, you and Jesus pass me your share of BBQed pork ribs,
will ya, Al? Thanks.... (yuuuuum, yum!).
You can keep the oysters and catfish; don't care for 'em.
But scallops? Pass them too, and tell Jesus
to stop hogging the Tarter sauce.

Carp have scales, Al. Ever seen what they eat?
It'll put you off your Post Toasties.

Just curious, Al: do you and your "significant other"
ever have sex just for fun, or is that a "sin?"

My Zenith clearly doesn't look all that old. While my wooden case
was a good effort, I was only in the 7th grade, I wish I had
saved the original case. I suspect it could have been repaired.
But it will be nice to have her, I always think of radios and
cars as "shes", back in operation again. The Zenith had a much
better sound then the Heath GR64, but the GR64 was much more
sensitive and had much better selectivity.

Thanks to you all for taking the time to respond with your
experiences! Looks like I will be ordering the Degen any day now. Two
other things - I have noticed that, especially when I first turn it
on, the DX-440 needs to be tuned to 1 kHZ higher than the actual
frequency to get the best signal (e. g. WWV peaks on 10001). Also, it
seems noisier when using batteries as compared to the AC adapter - a
grounding issue?

Best regards,
Tom

Interesting. I'm going to have to read up on these antennas now that my
curiosity is piqued. I'm wondering what the strengths and weaknesses
are of the turnstile design. Off the top of my head, I suspect that
this is probably not a great receive-only antenna and is probably
intended for hams. But I'll see what I can find about this design on
the web. You don't see many of these on ebay.

I did a Google on the very small company and it would appear that this particular
antenna had some military application.

Most things in life come down to common sense. Those old dietary laws, rules, etc. may have made perfect sense back in the day, but now we generally know how to cook and properly prepare food.

I personally don't want to live as many are wont to do back a thousand years or more.

There was no radio!

Hello Friends
Currently using my handy dandy Grundig S350 with occasional uses of my long in the tooth Sangean ATS803A for AM BCB DX. That 803A is more selective than I would've given it credit for. I have 2 communications recievers (old Icom R72 and a fairly new Yaesu FRG100B). Some of the tax refund is going on a good BCB DX antenna. Wonder if anyone out there uses a communications RX for AM DX'ing (always wanted to try it)...what antenna do you use?? If I can find the webpage..there is 1 company that makes an "outboard" rotating ferrite rod of pretty good size. But, what do you folks use? Thanks 73 Greg WDX9KHY

A 468 foot dipole at 500 feet - Just kiddin

I do use the Select-A-Tenna from CC Crane -- see URL:
http://www.ccrane.com/am-antennas.aspx
with pretty good results
Understand it was developed in Alaska to allow them to get AM reception from
the lower 48 states

A GE Super radio ($39.00 or so) works well if price is an object.

I use a humble MFJ-1024 (slightly modified) on a 20' pole. It works like an old car radio antenna. I can get the TIS station at LAX on 530, about 40 miles away. At night, there's something on every channel. My MW workhorse is a Drake SW2.

[snip]

Phil Nelson of Phil's Old Radios has a couple of very helpful webpages
concerning radio restoration. They're worth reading:

http://antiqueradio.org/howfix.htm

http://antiqueradio.org/recap.htm

Also, the radio related parts of the rec.antiques.radio+phono FAQ are
certainly worth a look:

http://antiqueradio.org/radfaq.htm

I don't know if you've already found this information, but, if not, I think
it will be helpful.

Good luck!

I have tuned to empty freqs and used the static to lull me to sleep.
Alternatively, if I could find an empty carrier I would listen to it in AM,
and with the ups & down of propagational fading, it would sound like ocean
waves.

I don't suppose anyone in the Midwest has been able
to pick up some of these? I know that my Satellit 800 isn't
a DX-ing monster (well, with 50' of long wire farther away
from the house it's now much better, but it ain't no R8 or
IC-R71A), but I'm rather curious about picking up some
of the relays in the evening.

I think it depends on a lot of factors; I was surpised
seeing an S20R over $100 right now on eBay, so the
S-40 could have brought in a few bucks.

Plain ol' crystal aging. These tend to drift off their original
frequency as they get older. I'd suspect the one in the 2nd LO here,
since it has the highest nominal frequency. Realignment should fix that.

> Also, it
> seems noisier when using batteries as compared to the AC adapter - a

Hmm. Maybe it is - I've only experienced reduced sensitivity on my 7600G
when not operated on mains, but no increased noise per se.

I'll risk a "metoo" from SE Canada. I've been tuning in to Channel Africa a few times with a few metres of wire hanging out the door. There was a report on Ghana's recent independence celebrations which was of special interest to me since my SO (XYL?) did some field research there a few years back.

The best reception for me was more like 1400 hours, or so. I don't what it is, but my daytime reception is fantastic lately.

Sony ICF-SW100, just about as compact as it gets. Non-negligible pricing
though. With some luck, an ICF-SW07 may still be found. Better rx than
the '100 (bigger, too) and comes with matching active loop antenna. For
a budget option: DE/KA1102. SSB not too great (somewhat wobbly) unless
signal strength LEDs are disconnected. A DE/KA1103 is somewhat larger
still but also a better receiver. Last but not least the Sony
ICF-SW7600GR but I don't know whether that still classifies as small.

Based on a very few web returns for this company via Google, Parisi Associates appears to be a defense contractor, primarily. At least one webpage showed a price of around $49,500 for one of their antennas. The Burlington address seems to be current, although a specific Waltham address also shows up.

The antenna looks like mil surplus; sure looks durable!

One good bet is the Navy transmitter at Jim Creek, Washington
(Between Arlington and Darington, north of Everett and Seattle).

It is (or was) 300 kilowatts running on 24.8 kHz, with narrowband RTTY,
so deeply encrypted any software wouldn't have a chance.

I drove up there one time to look at the antenna. It's a top
loaded vertical in a narrow valley, with antennas supported
by a mountain range.

There is/was another station in Maine.

I used to listen to weather balloons - radiosondes - when they used AM
tones on HF. Very eerie series of almost-repeating tones in a strict
rhythm, drifting in and out somewhere around the otherwise silent
reaches of 26MHz in the middle of the night. Occasionally, you'd get
an ionosonde sweeping through.

The balloons are now all on UHF and FM data, so they just go
chuff-chuff-chuff. Not the same, not the same at all.

I'd guess that their customers disappeared. Shopping at
military-surplus stores just isn't what your typical American consumer
is into these days, just as we don't go to railroad-salvage stores
anymore to buy cases of dented cans of Campbell's soup. Just the same,
there's Sherper's and American Science and Surplus here in the Milwaukee
area that usually have plenty of real, honest-to-goodness military
surplus stuff.

"Surplus stores" may have existed before, but clearly they got a big
boost (or were created) after WWII where there was a shift from a massive
war footing to peacetime. There was indeed a lot of surplus, ie things
that were no longer needed by the military. There was a lot of stuff
and it was cheap, for the surplus dealers to grab up and hence for
the customer to guy.

That stuff lasted a long time. I was able to buy a brand new Command
Set transmitter for ten dollars in 1972, I seem to recall that it was
even in some packaging.

As time progresses, such large wars are a thing of the past. Yes,
there has been near constant war somewhere, but it is generally handled
by the usual level of equipment. There are no spikes, where suddenly
massive amounts of equipment need to be bought, and then nobody wants
it afterwards.

So there is much less surplus than there was as a result of WWII ending.

I suspect what there is, is increasingly bought up by other countries (within whatever rules there are about export), to be used by their armed forces. It's cheaper than buying new, but since it's a necessity they can outbid the surplus dealers that remain.

IN WWII, much of the equipment was pretty generic, give or take some cypher equipment. A radio receiver was a radio receiver, and a teletype machine was no different from a "civilian" version except maybe it was painted green.

I suspect more and more, military equipment is specialized. It has the cypher equipment built into the receiver, and that Teletype machine is now a computer, that may be built to certain specifications. Given that, they don't want that stuff to go out on the market, because they don't want everyone to have those capabilities. Hence I suspect there is much more that will be destroyed rather than put on the market.

Another fact likely rides on all of this. Surplus was once a relatively big thing. The stores were small, but I think they tended to be a bigger part of the culture. The neighborhoods where the stores were have changed, driving up rent prices and the owners have aged or even died. So no matter what surplus is still available, it's no longer distributed the same way.

I imagine that tunable loops (frames) should be pretty popular. These can also be used with portables (inductive coupling by sticking the portable right through the antenna frame). Apart from that, something like a Wellbrook active loop (I've been considering getting one but my bank account is still very skeptical [1] ;) should also be very usable. Some hard-core folks with *plenty* of space use beverages, of which you preferably should have 2 so you're not too much restricted direction wise. (A beverage is a fine directional antenna for MW and the lower tropical bands, but its dimensions...)

> If I can find the webpage..there is 1
> company that makes an "outboard" rotating ferrite rod of pretty good
> size.

This also sounds like it may be a viable option. Anyway, directionality (plus some means of changing direction) is usually far more important than pure signal strength on MW. Of course signal strength and sensitivity *are* interesting once you're looking for hard-core DX.

Stephan

[1] When you're young and foolish, you don't think about TCO issues and buy the best receiver you can still reasonably afford and no decenta ntenna. Well, I did buy an ARA-60 at the time, too, but did not have any possibility to put it up outside, so I merely got frustrated with all the interference caught by this omnidirectional thing. *sigh* Well, now there are the Wellbrook loops, but I'm currently having similar trouble with FM BCB antennas since I want something more directional than a mere dipole. *grmbl*

The only one I know of on the market now is the Sony XRF5100:
<http://www.durhamradio.com/s/customer/product.php?productid=45403&cat=1938&page=1>
or
<http://usa.shortwavestore.com/sony-shortwave-receivers.html>.

Being closer to Japan than I am, you might find more choices available
in your area.

I used to listen to a alternative music station on 1590, and then
crank the MHz knob on the r-1000 all the way to the end to get a good
white noise source. Then late one evening some ham decided to call
CQ on the 10 meter FM calling frequency, 29.6 MHz. Out of a sound sleep,
I found that slope detection works just fine on the R-1000's 12 kHz
filter...

I live on the west coast of the US. I have a DX-398 that is about 6 years old. Recently I changed my "world" time from London to New York, leaving my home time as Los Angeles. The trouble being that after I made the change, I got a completely different station list (I get DW, BBC --D--, RFI, etc.) I would like to know how to set this list back to its factory defaults.

I have tried:

* setting "world" time back to London
* using the "reset" feature
* Taking out the batteries

I would like to know what else I can do.

Thanks in advance for any help you can provide.

Actually, I think there's more to it. Take Fair Radio Sales as an example. I spent an afternoon just wandering around their floor, back room and warehouses.

From talking to them it sounds like they buy stuff in HUGE lots. The surplus market is dominated by companies that do that now, despite laws trying to make it easier for people -- individuals -- to bid on surplus.

But anyway, once they get that surplus, 1) it's often in terrible shape and may take 3 or 4 radios to produce one marginally workinig one, and 2) there's often classified stuff in there (whether it NEEDS to be classified is irrelevent) that must be destroyed. And they do. You hear about wonderous radios -- just great radios, no crypto or anything like that -- that end up being run over with bulldozers, because they're classified.

Bureaucracy in action...

Note: when i made the change, I set the radio to display New York time,
I have since set it back to displaying Los Angeles time. Also,
"Factory Default" in this case refers having frequencies listed by
country (e.g. Austria, Canada, France, etc.)

They lost the licensed tower in an aircraft collision late last year. They
are running an existing
auxiliary tower in a nonconforming operation at half-power until such time
as the
half-waver can be rebuilt at the current site or a new site found. The
auxiliary tower, which was put into use within a couple of hours of the
aircraft tragedy, can not handle full power as it is very short.

Getting permits to rebuild the tower may take many more months. During this
time, KFI is running 25 kw. It is not necessary to re-license a station for
a bona fide emergency operation.

The tower can not immediately be rebuilt as it qualifies as a totally new
structure, subject to today's codes and regulations, not those in effect
when the old tower was built in 1947.

A number of area broadcast engineers or engineering departments have
"souvenirs" of the old tower. We have a piece of ATU insulation, a shard
from the beacon and a piece of an insulator, as well as some paint flakes in
both white and orange. .

According to the manual, you can not change the preset shortwave stations stored in your receiver memory. You can however, store programmed memory into the blank spaces in your memory pages.

If you set your radio to Page 1, position 1, you should see Australia and a freq of 5.995

To do this, hold down the "page" button until the page number on the display begins to flash. Then use the up and down buttons to move to the page you want. Once you have the page you want, hit the enter key and your radio will be set to this page and freq.

Example: Hit SW, HOLD PAGE until page number flashes, use up arrows to move to page 7, then hit enter. Now the page numbe ris not flashing, so hit the #3 on your touchpad and you will be on a freq of 9745 in the 31m band.

http://support.radioshack.com//support_tutorials/communications/swave-0.htm

The above website can give you more information and a toll free number to call if you have misplaced your DX398 manual.

Yes, I had forgotten the fact that the tower had been toppled a while back.

Wasn't there some question at the time as to whether they could actually rebuild on that same site?

Unfortunately I am no longer able to hear KFI here due to a local on the frequency, though I do have them QSL'd (one of my very few MW QSL's).

I think I will call the local to inquire as to when they might be down for maintenance.

If you don't use FM a lot consider replacing the 15 kHz 9 mhz pre filter
FL23 with a 6 khz filter.
This filter is about 2/3 of the way back just left of center on the main
board. It looks like a crystal with 3 legs.
You can get it from ICOM for $18.00 plus shipping.
It is 9M6A1 FL-116 6kHz BW: part number 201 0000 950.
You do have to lift the main board to replace it but it isn't that hard
to do.
Also check out Kiwa (http://www.kiwa.com/) He has a 3.8 khz filter module.

My old SONY receiver islooking grungy,
and I'd like to clean the case.

The last time I tried (on a different radio)
I used Windex, and I smeared lots of the lettering.

What would clean the case, yet not affect
any of the lettering on the case ??

Don't use window cleaner (you learned that!).

If I need to clean anything like that I generally use Fantastik, and have not had a problem.

When KDKA's tower was knocked down in a storm in 1995 they decided to
cut it up and sell it as souvenirs. I have a round piece of it, frozen
in lucite. The tower dated back to 1920 and was the world's first
commercial radio tower. I can't remember how much it cost, but the cost
was a donation to the Children's Hospital of Pittsburgh.

Hello RJ,

I keep my radios (as well as all my other elctronic equipment) covered when not in use so they rarely, if ever, need any exterior cleaning. My wife makes the covers. She just LOVES to do that ;-)

That said, I did clean my Hitachi KH-1108S AM/FM/SW portable radio (bought in 1969) a couple of years ago. I used a slightly damp cloth and soap. I was extremely careful and went very slowly. On the serrations of the knobs, I used an old toothbrush and toothpaste. Of course I rinsed off the soap, again with a very slightly damp cloth. None of the lettering (ot anything else) was affected at all.

The radio came out looking like new. The trick is to take your time. Go VERY slowly. Do NOT use "chemical" cleaners other than soap or toothpaste (which, of course, is a soap).

I hope that helps you.

Best,

Joe

1705. Serial Number Importance for Sony ICF-2010 'portable' AM/FM/AIR Shortwave Radio

RadioLove,
.
My Sony ICF-2010 'portable' AM/FM/AIR Shortwave Radio
has a Serial Number of 357,363 and these were produced
in the last year or so of production.
.
I bought my Sony ICF-2010 Radio new-in-the-box from
J&R Electronics in September 2002.
.
My Sony ICF-2010 Radio is marked "Made in Japan" [.]
And all the Documentation is marked "Made in Japan" [.]
.
IMHO - The newer (Higher Serial Number) Sony ICF-2010
Radio that you can buy the better change of getting a
Radio in 'good' to "Very Good" over-all Condition.
.
hope this helps ~ RHF
.
.

Toothpaste can dull shiny surfaces and mar
clear plastic windows.
Cigetrette ash does a very good job when mashed
into a fine paste. It can even be used to resurface
CD or DVD disks with pretty bad scratches.
It is about the only good use for cigerettes that I
can think of. When I worked with a bunch of smokers
I gathered several 35mm plastic film canisters of
crushed cigerette ashe. Veryhandy to have around.

I think the main part of the reason - not all of it - is this:

There are many reasons we eventually won WWII. The one least
discussed or understood is possibly the single most important one: We
OUT-SUPPLIED the Axis to death! We had, in effect, zero war production

on Dec 8, 1941. In a superhuman effort, we had tied all axis countries combined by late 1943, and in 1944/early 45, we *really* took off. Remember, even the big brass thought we would have to invade mainland Japan to end the war, and that would have been a *massive* undertaking. Supplies were manufactured with that in mind.

Then, suddenly, it was over, and untold millions of tons of rapidly obsolescing equipment was left. Consider thousands of surplus stores all over the USA, and the governmet "attic" kept them supplied until it all ran out (something like 20 years or more). By that time, they'd changed the rules, and actual war material production was a fraction of what it was in 1945, and you are left with what passes for "surplus" stores today.

As I said, that's not all of it, but it's a lot of it.

Tony

Almost certainly you have Radio Rebelde, which is the Big Monster on
5025 kHz.

Ethernet is actually a number of twisted-pairs. The most common format is CAT-5E which minimizes most crosstalk (especially near-end variety.) I think this will almost guarantee some harmonics being radiated.

However, UTP (unshielded twisted pair) cables can radiate *less* than shielded TP cables. The shield can act as an antenna. There is industrial stuff wrapped in aluminium that works more like coax or ladder-line.

How much it radiates is based on frequency, and CAT5E is rated to 350MHz, I think. EMI is actually a problem for these cables. It is recommended to not run stranded, unshielded UTP cable within 12in of an EMI source. At any rate, running data through 100baseTx apparently does not have a real noticeable spike in the noise -- the noise is spread out quite a bit.

And it's hard to filter EMI on ethernet. A ferrite at each connector end will not be as useful as on a 60Hz power line. Ethernet is something like 1v nicely round waveforms. I'm not sure there is even a line filter available for the frequencies that 100Base-T is expected to run at.

There are supposed to be filters and/or chokes on specific leads in switches and NICs, but I'm guessing that they may leave a lot to be desired. This will only minimize noise coupled to the +DC and GND lines from the power supply, I suppose.

The rules of thumb I've read are:

- keep your runs short as possible
- keep your turns no less than 10x the diameter of the cable
- get or make cables with really good connectors. You don't want any stretched or untwisted ends -- this is where a lot of the noise is.
- kinks crimps or stretch cables will generate a lot more EMI
- If you have a switch or hub of some sort, but it in a metal enclosure

When your S350 is tuned to 1697.666666666..., the local oscilator is
running at 2151.66666666....

RHC on 6000 kHz is mixing with the 2nd harmonic of the local oscillator
(which is at 4303.3333333...)

6000 - 4303.333333... = 1696.6666666...

It's a common problem with cheap portables.

moutt02@hotmail.com wrote in news:1110485044.128511.202680
@f14g2000cwb.googlegroups.com:

Sorry to hear your problem. According to the following link and quoted text, it is a common problem, and requires manually re-entering all the frequencies. (in the absence of a programming device).

"My radio locked up and reloaded completely different memories!
First, some background: Sangean has two versions of the 909. One version for the US (and Canada?) and another version everywhere else. All 909's have a mask ROM that is programmed with the radio's firmware, and a set of station memories for listeners in Europe and Asia.

European and Asian consumers get this model. US-bound radios undergo one more step before they're shipped: The radio is programmed with a selection of frequencies for listeners in the US, selected by the famous DXer Glenn Hauser.

Unfortunately, under certain conditions, the radio locks up in a mode where it expects to be programmed at the factory, and since no programming is forthcoming, it resets the memories to the original defaults stored in ROM.

According to one Sangean representative, this is a very common tech support issue with the radio, for which a few radios are actually returned for reprogramming.

Barring development of a third-party 909 reprogrammer, you'll have to either reenter your favorite frequencies manually or send it back to Sangean.

More information on the 909's memory system is available."

http://members.verizon.net/~vze20h45/radio/sangean/909tech.html#memloss

(The FAQ author has had his radio lock up on him no less than three times! But the radio still has all the memory presets it was purchased with. So it goes.)

The frequencies reset as follows, only a portion of the text is quoted:
"Before After

1.Australa DW
2.Austria SWF3
3.Canada BR
4.China DLF"

http://mysite.verizon.net/vze20h45/radio/sangean/909memory.html#circuit

The intended frequency list is available here: http://tinyurl.com/4s5rb if the link still works. This link is to an HTML rendition of the DX-398 Owners manual available at Radio Shack. At the top of the HTML page is a link to the PDF format if you prefer, or use this link: http://support.radioshack.com/support_electronics/doc66/66340.pdf

Good luck, and with patience you will soon have those frequencies re-entered.

Used a $29.95 radio Shack A.M. Loop antenna..
Worked very well, BTW..

Would " Null Out" stronger stations, leaving the signal you wanted..

There are many obstacles, including the city where the tower is located and
the nearby airport as well as fall zone rules, etc. Best guess a b&#65533;mong the
local engineering circle is 12 to 18 months, and the tower will probably
have to be strobed.
>
> Unfortunately I am no longer able to hear KFI here due to a local on the

Just 75 miles from the site, I hear the Cd Juarez and Parral, Mexico,
stations often on top of KFI. There is no such thing as a clear channel any
more.

The hospital got it wrong... and I have several of the Lucite-embedded
slices of steel.

In about 1928 or 1929 KDKA built the tower that came down in 1995. It
actually fell on the first try, and had to be rebuilt. There was an article,
including a cover picture, in an 1929 issue of Radio World. Interestingly,
they built a ring of 1/8 wave towers around the big tower with a curtain
hung from them to attempt to reduce low angle sky wave. I never saw a report
anywhere on whether this worked.

That can be remedied by adding a connecting wire between one of the 'AA'
battery compartment terminals (forgot which one) and the solder pad it
connects to. This will make a permanent connection that doesn't act up.

The earth happens to be (a coincidence) closest to the sun during winter
in the northern hemisphere. This means the ionosphere receives the most
radiation during daytime which makes it support propagation better,
especially the higher frequencies. The opposite happens in the northern
summer when the earth is farthest from the sun. This is why summer
propagation in the north is not so good in the daytime.
